MANITOBA PUBLIC UTILITIES BOARD

Re: MANITOBA PUBLIC INSURANCE
2006 INSURANCE RATES

Before Board Panel:

- Graham Lane - Board Chairman
- Eric Jorgensen - Board Member
- Len Evans - Board Member

HELD AT:

Public Utilities Board

1 --- Upon commencing at 9:04 a.m.

2

3 THE CHAIRPERSON: Mr. Saranchuk, do you
4 want to remind everyone of the order of today?

5 MR. WALTER SARANCHUK: Yes. Board
6 Counsel will begin with closing remarks, and then we'll
7 follow the Intervenor's list as shown on the first page
8 of the procedural outline and then followed by MPI.

9 THE CHAIRPERSON: Mr. McCulloch, do you
10 have something?

11 MR. KEVIN MCCULLOCH: Yes, Mr. Chairman.
12 In the course of the Proceedings, there were a number of
13 -- of questions or issues raised by the Panel, and the
14 Corporation has put together responses. There were six
15 (6) items that were raised on Tuesday, October 11th, at
16 the commencement of the Proceedings, and nine (9) items
17 raised at the closing of Proceedings on the 12th of
18 October.

19 So, what you have before you is the
20 Corporation's response to those fifteen (15) items, and
21 since they are, in many cases, issues that will figure,
22 I'm sure, in closing argument, I think the Corporation's
23 position should be put on the record as an exhibit. By
24 my count it would be MPI Exhibit Number 33.

25 THE CHAIRPERSON: We agree. Thank you,

1 Mr. McCulloch.

2

3 --- EXHIBIT NO. MPI-33: Responses to six (6) items
4 raised on Tuesday, October
5 11th, and nine (9) items
6 raised on the 12th of
7 October.

8

9 THE CHAIRPERSON: Mr. Saranchuk...?

10

11 CLOSING ARGUMENTS BY MR. WALTER SARACHUK:

12 MR. WALTER SARANCHUK: Thank you, sir.
13 Good morning, Mr. Chairman, Members of the Board, ladies
14 and gentlemen.

15 We have now completed the evidentiary
16 component of the Public Hearing in respect of MPI's
17 Application to the Public Utilities Board for approval of
18 the Corporation's base rates and premiums charged for
19 compulsory vehicle and driver insurance; that is, its
20 rates for service for the 2006/07 insurance year, which
21 would take effect March 1st, 2006.

22 As Board Counsel, I take no position on
23 the merits of any part of the Application by MPI, or any
24 matters taken by any of the other parties. My role is
25 rather to summarize the matters that this Board may wish

1 to consider in this Proceeding.

2 MPI is seeking approval of rates which are
3 based on no overall change in revenue. They include
4 firstly, experience based rate adjustments ranging from
5 minus 15 percent to plus 15 percent, with the exception
6 of a 20 percent average increase for mopeds, or an
7 average of thirteen dollars (\$13) per moped and decreases
8 of up to 20 percent for trailers and off-road vehicles.

9 For all vehicles other than motorcycles,
10 trailers and off-road vehicles, classification offset
11 adjustments ranging from minus 5.2 percent to plus 11.08
12 percent, to achieve revenue neutrality from rate group
13 adjustments.

14 For motorcycles there's to be the creation
15 of a pleasure use category.

16 The combinations of all rate changes have
17 been capped at 20 percent, in compliance with the order
18 by this Board at last year's General Rate Application.

19 Driver's license premiums are to remain at
20 forty-five dollars (\$45). There's to be no change in
21 service and transaction fees, no change in permits and
22 certificate fees.

23 As well, there's to be no change in the
24 forty dollars (\$40) discount provided to customers with
25 VICC or Vehicle Information Council of Canada, approved

1 after market and manufacturer or dealer installed anti-
2 theft devices.

3 There's also to be the implementation of
4 an Immobilizer Incentive Program which includes an
5 application to waive the four dollars (\$4) administration
6 fee for the interest free loan component of the program.

7 Now, dealing with the rates for service.
8 In the application at hand the average rate adjustment
9 for each major vehicle class is as follows: Private
10 passenger vehicles will receive a .5 percent decrease,
11 commercial vehicles to receive a 9.2 percent increase,
12 public service vehicles a .7 percent increase,
13 motorcycles a 12.7 percent increase, trailers a 4.9
14 percent decrease and off-road vehicles a 20 percent
15 decrease for an overall zero rate change.

16 After considering insurance use and
17 territory, capping and balancing for experience rate
18 adjustments, the results are modelled to assess the
19 impact of various rate and classification changes so that
20 in 2006/07 4 percent of vehicle insurance rates will not
21 change, 38 percent will increase and 57 percent will
22 decrease.

23 Relative to the updated financial results,
24 the financial picture for 2004/05 and 2005/06 is as
25 follows. Dealing firstly with fiscal 2005, and that

1 information is reflected in TI13 which is in Volume II,
2 Part 2 or in Tab 3 of the Public Utilities Board book of
3 documents. For the 2004/05 fiscal year, the basic
4 insurance division of MPI recorded a net income of \$59.1
5 million; that compares with a forecasted net loss of \$9.3
6 million forecast last year, meaning an improvement of
7 \$68.4 million.

8 The change was attributable primarily to a
9 decrease in forecast claims incurred of over \$56.8
10 million as well as higher forecasted investment income of
11 \$12.2 million due primarily to additional earnings from
12 the equity portfolio.

13 So far as the fiscal 2006 year is
14 concerned, and that is reflected, that information is, in
15 TI14 in Volume II, Part 2, Tab 4 of the Public Utilities
16 Board book of documents. This is the current year we are
17 in and these figures represent the updated forecasts as
18 at September 28th, 2005.

19 MPI is currently forecasting to have a net
20 income of \$50.5 million, including costs of \$1.6 million
21 relating to the immobilizer strategy. This is compared
22 to a project net loss of \$5.7 million forecast in the
23 last general rate application making for a variance of
24 almost \$58 million.

25 The improved experience is attributable to

1 an increase in the investment income now forecast to be
2 \$118.2 million, which is an improvement of over \$46.6
3 million from the projection last year.

4 Dealing now with the fiscal 2007 projected
5 operating results as updated to September 28th, 2005.
6 The Corporation's financial statements for the 2006/07
7 fiscal year are shown in TI15 and TI17 in Volume II, Part
8 2 of the application; that would be tab -- tabs 5 and 7
9 in the Public Utilities Board book of documents.

10 A net income of \$2.7 million is projected
11 for fiscal 2007 after a \$1.8 million transfer to the
12 Immobilizer Incentive Fund. Total earned revenues are
13 currently projected to be \$659.5 million compared to
14 \$632.7 million last year.

15 Compared to use of a 3.5 percent last
16 year, this year's application assumes a 3 percent vehicle
17 upgrade factor for 2006/07; that's the factor reflecting
18 the renewal of the vehicle fleet through customer
19 disposal of older units and purchase of newer units.

20 However, like last year's application,
21 this year's application assumes a 1.5 percent volume
22 factor; that's to represent the growth in the number of
23 vehicles insured.

24 Service fees are expected to be \$15.3
25 million for 2006/07, which is an increase from \$13.9

1 million forecast last year.

2 Claims costs, claims and road safety, loss
3 prevention expenses, are expected to increase to \$638.8
4 million, compared to \$609.3 million in 2005/06.

5 Compared to the 2005/06 forecast, claims
6 incurred is projected to increase by over \$24.5 million.

7 Other expenses at \$95.8 million are
8 projected to increase by \$4.7 million in 2006/07,
9 compared to 2005/06. And operating expenses themselves
10 are projected to increase by \$2.6 million.

11 Included in road safety costs are \$1.8
12 million in expenditures related to the Immobilizer
13 Incentive Program, which I will refer to later.

14 The projected underwriting loss of -- for
15 2006/07 is \$75.1 million, while investment income is
16 forecast to be \$77.8 million. The result is that,
17 overall, the basic insurance program is expected to have
18 a net income of \$4.5 million.

19 Now dealing with the RSR, or the Rate
20 Stabilization Reserve, the stated purpose of which is to
21 protect motorists from rate increases made necessary by
22 unexpected events and losses arising from non-recurring
23 events or factors.

24 The Application, as filed, projects the
25 balance of the basic RSR, in millions of dollars, as

1 follows.

2 For -- oh, the reference by the way is
3 TI.17, page 14, as revised on September 28th, 2005 and
4 that's in Tab 7 of the Public Utilities Board Book of
5 Documents.

6 At the end of 2005 fiscal year there's a
7 projection, or there was, of \$135.7 million balance in
8 the basic RSR.

9 For 2006 there's a -- a forecast of \$205.6
10 million, including consideration of the \$40 million in
11 the Immobilizer Incentive Fund transfer.

12 For fiscal 2007 is a projection of \$227.2
13 million, including consideration of the \$40 million in
14 the IIF.

15 For fiscal 2008 the projection is \$230.2
16 million, including consideration of the IIF.

17 For fiscal 2009, \$237.3 million including
18 the IIF.

19 And for 2010 the projection is \$244.6
20 million, including consideration of the IIF.

21 At the end of fiscal 2004/05 the RSR, as I
22 mentioned, was \$135.7 million after a net income of \$59.1
23 million and a transfer of totalling \$29.6 million from
24 SRE and \$4.3 million from extension.

25 It can be said that in the bank, so to

1 speak, at this time, there's approximately \$155 million
2 in the basic RSR, taking into account the \$135.7 million
3 balance as at February 28th, 2005 and the total of
4 approximately \$20 million in SRE and extension transfers
5 made on March 1st of this year.

6 For fiscal 2005/06 the Corporation
7 forecasts a basic RSR to be \$167.3 million after a
8 reallocation of \$40 million for the IIF, a \$50.5 million
9 net income, and an \$8.4 million transfer from SRE and \$11
10 million from extension. The latter transfers totalling
11 approximately \$20 million, as made effective March 1st,
12 this year.

13 For fiscal 2006/07, being the year of this
14 Application, the RSR is projected to be \$227.2 million
15 including the IIF appropriation, well in excess of a top
16 end of the Board's RSR range for rate setting purposes.

