Appendix 58, page 79

Notes:

- 1) Average Revenues are based on Manitoba Hydro's proposed April 1, 2010 Interim Rates
- 2) Marginal costs are in 2010 dollars and for the year 2010/11.
- 3) In the case of the GSM and GSL classes the marginal costs have not been adjusted to account for the fact that classes serviced at higher voltages will have lower/no distribution losses.
- 4) Distribution marginal costs are not attributed to classes served at greater than 30 kV – consistent with Appendix 58, page 79 where it is noted that classes receiving service at greater than 30 kV are excluded from the allocation of distribution plant costs.
- 5) The individual marginal cost components in CAC/MSOS/MH II-75 a) do not sum to the reported total.  
For purposes of the Table, the individual components are used along with their arithmetic total.

 2010/11 - 2.9% Residential Rate Increase per Order 18/10  
 Inflation - Appendix 51, page 5. All values are actual except 2010/11 which is a forecast

**Notes:** Inflation and Rate Index values are calculated by applying the noted increase for the year to the previous year's value. 2003/4 set at 100.0.  
 Compound Increases calculated by dividing the index value for the end year by the index value for the start year.  
 Compound Rate Increase over Inflation calculated by dividing the overall percentage increase in Rates by the overall percentage increase in Inflation.
