

Manitoba Hydro Undertaking #136

Manitoba Hydro to provide the energy rating for the revised Manitoba Building Code related to the Power Smart New Home Program.

Under the Power Smart New Home Program, a qualifying Power Smart Gold new home would achieve an energy rating of approximately 80.

In December 2010, the Province of Manitoba introduced a new Manitoba Building Code for homes which now includes a number of energy efficiency measures. Under this new code, a new home built in Manitoba is expected to achieve an average energy rating of approximately 78 assuming 1.6 air changes per hour (ACH).