17 Dealing with the RSR target the Public
18 Utilities Board RSR target is 50 million to \$80 million
19 for rate setting purposes. This range was established
20 based on the Board's accepted methodology risk analysis.

21 We have heard evidence from Mr. John Todd,
22 CAC/MSOS' witness, that adjusted for inflation the range
23 would be in the order of 55 million to \$90 million. The
24 Corporation has indicated that the MPI Board's approved
25 RSR range of \$80 million to \$100 million has changed this

1 year.

2 The Corporation has adopted the minimum
3 capital test, the acronym for which is the MCT, in
4 establishing the RSR range. The MCT test is a solvency
5 test utilized by private insurance companies which are
6 regulated by the Office of the Superintendent of
7 Financial Institutions, the acronym for which is OSFI, O-
8 S-F-I.

9 MPI has indicated that the test in an
10 industry best practice that that is the test that it
11 reflects the industry best practice, but, as well, the
12 Corporation has indicated that it is not subject to OSFI
13 regulation.

14 MPI's RSR target is now being based on a
15 range of 50 percent of the minimum capital test to 100
16 percent MCT which results in a range of \$107 million to
17 \$214 million, based on the new methodology. This
18 reflects a significant increase in the range of the
19 Corporation and is in response to increased risks which
20 MPI cited to be as follows.

21 Firstly, higher retentions taken on the
22 casualty and catastrophe reinsurance programs. Secondly,
23 the growth in the unpaid claims provision. And thirdly,
24 the size of the investment portfolio and the variability
25 that may result from mark-to-market accounting.

1 Dealing with the RSR rebuilding plan, the
2 Corporation remains committed to its policy of using
3 retained earnings from the Corporation's competitive
4 lines of business that are in excess of their target.

5 For the time being the Corporation intends
6 to rebuild the RSR by transferring to the basic RSR
7 retained earnings from the competitive lines that are in
8 excess of their approved target levels which were
9 recently changed and are now \$37 million for SRE or
10 special risk extension, and \$35 million for the extension
11 line.

12 The business plans and the forecasts for
13 the competitive lines are not available for the Board to
14 review. The PUB's jurisdiction and regulatory mandate
15 being limited to MPI's basic insurance business.

16 It should be noted, however, that since
17 2003/04, that is over the last two (2) years, in excess
18 of \$115 million in rebuilding of the basic RSR resulted
19 from the positive operating results of the basic
20 insurance division.

21 Now, moving on to the Immobilizer
22 Incentive Fund created by the Corporation to combat auto
23 theft. The Corporation has put in place a program to
24 support the purchase and installation of approved vehicle
25 immobilizers through subsidizing half the purchase price

1 of the device as well as offering interest free financing
2 for the balance of the cost over a five (5) year period.

3 To fund the program MPI has allocated \$40
4 million from basic RSR to a separate reserve fund called
5 the Immobilizer Incentive Fund, or IIF, a separate
6 component of basic retained earnings.

7 What the Board must consider is whether
8 the appropriation of the RSR funds is consistent with the
9 stated purpose of the RSR which, as mentioned, is
10 intended to protect motorists from rate increases made
11 necessary by unexpected events and losses arising from
12 non-recurring events or factors.

13 MPI proposes to offset the impact on the
14 RSR of the incentive program expenditures over the term
15 of the program. MPI has indicated that it anticipates
16 realizing cumulative benefits of over \$79 million from
17 2005/06 to 2012/13 as well as incurring costs of over \$32
18 million for a net benefit of approximately \$47 million.

19 MPI indicated that the program is
20 voluntary and expressed caution as to achieving the
21 projected results. In brief, MPI defrays 50 percent or
22 one hundred and forty dollars (\$140) of the two hundred
23 and eighty dollars (\$280) cost per immobilizer and gives
24 an interest free loan for the one hundred and forty
25 dollars (\$140) balance to be paid over five (5) years.

1 That twenty-eight dollar (\$28) annual
2 purchase cost to the motorist is offset by an annual
3 forty dollars (\$40) premium reduction.

4 MPI indicated that the projected benefits
5 are based on fairly optimistic -- optimistic projections
6 with respect to the reduction in theft, and a very
7 healthy conversion of the most theft prone vehicles
8 entering the program.

9 The Corporation has chosen to expense the
10 annual costs of the program as incurred, rather than an
11 alternative accounting treatment of deferring and
12 amortizing the expenditures -- or sorry, deferring and
13 amortizing the expenditures over the estimated future
14 benefits.

15 Now dealing with the transfer of the DVL
16 or the Driver's Vehicle Licensing Department to MPI. The
17 Board heard evidence on the finalization of the agreement
18 between the Corporation and the Provincial Government in
19 that respect. The Corporation has indicated that the DVL
20 will be operated as a fourth line of business under its
21 Extension Division.

22 The Corporation has indicated that the
23 previous commission cost sharing arrangement, which
24 provided \$5.7 million to basic, but was cancelled last
25 year, had not been restored.

1 The commission funding arrangement had
2 previously been factored into the determination of basic
3 insurance rates. Last year the Board took that
4 deficiency into account in its Order, reducing rates for
5 all major classes.

6 The Board was provided with a copy of the
7 Funding Agreement, which is set out incidentally, in
8 AI.15, in Volume III, Part II, and a forecast of future
9 costs for operating DVL in the Corporation's response to
10 the Public Utilities Board Interrogatory Number 34(b) in
11 the first round. That's the attachment in that response
12 and appears in Tab 24 of the Board's Book of Documents.

13 The agreement provides for \$20.9 million
14 annually to be paid by the Provincial Government to fund
15 the operations of DVL. The forecast DVL operating
16 results indicate that such funding is not sufficient,
17 given the projected costs of operating DVL.

18 Again, the reference is PUB-MPI-1-34(b),
19 the attachment in Tab 34.

20 The Corporation is forecasting DVL
21 operating costs at a loss of \$4.5 million in 2005/06,
22 \$5.9 million in 2006/07, \$8.2 million in 2007/08, \$10.5
23 million in 2008/09, and \$12.9 million in 2009/10.

24 In total, the Corporation has indicated a
25 cumulative deficit of over \$42 million over the next five

1 (5) years for DVL operations.

2 The Corporation has indicated, however,
3 that the forecast represented the worst case scenario,
4 and the Corporation expects improvement will result from
5 actions flowing from a business process review, or BPR,
6 currently underway.

7 Another matter that came before the Board,
8 and which evidence was adduced, dealt with motorcycle
9 rates. MPI's application for motorcycle premiums for
10 2006/07 is underpinned by the claims forecasting and rate
11 setting methodology, which MPI submits remains unchanged
12 from last year. In this regard, the treatment for
13 motorcycles is the same as for other major uses.

14 In previous Applications MPI determined
15 individual motorcycle premiums by applying overall
16 experience adjustments.

17 In the past number of years, the required
18 average increase was well in excess of 30 percent. And
19 the adjustments were capped at last year's Application by
20 the Board, at plus or minus 20 percent, on an overall
21 basis.

22 This year MPI has stated that the premiums
23 for rate groups for the highest declared bike values, are
24 at or very near required levels. The premiums necessary
25 to cover the projected increase in claims costs are being

1 recovered by rate group relativity adjustments.

2 The result is that bikes in the lower rate
3 groups will see relatively high average premium
4 increases, while the highest rate groups will experience
5 premium decreases or no change at all. That's based on
6 an overall fleet of eight thousand one hundred and two
7 (8,102) insured units that were used in that analysis.

8 MPI has indicated that, in this
9 application, motorcycle rates will increase by 12.7
10 percent overall. As directed by the Board in Order 148
11 of '04, MPI has introduced a motorcycle pleasure rate
12 group.

13 MPI indicated that, previously, the
14 motorcycle rate was a blend between the pleasure and all
15 purpose. In setting up a pleasure use, MPI has adjusted
16 pleasure rates to be 6.54 percent lower than the blended
17 rate and the new all purpose rate to be 3.84 percent
18 higher than that blended rate.

19 Also, in response to Order 148/'04, MPI is
20 undertaking an exercise to refine its categorization of
21 sport bikes. Further, following the loss transfer
22 hearing this spring, in its Order 97 of '05, this Board
23 directed MPI to adopt a new claims cost attribution
24 methodology.

25 The Corporation has indicated that the

1 impact of this change will result in a reduction in the
2 indicated claims experience for motorcycles and scooters
3 but that will be offset by their current inadequacy in
4 rates.

5 Dealing briefly with the topic of claims
6 incurred, with the reference being TI.6 in Volume II,
7 Part 2 and Tab 2 of the PUB's book of documents. Net
8 claims incurred relative to the revised forecast were as
9 follows.

10 In terms of the personal injury protection
11 plan or PIPP costs, the forecast for the insurance year
12 2006/07 is that they will amount to approximately \$223
13 million; that's to be compared with the actual result of
14 \$199.7 million in 2003, for a difference between those
15 two (2) years of some \$23.3 million, or an 8 percent
16 increase.

17 In terms of collision costs, the 2007
18 forecast pegs them at \$220.6 million with the result in
19 2003 having been \$185.3 million for a difference of \$35.2
20 million or a 19 percent increase.

21 In terms of comprehensive costs the
22 forecast for 2007 is that they will be in the order of
23 \$72.5 million, compared to the 2003 actual result of some
24 \$50.5 million, making for a \$22 million difference or a
25 44 percent increase; that's with respect to

1 comprehensive.

2 Under the property damage cover for 2007
3 the forecast is that they will be in the order of \$32.4
4 million. While in 2003 the actual costs were \$29.4
5 million, for a difference of \$3 million or a 10 percent
6 increase.

7 The total claims incurred costs for 2007
8 are forecast at \$555.9 million, compared to the actual of
9 some \$467.7 million in 2003. They have therefore
10 increased by some \$88.2 million or 19 percent since
11 2002/03.

12 Dealing now with MPI's investment income
13 and its investment portfolio, a most important component
14 in setting rates is investment income, given that it has
15 a huge impact on net operating results after the
16 Corporation's underwriting component.

17 The size of the investment portfolio is
18 forecast to be almost \$1.9 billion in 2006/07. MPI's
19 total investment income is forecast to be \$88.2 million,
20 of which \$77.8 million or 88.28 percent is attributable
21 to basic, as indicated in the revised TI21 at Tab 9 of
22 the Board's book of documents.

