

ELECTRIC GENERAL RATE APPLICATION 2015**Informal Manitoba Hydro Undertaking #5**

How is the 50% DSM savings reduction apportioned (i.e. among firm exports, opportunity exports, etc.).

Response:

Over the scenario 20 year forecast horizon to 2034, a volume equivalent to more than 80% of the 50% DSM savings reduction in question was projected to be sold as long term dependable sales, with the remaining savings broken down between reductions in fuel and power purchases and additional opportunity sales.
