APPLICATION BY MANITOBA HYDRO FOR AN INTERIM EX PARTE ORDER APPROVING SURPLUS ENERGY PROGRAM RATES, SCHEDULE SEP-1

June 21, 2006 Order No. 96/06 Page 2 of 11

Introduction

By Order No. 90/00, The Public Utilities Board (Board) approved an application by Manitoba Hydro (MH) for a Surplus Energy Program (Program). A process was established providing for weekly Program rates to be published through a "Schedule SEP-1".

Pursuant to the Program and now longstanding practice:

- a) on June 20, 2006, MH filed an application for Interim Ex
 Parte approval of a revised Schedule SEP-1 (attached); and
- b) by this Order, the Board approves MH's application.

Background

The Program is a mechanism by which MH prices sales of electricity generated in excess of its immediate requirements. Average spot market prices are determined weekly using methodology previously approved by the Board.

The Program's objective is to provide access to electricity to Manitoba's larger commercial firms on an interruptible basis, with prices to be established similar to those offered to MH's "opportunity" export sales customers. The Program particularly benefits customers able to take advantage of lower price delivery periods.

Customers accept or decline electricity delivery at the prices made available. Customers are expected to and are responsible

June 21, 2006 Order No. 96/06 Page 3 of 11

for meeting the risk of service interruption with back-up facilities.

Program revenues result from sales at the prices established. Costs are allocated by MH; the Program is expected to break even on an annual basis.

Attached Appendix "A" depicts the variability of average spot market prices over the last four years, including the current year, with the average being determined using a Board approved methodology. Appendices "B", "C" and "D" report Program energy prices for medium general service as have been established for Peak, Shoulder and Off-Peak hours, over the same time period.

The peak time represents high demand hours, Monday to Friday, which vary between summer and winter. Off-peak is the nighttime period between 11 p.m. and 7 a.m. Shoulder time represents the remaining daily hours.

Peak and shoulder prices rose sharply during July, 2005.

With existence of the Ontario market the and the implementation of revised practices by the Midwest Independent Transmission System Operator (MISO) in April 2005, MH can now offer 100% of its surplus energy to these surrounding markets. In effect, MH has expanded its include Ontario and the entire MISO customer base to footprint. The MISO standard market gives MH the ability offer all surplus energy to the market to without transacting with specific counterparties. As no excess

June 21, 2006 Order No. 96/06 Page 4 of 11

capacity remains in the MH system during the peak and shoulder hours, SEP customers pay market rates.

- Furthermore, July is a month where load and subsequent energy demand are at their peak. July 2005 regional temperatures were significantly above average. Increases in load resulted in increased demand for energy, which in turn, caused energy prices to climb in the marketplace during this period.
- Finally, gas prices in the summer of 2005, on average were significantly higher than those experienced in the summer of 2004. This upward trend was continued due to hurricane Katrina which took some natural gas production out of service. The increase in gas prices causes an increase in power prices in peaking months with more gas fired generation at the margin during these periods

November showed an increase in off-peak rates compared to previous months.

- From June to October, MH experienced extremely high water conditions and was unable to export all surplus energy to the market due to transmission constraints within neighboring markets and low Manitoba load in the off-peak period.
- In the beginning of November 2005, MH's off-peak load increased and transmission constraints in the markets alleviated. The change in conditions resulted in an increase in export activity such that no surplus energy was available causing SEP customers to be charged market prices.

June 21, 2006 Order No. 96/06 Page 5 of 11

 November is typically used by market participants to perform maintenance on their generation units. Many base load generators in the market are off-line for repair during this period. When base load generators are out of service, the demand must be meet by more expensive (gasfired) generation which causes increases in the off-peak market prices.

Rates for the week of April 3 to 9, 2006 were notably lower than normal. Planned transmission outages in the United States resulted in MH having to reduce both its generation and transfer capability to the U.S. during that period, severely limiting its firm exports and reducing its opportunity exports to zero from all three categories. The resulting prices reflected MH's operating costs for hydraulic generation, and the resultant marginal opportunity cost of generation. Such outages are unusual, and not expected to recur except in unusual circumstances.

Overall market conditions, reflected in the Estimated Average Spot Market Rate, were lower in April, 2006 due to the milder weather.

Since its inception, the Program has sold over 22,000 GW hours per year of electricity to MH's medium and large customers, at "wholesale" market prices. Over the four-year period November 1, 2001 to October 31, 2005, MH reports Program Net Income of \$215,319 (\$53,830/year).

June 21, 2006 Order No. 96/06 Page 6 of 11

Board Findings

MH having made its latest Program sales prices application in accordance with agreed-upon practice, and the Program continuing to have value to a component of MH's customer base, the Board finds revised Schedule SEP -1 acceptable.

IT IS THEREFORE ORDERED THAT:

- Manitoba Hydro's application for approval of revised Schedule SEP-1, as attached, to be in effect from Monday, June 26, 2006 to July 2, 2006, BE AND IS HEREBY APPROVED on an Interim Ex Parte basis.
- This Interim Ex Parte Order shall be in full force and effect until confirmed or varied by a further Order of the Board following a public hearing.