23 The mix of the portfolio is expected to be
24 over 77 percent in long-term bonds and just over 21
25 percent in equity investments.

1 At AI.16, which is found in Volume III,
2 Part 2, the Corporation filed its investment policy,
3 which includes a strategy of booking at least \$5 million
4 in gains on fixed income instruments, and to realize
5 gains on the investment portfolio when the total of both
6 the US and Canadian Equity portfolio's fair market value
7 exceeds 105 percent of the book value of the combined
8 portfolio.

9 As at June 30th, 2005 the Corporation had
10 realized gains of over \$109.2 million. The Corporation
11 advised that future mark-to-market financial reporting
12 requirements will require a recognition of these gains on
13 the balance sheet. But the Corporation has indicated
14 that such adjustments will have no bearing on rate
15 setting.

16 Now there are three (3) additional issues
17 that I want to deal briefly with, Mr. Chairman, and Panel
18 Members. So the first deals with the topic of the
19 overall financial wellness of the Corporation.

20 Until now the Board has found
21 consideration of the MCT, or Minimum Capital Test, to be
22 of no direct relevance in establishing the RSR Target for
23 rate setting purposes. It has relied on the results of
24 the combined operational and investment risk analysis as
25 the Board's approved methodology.

1 Whether the evidence adduced at this
2 Hearing will lead to a change in that approach, in terms
3 of the weight and preponderance of evidence put forth by
4 the Corporation, is a consideration for the Board to
5 ponder.

6 What the Board has said in the past in
7 dealing with the RSR Target, however, is that it will
8 consider the overall financial wellness of the
9 Corporation. And to that end, the Board has no
10 jurisdiction outside of MPI's basic compulsory automobile
11 insurance plan.

12 However, it is a fact that MPI's overall
13 total retained earnings, from all of its divisions of
14 operation, are in the order of \$300 million at this time.

15 Another topic that I wish to touch on
16 briefly is the Manitoba Auto Theft Suppression
17 Initiative, or the acronym MATSI, M-A-T-S-I. This is an
18 auto theft suppression program focussed on the City of
19 Winnipeg, so it is now known as the Winnipeg Auto Theft
20 Suppression Strategy, funded at a cost of nine hundred
21 thousand dollars (\$900,000) annually for two (2) years.
22 It was announced in April of this year by the Minister of
23 Justice, MPI and the Winnipeg Police Service jointly.

24 The initiative categorize -- categorizes
25 chronic young offenders convicted of auto theft and has

1 been closely monitored through enforcement of Court
2 ordered curfews and access to rehabilitation programs.

3 MPI funds the probation services component
4 with leadership by its newly appointed director of auto
5 theft prevention.

6 Early results have indicated, apparently,
7 that Winnipeg car thefts are down by some 14 percent to
8 date, compared to last year.

9 Finally, I wish to touch on the topic of
10 MPI's business process review, or the BPR. This is an
11 intensive review being undertaken that will centre in --
12 on DVL operations. It will extend, however, to other
13 parts of the Corporation's operations because of an
14 overlap of some of the services; IT or Information
15 Technology, for example.

16 Another area to be impacted will be MPI's
17 bonus/malus system and its many components such as the
18 Merit Discount Plan, driver license surcharges for
19 convictions, and at fault accidents.

20 By the way, Ms. Reporter, malus is spelled
21 M-A-L-U-S.

22 The scope and timing of the BPR is likely
23 to be determined by the end of this fiscal year, but it
24 is to be a corporate wide review. The Corporation's
25 response to PUB-MPI Number -- Interrogatory Number 19 in

1 the second round, which is at Tab 40 of the PUB's Book of
2 Documents, sets out the budget for the total capital
3 expenditure, relative to the BPR, at approximately \$20
4 million, with \$2.6 million targeted for 2005/06, that's
5 this year.

6 The Board will undoubtedly be looking with
7 eager anticipation to being updated on the progress of
8 that initiative.

9 That's a review of some of the major
10 issues arising from this Hearing, Mr. Chairman. I wish
11 to thank the Board for its indulgence and the Intervenors
12 for their participation.

13 Last but not least, I wish to thank MPI's
14 counsel and witnesses for their cooperation throughout.
15 Thank you.

16 THE CHAIRPERSON: Thank you, Mr.
17 Saranchuk. We'll move now to Consumers Association of
18 Canada Manitoba Inc., Manitoba Society of Seniors.

19 Mr. Williams...?
20

21 CLOSING ARGUMENTS BY MR. BYRON WILLIAMS:

22 MR. BYRON WILLIAMS: Thank you and good
23 morning, Mr. Chairman, and members of the Panel.

24 I can indicate that amongst my fan club
25 here today is Ms. Desorcy, again, who is executive

1 director of the Consumers Association. Ms. Hunter, I've
2 got her name right now after working for her for over a
3 year, is at a hearing in Ottawa -- or at a meeting in
4 Ottawa and is unable to attend.

5 But I want to assure the Panel that both
6 Ms. Hunter and Ms. Desorcy beat me up for about two and a
7 half (2 1/2) hours last Friday in terms of
8 recommendations and the advice that I was giving them in
9 terms of this proposal. These recommendations reflect
10 the views both of CAC and MSOS.

11 Just by way of brief overview, in terms of
12 the topics that I'll be presenting on behalf of CAC/MSOS,
13 there's about seven (7) topics that we'll cover. First
14 of all, we'll address the issues relating to the rate
15 stabilization reserve, including the treatment of the
16 IIF.

17 Then we'll move to issues relating to loss
18 prevention. The IIP as well as WATSS which Mr. Saranchuk
19 just recently referenced, W-A-T-S-S. We'll segue,
20 hopefully cleverly, from that to road safety, and then my
21 client will also present, through me, comments and brief
22 recommendations in terms of DVL investment policy, the
23 volume factor methodology and pay-as-you-drive.

24 Mr. Chairman, this is just my proposal. I
25 note that I expect this to be a fairly lengthy

1 presentation. There will be twenty-two (22)
2 recommendations included. So Binder 1 is issues related
3 to the rate stabilization reserve, so when I'm finished
4 that that may be an appropriate time for the Board to --
5 to take a break.

6 Before getting into the rate stabilization
7 reserve I just want to highlight some of themes that are
8 -- that are going to be presented in the argument on
9 behalf of my client. And these themes were mentioned in
10 our opening statement and I think they've stayed true
11 through the course of the hearing.

12 We want to touch upon the unique, made in
13 Manitoba success story that is Manitoba Public Insurance.
14 We want to talk about the success of public insurance in
15 providing, through its basic insurance monopoly, an
16 insurance product that compares very favourably to that
17 offered by the private sector in terms of its rates and
18 in terms of its quality of service.

19 And in the course of that discussion we'll
20 also talk about the challenges faced by this Made in
21 Manitoba success story. And we're going to talk about
22 matters which may serve to weaken the ability of MPI to
23 provide a superior product at superior rates.

24 We'll talk about the RSR and MPI's attempt
25 to turn its back on a made-in-Manitoba risk analysis. A

1 risk analysis that was approved by the regulator after an
2 intensive, cooperative approach through numerous
3 regulatory hearings.

4 A process and an analysis which achieves a
5 carefully designed empirical analysis to determine an
6 appropriate level for the RSR. And in the course of this
7 discussion we'll talk about the efforts of MPI to replace
8 this risk analysis with a test designed by a different
9 regulator for a different purpose and for a different
10 competitive market.

11 And we'll demonstrate that the net result
12 of the MPI attempt to run and hide from the Board
13 approved risk analysis will be an RSR that is no longer
14 empirically based, no longer analytically driven.

15 An approach, in our view, that is
16 literally anchored in nothing, anchored in air. And this
17 lack of empirical analysis we will point was an enduring
18 theme throughout this argument. It's a troubling element
19 of a number of elements of the MPI application before
20 this Board.

21 We see it in its proposal regarding the
22 rate stabilization reserve. We see it in the
23 Corporation's approach to the Immobilizer Incentive
24 Program. We see it in the Corporation's approach to its
25 big three (3) road safety objectives. We see it in the

1 current situation of DVL.

2 We see it in the Corporation's approach to
3 volume upgrade forecasting and we hear it in the words of
4 MPI staff, the sad voices in the wilderness of their
5 strategic research department, who speak of resources
6 being allocated on the basis of emotional appeal, rather
7 than objective, empirical analysis.

8 A final theme that I -- that on behalf of
9 my clients I hope and expect will emerge, is the still to
10 be realized potential of this made in Manitoba success
11 story, in terms of achieving a minimal -- meaningful
12 impact, in terms of reducing the impact and severity of
13 auto accidents. The tragic economic and social
14 consequences of that.

15 And in that context, my clients will
16 applaud the leadership effort taken by MPI in terms of
17 some loss prevention initiatives such as WATSS. They
18 will decry the lack of analytical rigour in other loss
19 prevention initiatives such as the IIP.

20 And they'll point to mechanisms which have
21 come to our attention through the course of this Hearing,
22 which we hope will provide MPI with better tools in the
23 future to -- to mitigate the very severe and tragic
24 consequences of accidents upon Manitoba roads.

25 Turning directly to the RSR, there'll be

1 four (4) basic questions that -- or four (4) basic issues
2 that my clients have asked me to address under this
3 subject. The first will be risk analysis, and why they
4 believe that it's -- that this -- that this is the most
5 appropriate approach for this regulator in this
6 environment.

7 The second issue will be the MCT/MPI
8 approach, and we'll ask the three (3) basic questions
9 under that. First of all is MPI credible on matters
10 related to the RSR, secondly, does MPI truly believe in
11 the MCT, and third, is the MCT appropriate.

12 Another area that we'll canvass is the
13 experience of other Crowns, what makes them similar, what
14 makes them different from MPI in terms of their retained
15 earnings in the case of ICBC, or their Rate Stabilization
16 Reserve in the case of Saskatchewan.

17 Finally, we'll provide our client's views
18 and perspectives on the \$40 million appropriation from
19 retained earnings for the IIF.

20 In discussing the RSR, we would ask the
21 Board to reflect back to last Tuesday, October the 11th
22 and weigh carefully the evidence of Mr. Todd on this
23 subject, versus the evidence you heard from MPI
24 throughout the course of this Hearing.

