

ELECTRIC GENERAL RATE APPLICATION 2015**Manitoba Hydro Undertaking #28**

Manitoba Hydro to provide what the graph would look like if those savings became available for dependable energy.

Response:

The figures shown in the response to PUB/MH-I-59 already incorporate the DSM savings as being available for dependable energy.

Energy savings resulting from the DSM plan are applied to forecasted loads and input into the SPLASH simulation. Within the IFF horizon, the model will use the flexibility of the system to fit the majority of the energy savings into the form of long term export sales, which are priced at the forecasted long term dependable price. DSM energy savings not sold as dependable are either sold as opportunity or reduce fuel and power purchases.
