

ELECTRIC GENERAL RATE APPLICATION 2015**Manitoba Hydro Informal Undertaking #4**

How many of the capital construction EFTs are on term arrangements with the Corporation? (Under advisement)

Response:

Manitoba Hydro has approximately 450 term positions which can range in duration from months to years. Of the 450 positions, approximately 265 are for capital construction activities supporting Major New Generation & Transmission Projects, such as Keeyask and Bipole III. The majority of these positions are in the Major Capital Projects Business Unit. In addition, there are a further 75 capital construction positions which primarily support sustaining capital activities, but may be involved in Major New Generation and Transmission projects on periodic basis. The remaining term positions (approximately 110) are for operational activities.

As term positions range in duration from months to years, a position may not equate to an EFT.