25 We'd urge you to review the direct and

1 cross, it wasn't that lengthy, of Mr. Todd, and we think
2 you'll find it thorough, thoughtful and based upon a
3 careful reading of the RSR, and the intentions of the
4 Board, as expressed in previous decisions.

5 And we would urge you to contrast the
6 thoughtfulness of Mr. Todd's approach with the evidence
7 of the company, which of course in this case bears the
8 onus of overturning the Board approved methodology.

9 And we would respectfully suggest to you,
10 that after careful examination of the MPI approach,
11 you'll find that the Corporation is not wed to a
12 principle or to an analytical approach, they're wed to a
13 number, a higher number. They want a higher number, and
14 the MCT is providing a convenient excuse to achieve that
15 number.

16 And in particular, and I'll refer to this
17 later, we would urge you to read Mr. Saranchuk's very
18 insightful cross of MPI on Tuesday, October the 4th, in
19 particular page 324 when he asked the Corporation to
20 justify its target range. And we think that the
21 Corporation's frail efforts to justify that range, and to
22 answer Mr. Saranchuk's questions, merely underline the
23 expediency and lack of rigour that underlies their
24 approach in this issue.

25 And I note that I'm going on a bit at

1 length at this, but I want to underline this point,
2 because as I took the benefit of rereading Mr. Todd's
3 evidence, and considering the Board's lengthy
4 deliberations on this subject in the past, the constant
5 theme by the Board was about the attempts to justify this
6 number and the recognition that, when we're pre-
7 collecting from ratepayers something for some future
8 purpose, we should not be drawing these numbers out of
9 the air.

10 Those numbers should mean something. It's
11 not enough to say 15 percent of premiums written because
12 that doesn't really mean anything. A constant theme in
13 the Board's discussions in the late '90's, early 2000's,
14 what's the purpose of the RSR and how do we connect that
15 RSR target range with that purpose?

16 And, again, we'll recommend and think
17 you'll find that the risk analysis is the best way to
18 give some meaning to those numbers. And we think you'll
19 also find that while MPI purports to rely on the MCT
20 they're really going back to an approach that is drawing
21 numbers from the air.

22 In discussing the -- the risk analysis,
23 and I'm turning to that specifically now after that more
24 than lengthy preamble, we think it's important to
25 understand both the purpose of the RSR and the

1 environment in which MPI operates.

2 And in our respectful submission both of
3 these factors are critical and key in making the risk
4 analysis the right approach for the unique circumstances
5 of Manitoba Public Insurance. And, similarly, these
6 factors make the MCT the wrong approach.

7 And it's almost trite now, we've heard it
8 said so many times before what the purpose of the RSR is,
9 it's to provide protection from rate increases made
10 necessary by unexpected events and losses, non-recurring
11 events or factors.

12 And it's almost as trite, and in fact
13 probably more trite, to also notice -- note the
14 environment in which MPI operates; a monopoly in basic
15 auto insurance. And that, of course, is the critical
16 distinction between the companies which OSFI regulates
17 and the company that Manitoba Public Utility Board
18 regulates.

19 The companies that OSFI regulate operate
20 in a competitive environment. They're subject to
21 elasticities of demand. I'm very proud of my mastery of
22 that term. A 1 percent increase in prices will lead to a
23 less than 1 percent increase in rates.

24 If they have a big -- big pressure, if
25 they have a big loss, they cannot make up that loss

1 going -- we're going to collect from SRE an extension.
2 But, of course, we can't rely upon that, we can't even
3 look at the numbers and the projections from those
4 sources.

5 So we think it's important to note where
6 the -- the source of the funding from the RSR has come
7 from. And I believe Mr. Saranchuk alluded to that in
8 some of his statements.

9 So what we did, and there's an
10 Interrogatory that answers this question, CAC First Round
11 Interrogatory Number 3, we looked back to the days when
12 the Public Utilities Board, and MPI in particular,
13 started to get serious about the Rate Stabilization
14 Reserve in 1996 and '97. And you can do the calculations
15 yourself, but if you look over that time you'll see four
16 (4) main sources for the RSR.

17 One (1), is the intentional overpayment
18 via a surcharge, which amounted to about \$55 million in
19 the 1990s.

20 Second, is what you would call an
21 accidental overpayment, I guess, the variance between net
22 income and net losses. And over that period, again, you
23 can certainly check these figures when you compare the
24 losses to the -- to the positives, you'll see that MPI
25 has come out a \$150 million to the good.

1 There also have been, in recent years,
2 transfers from extension, about \$4.3 million. And again,
3 we know how closely tied the extension program is to the
4 basic program.

5 And finally, there have been very
6 meaningful transfers from special risk extension, in the
7 range of \$48 million.

8 So, we have seen in the past that the Rate
9 Stabilization Reserve has been funded from a variety of
10 sources, and we think that's a reasonable expectation for
11 the future as well.

12 Whatever the source, it's ratepayers'
13 money that we're -- that has been over collected in
14 advance for some future, unforeseen event.

15 Given that reality, it's important for
16 this Board to be able to justify what's the appropriate
17 amount, what's too much, what's too little. And that's
18 the point I was making earlier that the PUB had struggled
19 with over the past decade, let's not draw a number out of
20 the air, and that's how the PUB developed the risk
21 analysis.

22 The risk analysis itself, a proposal
23 originally made by MPI, but it was refined by the Public
24 Utilities Board, and the genius of it is that it builds
25 upon what MPI does best. At the heart of the risk

1 analysis are techniques that are central to the insurance
2 industry. That was the concept that my clients were
3 supportive of from the very start. And Mr. Todd put this
4 again very well in his evidence, I believe it's at page
5 917.

6 The basic method of the risk analysis are
7 the very -- the basic methodology of the risk analysis,
8 are the very core of what the company's all about,
9 assessing this.

10 And I'm sure MPI will try to characterize
11 this as something novel, but it's really not. Was it --
12 it looks at unforeseen costs, and unforeseen positive
13 variances as well, and it looks at their impact upon the
14 bottom line.

15 It says, what degree of confidence should
16 the Board have. Does it want a 95 degree confidence that
17 it has enough, or does it want a 97.5 degree confidence?

18 Put another way, what the risk analysis
19 does is it says, let's not draw the numbers out of the --
20 out of the air, let's not fear monger. Let's look at the
21 factors affecting net income, claims costs, claims
22 expenses, revenues, investment income. That's how they
23 operate in the real world, in the real made in Manitoba
24 MPI world. Some have a positive impact on net income,
25 some have a negative.

1 We -- just as one (1) example, when claims
2 costs tend to rise we also know that revenues are likely
3 going in the same direction, so they have an offsetting
4 affect.

5 And again, the risk analysis says, let's
6 consider the risk we're prepared to tolerate; a one (1)
7 in twenty (20) chance, a one (1) in forty (40) chance.

8 And this is all done within the context
9 that we're not a company in -- MPI's not a company in a
10 competitive market. We're not dealing with the risk of a
11 failure to pay claims, we're dealing with the risk of the
12 magnitude of a rate increase.

13 And just a last couple points about the
14 risk analysis. One (1) is that it's important to recall
15 that it's not etched in stone. There's a mechanism by
16 which it can be re-quantified, times change, good things
17 happen, bad things happen, and there's certainly a
18 methodology by which MPI could come before the Board and
19 revise its approach.

20 So, just in summary on the risk analysis,
21 and I'm leading to my first recommendation of my clients,
22 it's a made in Manitoba solution recognizing the strength
23 of the Crown monopoly. It's developed by an independent
24 regulator. It was made for a specific problem and
25 carefully tested and refined over time and it allows for

1 future flexibility.

2 At the heart of the approach is a
3 rejection of qualitative fearmongering and an effort to
4 seek a quantitative answer to how much of Manitobans'
5 money we should pre-collect.

6 My Client's first recommendation, and
7 there's twenty-one (21) to follow, is that the Public
8 Utilities Board re-confirm its current approach to
9 setting the RSR which is based upon a risk analysis
10 approach.

11 Well, why take the risk analysis? Why
12 take that made in Manitoba approach? Why not use the new
13 MPI target?

14 For purposes of context I just want to
15 underline for the point -- for the Board's -- just for
16 it's -- to remind it that what MPI is doing with its new
17 target, it's materially changing the numbers. It's going
18 from the lower end of its target and this is confirmed at
19 page 607 of the transcript, it's seeking a 34 percent
20 increase in its target at the lower range and a 114
21 percent in its target at the higher range.

22 This is a huge leap; 114 percent. And
23 it's a leap that has to be justified with something more
24 than conjecture and non-empirical fearmongering. When
25 you're asking yourself is the MCT/MPI approach

1 appropriated, the first question we'd ask you to consider
2 is MP -- is -- is MPI credible on this issue

3 Is it credible on matters related to the
4 rate stabilization reserve?

5 And we would suggest that in weighing the
6 credibility of MPI you take into account past practice of
7 this Corporation which we would suggest demonstrates a
8 much more flexible approach to the rate stabilization
9 reserve than the principled approach adopted by the
10 Public Utilities Board.

11 And we would remind the Board that just a
12 couple of years ago MPI was before this Board seeking to
13 budget for a loss, seeking to draw down, based upon
14 projected numbers, the RSR below the lower -- the lower
15 asset -- the ambit of the target range, below \$50 million
16 for the purposes of smoothing future rate increases.

17 And we suggest to you that that was not,
18 in those days, just a couple of years ago, the actions of
19 a Corporation that was truly worried about the RSR target
20 that it's proposing in the range of \$107 to \$214 million.
21 Just a couple of years ago MPI was saying it's okay if we
22 go below the bottom end of the Public Utility Board
23 target.

24 So, we would suggest to you that MPI's had
25 a very flexible approach; some might say an expedient

1 approach to the target level based upon its particular
2 circumstances in particular years and that's not an
3 approach, an expedient approach that we would recommend
4 to the Board.

