

Undertaking # 31

MPI to determine whether there are safety initiatives that might be implemented and describe what use the Corporation might make in designing safety initiatives, as well as provide a list of intersections designated as number 5s and number 4s.

RESPONSE:

The motorcycle intersection crash location map was originally prepared in response to CMMG (MPI) 2-2 and the Corporation has not had the opportunity to analyze it in targeting motorcycle road safety initiatives. However, the motorcycle crash locations are not significantly different from the listing of high collision intersections produced for all vehicles which have been widely shared to raise awareness of the crash frequencies at these intersections.

Intersection crash locations with 4 and 5 motorcycle-related collisions during the five-year period of 2008-2012 are:

Fermor Avenue & Lagimodiere Boulevard:	5 Crashes
Main Street & Portage Avenue:	4 Crashes
Bishop Grandin Boulevard & Waverley Street:	4 Crashes