5 We think that same extremely flexible
6 expedient approach has been demonstrated in this hearing
7 as well. And it can be seen just in simply looking at
8 the evidence -- the -- by Mr. Galenzoski's admission,
9 anecdotal evidence at page 317 of the transcript that it
10 initially adduced in support of the -- the higher rate
11 stabilization reserve target. And when you're reviewing
12 the transcript I'd refer you to the pre-filed testimony
13 of Mr. Galenzoski at page 4.

14 And. Mr. Saranchuk has talked about these
15 problems or these issues, but basically at page 4 of Mr.
16 Galenzoski's pre-filed evidence he talked about three (3)
17 major drivers they thought in support of a higher RSR.

18 The very first one they cite was a higher
19 retention on re-insurance. This very -- the second one
20 they cite is a higher retention on the insurance.

21 This very -- the second one they cite is -
22 - or another one cited is emerging mark-to-market
23 accounting rule regarding the investment portfolio.

24 And the third, of course, is the growth in
25 the IBNR.

1 And we think that the record of this
2 hearing demonstrates that MPI was overselling these --
3 these arguments right from the very start.

4 In terms of reinsurance, we think the best
5 evidence of that is a comment that Mr. Galenzoski made
6 about Saskatchewan. At page 654 of the transcript Mr.
7 Galenzoski was talking about the purpose for the RSR in
8 Saskatchewan and he said it's a little hard to determine
9 but one of the noted purposes is for -- to protect
10 against either catastrophes or casualties. The evidence
11 is a little unclear on that point.

12 And at page 654 of the transcript Mr.
13 Galenzoski said:

14 "If you say you need the RSR for
15 catastrophic events and then go out and
16 buy reinsurance for catastrophic
17 events..."

18 So, again, another stated reason for their
19 RSR is almost non-existent. And we think that's an
20 important point for two (2) reasons. One, it says if
21 there were other layers of protection available to
22 Manitoba ratepayers beside the RSR.

23 Also it said, at least if we apply by
24 analogy Mr. Galenzoski's comments from Saskatchewan to
25 his comments in Manitoba, maybe the reinsurance issue is

1 a bit more -- a bit less of an issue than MPI makes --
2 makes of it.

3 And just on that point as well, we also
4 would note, and that's -- this is from page 289 of the
5 transcript, when Mr. Galenzoski was talking about the
6 Corporation's approach to reinsurance he was saying that,
7 in other words, the expected costs of the program you
8 should be keeping within your own retention.

9 Again, point out the fact that the
10 reinsurance purchased by the Corporation is going for
11 unforeseen variances, and that's at page 289 of the
12 transcript.

13 So that's one example of what we would
14 suggest is a flexible approach to the RSR. Making a
15 bigger deal of reinsurance than MPI's own and candid
16 evidence in the course of the proceeding would -- would
17 lead us to believe now.

18 Another one is mark-to-marketing. And
19 remember this was -- I mis-spoke before, I said it was
20 the second reason cited by Mr. Galenzoski in his evidence
21 at page 4 of his pre-filed testimony. Of course, it was
22 the third one.

23 But in reading that evidence the
24 impression one might have garnered was that MPI had a
25 major concern with the impact of mark-to-market on its

1 rate stabilization reserve. Yet, we note, and that was
2 first set out as PUB 128, this statement was inserted in
3 Mr. Galenzoski's evidence before any evaluative impact of
4 the -- of the mark-to-market impact was -- was done by
5 the Corporation.

6 And we commend Mr. Galenzoski in terms of
7 his candour because in his discussion with Mr. Saranchuk,
8 and there's a number of examples of this in the
9 transcript, but at least on a number of occasions he
10 acknowledged that -- and I'll point to page 283 of the
11 transcript, that his thinking on mark-to-market basis has
12 changed.

13 And, in fact, he noted it should not -- at
14 page 283, that it should not be part of rating. And at
15 page 284 not part of the target level. And we, again,
16 commend him for his candour.

17 We note that similar comments are made at
18 page 184 of the transcripts and I'm not sure which
19 witness from the Corporation. We don't think it can be
20 taken into account, the RSR target or rate setting, and
21 I'm paraphrasing there, I'm not directly quoting.

22 We could go on. But the point is this, in
23 terms of the reasons cited by MPI in their initial
24 evidence, which subsequently were described as anecdotal,
25 we think they're overstated.

1 The last point to realize with these
2 risks, whether it's a risk to the IBNR, a risk to
3 investment, these are all foreseen through the risk
4 analysis. They can all be quantified. They can all be
5 made part of the risk analysis.

6 Reinsurance, Mr. Galenzoski admitted to
7 Mr. Saranchuk at page 292 of the transcript, that they do
8 retrospective modelling of different reinsurance
9 approaches all the time when they're dealing with
10 reinsurers.

11 These are all numbers that are capable of
12 quantitative analysis, inclusion in the risk analysis.
13 So in terms of whether MPI is credible of -- certainly
14 the individuals for MPI are principled individuals, but
15 their past track record and their record in terms of
16 their evidence in this hearing, we would suggest,
17 indicates some flexibility in terms of -- of the RSR and
18 we would suggest that they take an approach that is
19 driven more by the results in any particular year than
20 any longstanding commitment to a principled approach to
21 the RSR.

22 The second question on this subject we
23 would pose is: Does MPI really believe in the MCT?

24 And we would submit that's almost a
25 rhetorical question. If MPI did, if it really believed

1 in the MCT, if it really believed in the 150 percent
2 dictated by OSFI or even if it really believed in the 100
3 percent that it garnered through its 100 percent of the
4 MCT calculation, if it truly, fundamentally was attached
5 to a principled approach of that, why with an RSR of 135
6 million at the end of 2004/05, would it appropriate \$40
7 million for the IIF?

8 Why would it draw the IIF down so far if
9 it truly was fundamentally committed to these MCT
10 targets?

11 We again, and I noted this in my opening
12 comments, we'd ask you to contrast the MPI approach to
13 the -- to -- to the RSR with those of Mr. Todd and we
14 thought the most illustrative example of this was Mr.
15 Saranchuk's cross-examination of Mr. Galenzoski at pages
16 324 and 325 of the transcript.

17 The first question Mr. Saranchuk asked is:

18 "What was the rationale for choosing
19 100 percent target?"

20 And Mr. Galenzoski's answer was:

21 "The rationale for choosing 100 percent
22 is that the process automatically
23 calculates what the values would be at
24 100 percent.

25 And we felt..."

1 And I'm skipping a few lines, you can read
2 the whole quote at your leisure,

3 "And we felt that there would be
4 sufficient protection even in spite of
5 the fact that the DCAT analysis is
6 indicating an unsatisfactory result
7 could occur because of adverse
8 scenarios."

9 I think that's an important quote for a
10 variety of reasons.

11 If you truly believed in the MCT/DCAT
12 approach, if you really felt it was appropriate for the
13 purpose of the RSR, would you reject the advice of your -
14 - of your -- of the DCAT analysis?

15 It appears to us from this quote that the
16 100 percent figure was chosen, in large part, because
17 it's automatically calculated.

18 If you look at the words chosen by Mr.
19 Galenzoski, "we felt...we felt," and that appears again
20 at page 325. It's a level they feel comfortable with.

21 This isn't rigorous, empirical analysis.
22 This is drawing numbers out of the air.

23 And I don't have the page reference,
24 although I will draw it -- get it for the Board. There
25 was another response made by MPI in terms of why the 50

1 percent was chosen; the 50 percent, the hundred and seven
2 (107) figure.

3 And the answer was, it was selected to
4 ensure that there was some mechanism in place.

5 Not a number based upon any confidence
6 level, a fairly mechanistic exercise, one-half (1/2) of
7 the two fourteen (214).

8 So- in answer to our question, does MPI
9 really believe in the MCT, we'd suggest, respectfully,
10 that its allegiance to the MCT is anchored in air. It's
11 a frail, ephemeral allegiance.

12 It's really based upon a target that is
13 felt, rather than empirically derived.

14 Is the MCT appropriate for Manitoba?
15 Well, if we're going to take the PUB based upon past
16 decisions, the answer is no.

17 And it's on more than one (1) occasion,
18 the PUB has explicitly reject an OSFI-type approach for
19 the purposes of setting the RSR.

20 The basic ratio -- ratio of those
21 decisions, R-A-T-I-O, would appear to be that it sees it
22 as a solv -- a solvency test. A different test for a
23 different purpose.

24 In asking whether the MCT is an
25 appropriate test for MPI we'd note that it's designed by

1 a regulator which has no jurisdiction for -- over MPI,
2 which has no Crowns under its jurisdiction and has no
3 companies with a monopoly in basic insurance under its
4 jurisdiction. A very different competitive environment.

5

6 (BRIEF PAUSE)

7

8 MR. BYRON WILLIAMS: And I think the
9 evidence of John Todd on this point is very helpful. He
10 accepted that it was best practices for OSFI. In fact,
11 he went -- went farther than that and said it was
12 mandatory. Better than best practices.

13 But, again, he asked, for what purpose?
14 Is it appropriate for the purpose of the RSR?

15 At page 848 Mr. Todd said it's not
16 appropriate to use the MCT because there is no linkage
17 between it and the purpose of the RSR.

18 At page 923 he said, there are a lot of
19 things in there that aren't rela -- relevant to the
20 stabilization of rates. And at page 912 Mr. Todd
21 indicated the MCT was developed for a very specific
22 purpose, that is not the purpose of the RSR.

23 So, is the MCT appropriate? We would say,
24 no. The PUB has repeatedly and expressly rejected the
25 MCT. It's designed by a regulator with no experience

1 with Crown Corporations, basic insurance monopolies or
2 MPI, and it's a different test for a different purpose.

3 To use an analogy of Mr. Todd, it's like
4 using a training program for a sprinter when you're
5 running a marathon. It may be an excellent program but
6 it's for the wrong purpose.

7 And as Ms. McLaren conceded in discussions
8 with me, a test could be perfectly fair, perfectly
9 objective, it can be best practices for a particular
10 matter, but if it's testing the wrong thing then there's
11 no point. And that's at pages 658 and 659 of the
12 transcript.

13 Well, what about ICBC? Doesn't the fact
14 that the particular Crown in its particular circumstances
15 suggest -- use the MCT suggest that Manitoba Public
16 Insurance should be following that model?

17 And I would urge this Board to read very
18 carefully the record on ICBC. And you'll see that the
19 ICBC approach is not analogous to Manitoba Public
20 Insurance. Remember, back in 2001 ICBC actually had a
21 rate stabilization reserve. It's actually in its annual
22 report, actually in its financial statements; that
23 changed. That changed in 2002.

24 And that's acknowledged and it was Mr.
25 Galenzoski and I went through this discussion starting

1 around page 633 in the transcript.

2 If you read carefully through the ICBC
3 annual reports you'll see an acknowledgement that the
4 traditional role of a Crown with a government monopoly
5 had enabled it to have lower reserves.

6 But starting in 2003 there was a
7 direction, a mandate, given to ICBC to become more
8 competitive, to level the playing field for -- with
9 private competitors under the direction of the Campbell
10 government in British Columbia.

11 And Mr. Todd picked up on this theme. He
12 noted that the -- the mandate of ICBC is perhaps not
13 quite the same; not the lowest possible rates. He noted,
14 and this was also conceded by Mr. Galenzoski in cross-
15 examination, that the ICBC approach to using the MCT is
16 not determined by an independent regulator, it's directed
17 by government, by the Campbell government in Directive
18 IC2.

19 The Government told ICBC what level of
20 reserves it should have. Political direction, based upon
21 a desire to run the company on what the Campbell
22 government considered to be a more businesslike manner.
23 Not debated before an independent regulator, determine
24 directed by the Government.

25 Presumably directed as a discipline on the

1 operations of the company.

2 So to distinguish ICBC from Manitoba, I
3 think there's four (4) points the Board should recall.
4 One (1) is that it was via a Provincial directive, rather
5 than an independent regulator. Secondly, ICBC is now
6 using the term retained earnings, rather than RSR. And
7 third, is that -- that entire environment, levelling the
8 competitive playing field.

9 In terms of Saskatchewan, the status quo
10 in Saskatchewan, as we speak, is that the MCT applies to
11 the competitive side of the business, SGI Canada Inc.
12 There is what is called a Rate Stabilization Reserve on
13 the auto fund side, whether that continues in the future
14 is I guess a matter of discussion. Mr. Galenzoski
15 certainly has indicated, through informal discussions
16 with Saskatchewan, that they are looking at the MCT.

17 But it is important to also distinguish
18 between Saskatchewan and Manitoba Public Insurance. One
19 (1), and this is a point brought out by Mr. Galenzoski at
20 page 639 of the transcript. Saskatchewan, the auto fund,
21 doesn't have the type of regulation that we have in
22 Manitoba. It doesn't have a regulator as rigorous, or
23 arguably, and I'm putting -- I'm using my words here, not
24 his, as independent.

25 So what are the important points to recall

1 about Saskatchewan? First of all, it regards the -- SGI
2 Canada regards the MCT as a solvency test. Secondly,
3 that there is no substantive independent regulation.
4 Third, that the -- the SGI Canada -- excuse me, third,
5 that it's really not clear what Saskatchewan's doing with
6 its RSR. And Mr. Galenzoski make this point at page 649
7 of the transcript:

8 "It's hard to determine what they're
9 using this money for."

10 And fourth point is, he wasn't aware, and
11 nor am I of any canvassing of the MCT by the regulator in
12 Saskatchewan.

13 Another example of the MCT brought before
14 the Public Utilities Board was in terms of the Workers'
15 Compensation Board of Manitoba, and I would just note
16 that the Workers' Compensation Board, it's -- one (1) of
17 the questions is whether or not it has re-insurance. And
18 clearly that's a -- a critical factor which Mr.
19 Galenzoski has pointed to, certainly in terms of
20 Saskatchewan, that they do.

21 So we would -- we would ask Manitoba
22 Public Insurance, or this Board, to -- why one (1) would
23 reject a made in Manitoba, carefully crafted,
24 quantitative risk assessment, that directly addresses the
25 risk relevant to the RSR for the MCT, a test for -- from

1 a different regulator, for a different competitive
2 environment, not designed to address issues relevant to
3 the RSR -- not directly designed to.

4 So, and I've already made this
5 recommendation, but my clients would recommend keeping
6 the risk analysis and rejecting the MCT. They would also
7 recommend as recommendation number two (2), a target
8 range, as suggested by Mr. Todd, in the range of 55 to
9 \$90 million.

10 Another issue, and, Mr. Chairman, I'm
11 coming near to the end of the RSR section, I'm going to
12 move within this context to the issue of the Immobilizer
13 Incentive Fund.

14 And I guess the starting point with this
15 discussion is to remember, and this is set out at page
16 907 of the transcript, a past admonishment by the Board,
17 admittedly a different word, but that the retained
18 earnings should not be used to fund policies, programs or
19 initiatives.

20 When you're looking at the IIF, the
21 Immobilizer Investment Fund, Incentive Fund, excuse me,
22 it's also important to recall the evidence of Mr. Todd,
23 at least from his perspective, that this is an investment
24 like any other investment, and that's at page 845 of the
25 transcript.

1 It's expected to have a -- a value in
2 terms of its impact on the operating costs of Manitoba
3 Public Insurance. The more important point about Mr.
4 Todd's evidence though is whether or not there's an
5 appropriation for the IIF.

6 He made a critical point that in terms of
7 the trigger points for a surplus dividend or a surcharge
8 that appropriation out of retained earnings of \$40
9 million should -- should be -- not be used to trigger a
10 surcharge or to trigger a surplus dividend and there's an
11 important policy reason behind that.

12 My clients' concern is that for the
13 purposes of determining the surplus dividend if the
14 Public Utility Board takes that appropriation into
15 account it will be enabling MPI to scoop a \$40 million
16 surplus dividend from Manitoba ratepayers.

17 We're not saying that's the intention of
18 Manitoba Public Insurance, but that would be the impact.
19 A sur -- a dividend that would otherwise be paid to
20 Manitoba ratepayers may be scooped by the Corporation
21 through the mere appropriation of it through retained
22 earnings.

23 As Mr. Todd noted about the IFF, the
24 primary impact of it seems to be to reduce the RSR and
25 bring it down to a lower level that is less likely to

1 trigger refund. He didn't say the intention, but the
2 impact and that's an important impact. And that's not an
3 impact we would suggest, respectfully, that the Board
4 should endorse.

5 One (1) other comment about the
6 Immobilizer Incentive Fund and I'll refer you to page 726
7 of the transcript. When I discussed this with Ms.
8 McLaren I asked whether the -- they would still continue
9 with the IIP, whether or not there was an IFF, whether or
10 not there was an appropriation. And I'd urge you to
11 review her comments at page 726 because my interpretation
12 of them is that there -- there likely would be.

13 So, the important point that I'm trying to
14 make, rather inelegantly at this point in time, is that
15 you can distinguish between the fund and the program
16 itself.

17 So, recommendation 3 from my clients would
18 be for the purposes of considering the surplus dividend,
19 consider the RSR as of February 28th, 2005, the \$135
20 million level, that level pre-transfer or pre-
21 appropriation to the IIF.

22 Recommendation number 4 of my clients is
23 that a surplus dividend of \$45 million should be --
24 should be paid back to Manitoba ratepayers; that
25 calculation is a fairly simple one. The revised target

1 they're proposed is \$55 to \$90 million. The money in the
2 back as at February 28th, 2005 was \$135 million. My
3 clients would submit that \$45 million would be an
4 appropriate amount.

5 They would also note when the Board's
6 considering an appropriate amount it should also take
7 into account the fact that there has been, subsequent to
8 February 28th, 2005 a transfer from SRE and extension, in
9 the range of \$20 million and also a positive forecast for
10 2005/06 in the range of \$50 million.

11 So, my clients, to be clear, submit that
12 the RSR dividend should be based upon the money in the
13 back as of February 28th, 2005 and the difference between
14 that and their recommendations in terms of the target
15 range.

16 If the Board is feeling cautious or
17 conservative it can take some comfort from the fact that
18 there's an additional \$20 million in the bank from SRE
19 and extension as well as the forecast, admittedly only a
20 forecast, of 50 million in net income from -- from the
21 basic program.

22 Mr. Chairman, this is a, as I promised, a,
23 hopefully, a fairly convenient point to break. And I'm
24 about halfway through my argument, so I'd suggest that if
25 that -- if that pleases you?

1 THE CHAIRPERSON: That's fine, Mr.
2 Williams. We'll come back in fifteen (15) minutes.
3 Thank you.

4
5 --- Upon recessing at 10:26 a.m.
6 --- Upon resuming at 10:48 a.m.

7
8 THE CHAIRPERSON: Welcome back, everyone.
9 Mr. Williams...?

10 MR. BYRON WILLIAMS: Thank you, Mr.
11 Chairman, members of the Board.

12 I want to turn -- we spoke briefly about
13 the IIF. I want to turn to the IIP. The program as
14 opposed to the fund. And I note from the -- just
15 reviewing the transcript in terms of Mr. Saranchuk's
16 discussion with MPI, he talked really about three (3)
17 different approaches to how we treat the -- the IIP
18 program in terms of its expenses.

19 One was, you know, an allocation of -- in
20 terms of the IIF. The second was a deferral and
21 amortization approach which I think is set out in PUB
22 second round Interrogatory number 2. And I think Mr.
23 Todd was speaking of a similar approach.

24 And I think a third approach, which I
25 believe has been canvassed in this hearing, although not

1 as at great length is, treating it just as an incurred
2 expense akin to road safety.

3 And my clients had an extensive discussion
4 on this with me on -- on Friday. And they wanted to take
5 this opportunity to offer some comments, both about the
6 IIP in general and about the issue of matching or
7 treating it as an incurred expense.

8 In terms of the IIP in general, the -- the
9 clients are -- have some introductory comments, almost in
10 the nature of concerns that they do want to talk about.
11 They do applaud the leadership of MPI in -- in this
12 program because they think it's an important issue.

13 But they urge upon the Board in evaluating
14 this program and in also in determining its treatment to
15 exercise some caution. And I guess for probably six (6)
16 reasons that I'll -- I'll set out first and then
17 elaborate.

18 One (1) of the general concerns that my
19 clients will express and elaborate upon is in terms of
20 the riskiness of predicting participation rates, and I'll
21 elaborate upon that in a couple of seconds.

22 A second concern deals with the novelty of
23 this program. A third concern relates to the MPI
24 approach to developing its business plan. A fourth
25 concern relates to the polling data obtained by Manitoba

1 Public Insurance and whether or not that was incorporated
2 into the -- the plan.

3 A fifth is -- concern relates to my
4 client's expectations of consumer behaviour. And a sixth
5 concern, while applauding Mr. Galenzoski's candour,
6 relates to the -- the comments of Mr. Galenzoski, the
7 fairly optimistic projection comments, and I'll elaborate
8 upon those in turn.

9 I think a starting point is to remember
10 that predicting participation rates in any program, in
11 particular government programs, is not a sure thing.

12 Two (2) key drivers in terms of what one
13 can reasonably expect in terms of people participating,
14 one (1) is the level of the benefit that the program is
15 being offered. A second is a difficulty in applying for
16 or accessing that benefit.

17 And -- and I think it's fair to say, and
18 this is not on the record, but I think the Board can
19 accept this as -- as fact, is that rarely do social
20 programs of any type, achieve 100 percent participation
21 rates. The best designed programs with the best
22 benefits, with the easiest access, it's -- it's very
23 rare, even in those cases, to achieve a 100 percent
24 participation rate.

25 And just as one example again, this is in

1 the public domain, I'm representing clients in another
2 forum, challenging the Employment Insurance Act,
3 compassionate care benefits. And that case, EI grossly
4 over-estimated the participation rate of -- of Canadians
5 in that program for 2004/03 -- excuse me, 2004/05, they
6 were projecting two hundred and seventy thousand
7 (270,000) Canadians would participate. They've revised
8 that projection down to less than ten thousand (10,000).

9 So, the simple point is that -- that with
10 social programs there are risks in terms of anticipating
11 how many will -- will sign up, and that's a function of
12 the level of benefit, also the difficulty in accessing
13 that benefit.

14 A second concern, this -- this is kind of
15 a double-edged sword, MPI should be rightly applauded for
16 taking a leadership role on the Immobilizer Program. At
17 the same time when you're anticipating the potential
18 benefits, you have to recognize that this is a new
19 program.

20 I think base -- at page 267 of the
21 transcript, MPI's evidence is that this is the only
22 jurisdiction in Canada trying the program.

23 At page 269, and if I've misspoke
24 hopefully they'll correct me, the Corporation has never
25 done anything like this before.

1 So, the point is that when you're trying
2 to anticipate the -- the likely success of this program,
3 we don't have much of a -- a track record out there to
4 evaluate it against. So that's another factor that
5 should be considered in exercising caution in terms of
6 how to treat this program.

7 A third concern for my client, and it goes
8 back to the theme of lack of empir -- of an empirical
9 approach. And I will refer you to the transcripts around
10 page 699, because we tried to explore how MPI developed
11 its business case, and certainly I'm more familiar with
12 Manitoba Hydro in this context, where they develop a
13 business case, test it against alternatives, and then
14 make a decision on whether or not to proceed.

15 In this case, and I asked this question
16 twice, because I wasn't quite confident I'd received the
17 proper answer the first time; my understanding is MPI
18 made the decision that it was imperative to have the
19 immobilizers and then developed the business case after
20 the fact.

21 At page 699, again, this is my
22 interpretation of their comments, they assumed they had
23 to do something and then tested the numbers.

24 In terms of how they tested the number and
25 I refer you to pages 703, there was no empirical

1 sensitivity testing around high risk target groups. And
2 I don't think they did the math as Ms. McLaren I think
3 indicated is, upon reflection, in terms of even what if
4 they had a 75 percent participation rate instead of a 90
5 percent participation rate. And at page 704 she clearly
6 said the math wouldn't have driven us to a different
7 decision.

8 From my clients to the Board this is a
9 gravely concerning approach. This is not how, in their
10 respectful submission, business plans should be
11 developed.

12 Another item of concern for my clients,
13 and this is set out in the CAC book of documents, Tab 30,
14 you don't need to turn there. But it is the polling that
15 was conducted by Manitoba Public Insurance on April 25th,
16 2005 noting that the IIF received approval on April 28th,
17 2005.

18 And at your leisure I'd invite you, on
19 behalf of my clients, to explore those polling results.
20 And I think you'll discover that 13 percent, when asked
21 about the program, said they definitely would not take
22 the program.

23 And there's different answers on the
24 record -- or in the poll, but I think it's fair to say
25 that at least one (1) in five (5) said they were not

1 likely to use that program.

2 Now, this is polling data. We've
3 certainly seen in other circumstances where it proves not
4 to be the case but that -- that's another disquieting
5 sign for my clients.

6 And it's disquieting because it's not
7 clear to them how, if at all, this data, which appears in
8 a report on April 25th, was incorporated into the
9 business plan of Manitoba Public Insurance, especially
10 given that on April 28th the decision was made to go
11 ahead.

12 The client's fifth concern goes to their -
13 - their sense of consumers in Manitoba. Again, they
14 think that there's a lot to be said for MPI taking
15 leadership on this issue. But they -- in their
16 respectful submission the jury is still out on whether
17 this program will -- will work.

18 It's a new program. Predicting
19 participation rates is no -- is notoriously difficult and
20 consumers are -- are not an easily -- easy type of beast,
21 and I say that respectfully, to forecast.

22 And, again, we applaud Mr. Galenzoski on
23 this point because he was very candid on pages 261 to 268
24 in the transcript in noting his own caveats in terms of
25 the program:

1 "We've got fairly optimistic
2 projections with respect to the
3 reduction in theft based on a very
4 healthy take up with the correct
5 vehicles entering the program."

6 And I believe that's page 265, line 17.

7 To sum up, my clients have material
8 concerns with the way this program was designed. Polling
9 taking place on April 25th. A decision being made on
10 April 27th -- or 28th.

11 A decision to do the project first and
12 then a business plan second. No sensitivity testing
13 around that business plan. They would submit that this
14 makes this program a riskier program than the one (1) to
15 two (2) cost to benefit ratio it might suggest.

16 And in trying to make a recommendation to
17 the Board about how they think this program should be
18 treated, certainly it's MPI's choice how they spend their
19 money. My clients on this one (1) rare occasion disagree
20 with Mr. Todd.

21 They don't think that this is really akin
22 to a computer program in the sense that they think the
23 risks -- the likelihood of success is more speculative.
24 They consider the IIP more similar to a road safety
25 program in the sense that the anticipated benefits may or

1 may not materialize.

2 So they're not confident and this is --
3 I'm not sure if it's a recommendation or observation. My
4 client's certainly not confident that the matching
5 approach is the best approach, and their preference,
6 again disagreeing, I think, with Mr. Todd, is that an
7 incurred approach might be more appropriate.

8 A couple of other comments on the -- on
9 the program and assuming that the IIF doesn't go ahead,
10 assuming that this is built into the rate base in some --
11 some way rather than drawing down from the RSR, two (2)
12 questions that occur to my clients. One (1) is, who
13 should these costs be allocated to, should it be private
14 passengers, should it be motorcyclists?

15 And from my clients' perspective this is a
16 program directed at private passenger vehicles. If
17 possible those costs should be directly allocated to
18 them.

19 They would also note that this is
20 primarily an urban program and they think it's important
21 that the ratepayers who are expected to benefit from this
22 program have -- are urban consumers and that the costs
23 associated with that program should be allocated to them.

24 A final comment on the IIP. My clients
25 take the perspective and they do applaud the leadership

1 demonstrated by Manitoba Public Insurance. Given what
2 they consider to be the risk of this program they would
3 have expected that a higher cost to benefit ratio would
4 have been deemed necessary.

5 Mr. Chairman, I'll -- I'll come very
6 briefly back to the IIP a bit later on, but I -- I want
7 to turn to the issue, more generally, of loss
8 prevention/road safety.

9 And I want to start in this discussion at
10 a high level, a theoretical approach and some basic
11 principles that -- that my client would urge upon the
12 Board.

13 The first is a recognition that the
14 insurance industry has access to many powerful levers to
15 influence driver and vehicle owner behaviour. They can
16 influence that behaviour through rates, provide an
17 incentive to make better choices.

18 That can be provided in terms of the type
19 of vehicle people choose. It can be provided through the
20 Bonus/Malus system. It can be provided through a program
21 like IIP, an incentive to install anti-theft devices.

22 There's powerful levers through the
23 revenues that the Corporation has; revenues that they can
24 invest whether in educating the public about risky
25 behaviour, training the public to drive more safely,

1 monitoring and enforcing laws surrounding road safety or
2 auto theft, and finally, investments in infrastructure
3 and engineering such as they have in BC.

4 The ability of the insurance industry to -
5 - to powerfully affect positive change is also enhanced
6 by its access to data, collision data. In Manitoba
7 Public Insurance's case, collision and driver data.

8 So, the potential exists to achieve
9 positive benefits for society in general and for the
10 insurance industry in particular. And as compared to
11 private insurers, in a competitive market the payback to
12 a public insurance -- insurer is likely to be greater.

13 And we would submit, and we'd refer you to
14 page 691 of the transcript, that the payback's also
15 likely to be greater for Manitoba Public Insurance as
16 opposed to the Department of Transportation, the
17 department, the government branch which has to compete
18 with health care, with education, with other major
19 government initiatives.

20 As well, the Department of Transportation,
21 any benefits they may achieve may not be realized back in
22 their own budget, their investments may benefit the
23 Department of Health, they may benefit someone else.

24 So from my client's perspective, Manitoba
25 Public Insurance is in a strong position to effect

1 change, and it arguably stems from a self interested
2 perspective to most directly benefit from an enhanced
3 investment in road safety and loss prevention. It has
4 the tools, the means and the incentive.

5 Again, still dealing at a theoretical
6 level, my clients are also cognizant of the risks that
7 Manitoba Public Insurance may face, in these -- in
8 dealing with these issues. There's risks that it be
9 invested less than wisely, there's risk that it may be
10 pressured to do unwise things, either for the purposes of
11 public relations, or to fill the vacuum left by others,
12 if others are not holding up their end of the bargain.
13 MPI may be tempted to do things because they are popular,
14 rather than because they work.

15 And to the extent that popular initiatives
16 can't be demonstrated to work, MPI may be tempted to
17 change the way they assess those initiatives, and I'll
18 get to that on the subject of driver education.

19 So as a starting point for my clients,
20 it's important to address the Corporation's incentives or
21 its investments in road safety and loss prevention, in a
22 rigorous principled manner, examining whether they're
23 getting best value for the dollar, based upon clearly
24 defined rules on when it's appropriate to invest, and how
25 it's best to allocate resources.

1 So the questions my clients will ask are
2 is MPI achieving its best value? Is it operating under
3 clearly defined rules, and is it fully achieving its
4 potential?

5 I think the best way to do that is to look
6 at MPI pre-IIP, pre WATS. MPI up to 2004/05.

7 And to look at the performance of MPI in
8 terms of three (3) areas, auto theft programming,
9 driver's education and the big three (3), impaired
10 driving, occupant restraint and speeding.

11 And you don't need to refer to it, but in
12 my cross-examination of the MPI Panel on October the 6th,
13 we went through a table entitled, Auto theft prevention
14 expenses and theft experience. Basically it tracked the
15 performance of MPI from 2001/02 through to 2004/05, on
16 auto theft.

17 And that table's important because it
18 demonstrates three (3) patterns. A growing expenditure
19 in auto theft prevention, a growing expenditure in direct
20 investment in individual programs, and a growth in theft
21 claims, both attempted and actual.

22 So what you have is a growing investment
23 and a growing theft pattern. And what's striking about
24 that table is the response of the Corporation at page 733
25 of the transcript, when it confirmed that there was no

1 cost benefit analysis in terms of that programming.

2 And I think Mr. Galenzoski at page 273 of
3 the transcript, certainly didn't concede my point but he
4 certainly averted to this as well, when he talked about
5 the investment and the Winnipeg Police Service, and he
6 indicated that there's no guarantee of a benefit
7 whatsoever.

8 And that's a very expensive program with
9 stolen auto unit investments ranging upwards of \$500
10 million since 2002/03.

11 The other point to put with that, Mr.
12 Chairman, is to realize what MPI says about a lot of its
13 road safety programming. It says, well, we measure it by
14 how the public reacts to our programs. The -- the public
15 assists us in terms of our programs.

16 Because -- and this is confirmed at page
17 709 of the transcript, this is the pre-PIPP, pre-IIP,
18 pre-WATSS environment. If you look at polling, and this
19 is page 709, MPI's tremendously successful in auto-theft.
20 They've got the most recognized name, 48 percent see
21 MPI's playing a role in auto theft. More than the City
22 of Winnipeg Police, more than the RCMP.

23 And from my clients' perspective this
24 raises a material concern and it emphasizes the point of
25 why a more rigorous, principled approach to cost benefit

1 analysis has to be employed. If you were to go by the
2 polling, this was a tremendously successful pre-2005
3 program. If you're going to go by the results there's
4 not a lot to demonstrate any success.

5 And we're not suggesting that this is
6 intentional by MPI. And, in fact, I think Mr. Bedard was
7 quite persuasive on this point. But an argument could be
8 made -- a strong argument, that the only real benefit in
9 the Corporation's auto-theft expenditures pre-2005 was a
10 public relations benefit.

11 And I direct you to Mr. Galenzoski's
12 discussion at pages 736 through 738 -- 739 of the
13 transcript because I tried to enter into this debate with
14 him. And I suggested that there was no empirical way to
15 measure the success of these programs and that MPI was
16 basing its assessment on intuitive conclusions, and
17 that's at page 738.

18 And that it was responding to public
19 concerns without an empirical basis for measuring the
20 benefits and I suggested that to Mr. Galenzoski at page
21 739. He, of course, rejected my -- my suggestion.

22 But I think there's evidence from within
23 MPI that that concern is shared, at least, by some. And,
24 again, you don't need to turn to it but at Tab 23 of the
25 CAC/MSOS book of documents there's a response to

1 Interrogatory II-18.

2 And that's a document by Strategic
3 Research of MPI, dated March 5th, 2004 related to alcohol
4 related traffic crashes and cost to Manitoba Public
5 Insurance.

6 And that quote from that document, in our
7 respectful submission is quite telling. Manitoba Public
8 Insurance has not established a method that provides
9 management with an economic measure of the magnitude of
10 the problem of impaired driving to the Corporation.

11 The Corporation has no economic measure as
12 a baseline against which to measure the effectiveness of
13 drinking and driving intervention programs. Presently,
14 resource allocation decisions supporting anti-drunk
15 driving activities depend on an emotional appeal rather
16 than objective economic analysis. A candid statement,
17 but a troubling statement from my client's perspective.

18 And I think this point was further
19 highlighted in Mr. -- Mr. Evans' conversation with the
20 MPI Panel, it's page 784 of the transcript. He asked a
21 simple question; why are the Winnipeg Blue Bombers
22 getting more? Why are others getting less?

23 And I'd ask you to reflect upon the answer
24 that MPI gave to him because it's very difficult to -- to
25 discern from the responses provided by Mr. Bedard, any

1 rational, any objective method by which those resources
2 are allocated.

3 Mr. Chairman, I -- I wanted, just on this
4 same theme, also look at a couple of the other major
5 programs of Manitoba Public Insurance. One (1) is
6 drivers' ed., and I won't belabour this point because we
7 went through it last year fairly extensively.

8 But there was an extensive study done, a
9 longitudinal study of the impact of drivers' ed. And
10 there was no demonstrated statistical benefit, either in
11 terms of crash rates or MPI claims, in favour of driver
12 ed. graduates.

13 That's a concern for two (2) reasons. One
14 (1) is that again it's a major program which is difficult
15 to demonstrate a demonstrable benefit to Manitoba Public
16 Insurance ratepayers from that program.

17 The other concern my clients have and it's
18 more immediate in this -- in this proceeding, is that
19 they asked a number of interrogatories which
20 unfortunately I cannot direct you to at this point in
21 time, but one (1) of the messages sent by MPI was
22 relating to how are you going to study driver's ed in the
23 future?

24 And the suggestion made by Manitoba Public
25 Insurance was that they're no longer going to evaluate or

1 they may no longer be -- to evaluate driver ed programs
2 through crash -- crash rate analysis and to my clients
3 that's of grave concern.

4 The results from the -- the previous study
5 in term of driver's ed may not be a positive study, but
6 they're a critical study; that was a good study.
7 Longitudinal analysis by one (1) of the best firms in
8 Canada. And just because the results are unpleasant
9 doesn't mean one should change the criteria by which one
10 evaluates the program.

11 Another simple point to make, Mr.
12 Chairman, is when it comes to the Corporation's
13 investments in road safety you'll often hear, we don't
14 do enforcement, we only do education. We don't do
15 engineering, we only do education.

16 And in my client's respectful submission
17 the Corporation has a bit of a split personality on this
18 issue because of course they do do enforcement. The
19 WATSS program is a perfect example of it. The Road Check
20 program is another example and my clients are concerned
21 and I'll elaborate on this in my recommendations that an
22 artificial line has been drawn.

23 When it comes to road safety programming
24 the Corporation is artificially saying we don't do
25 enforcement, we don't engineering. My clients would

1 submit that the better question for the Corporation is:
2 Is there a positive benefit to this Corporation in terms
3 of a reduction in claims incurred?

4 Rather than drawing artificial lines in
5 the sand, the Corporation should take a hard-nosed
6 empirical look at what makes sense from the Corporation's
7 perspective. When does it make sense to invest in an
8 engineering program? When does it make sense to invest
9 in an enforcement program, not for public relations
10 purposes, but when there's a hard, real payback to the
11 ratepayers of Manitoba Public Insurance?

12 You don't have to fear too much, Mr.
13 Chairman, because I'm going to get off the pre-2004/05
14 stuff right away, but there was one (1) comment by
15 Manitoba Public Insurance right at the end of our -- my
16 discussion with them on road safety which I think may --
17 may inadvertently confuse the Board and that was a
18 reference to Vision 2010.

19 And there was a suggestion by Manitoba
20 Public Insurance that there had been a fairly material
21 reduction in average fatalities. And I wasn't quick
22 enough off the draw when the statement was made, but
23 fortunately My Friend Mr. Dawson presented an exhibit,
24 CMMG Number 3, the MPI Injury Claims Breakdown which
25 makes a very simple but very clear point.

1 That the average number of fatalities from
2 the period from 1996 through to 2001 was a hundred and
3 forty-one (141). Manitoba's current average for the 2002
4 through 2004 years is a hundred and forty-six (146).

5 MPI certainly wasn't attempting to mislead
6 the Board in reflecting upon this and they can certainly
7 correct me, I believe they were using data that was a
8 year out of -- out of date and I think that's -- that's
9 what happened, but I wouldn't want it left on the
10 impression -- the record left on the -- the impression
11 left on the record that there's been a material reduction
12 in the average number of fatalities as opposed to the
13 1996 to 2001 years because that's just simply not the
14 case.

15

16 (BRIEF PAUSE)

17

18 The last point to ponder in the 2004/2005
19 -- the pre-2004/2005 period and that's set out in a table
20 by CAC entitled, Cross-Comparison of Road Safety and Auto
21 Crime Prevention Expenditures to Associated Claims Costs.

22 The point to ponder is the question of
23 whether MPI has a disproportionate investment in auto
24 theft programming as opposed to road safety programming.
25 I'm not saying there's too much in auto theft

1 necessarily, but the question is, look at the numbers.

2 Look at the number pre-IIP. Look at the
3 number pre-WATSS. For the 2004/05 year the expenditure
4 per \$1 million in related claims costs for auto crime was
5 thirty-four thousand dollars (\$34,000), more than twice
6 the comparable number for road safety.

7 And as you move forward to the 06/07 year
8 you'll see that the expenditure in terms of auto crime
9 prevention strategies is more than double what it was for
10 04/05.

11 So, again, a question may be raised
12 whether there's a disproportionate emphasis on road
13 safety. Excuse me, I mis-spoke, a disproportionate
14 emphasis on auto theft.

15 In terms of where we are today, we can
16 look at the big three (3) programs on the road safety
17 side; impaired driving strategies, occupant restraint
18 strategies and speed related strategies.

19 We know that these have been priorities of
20 this Corporation, the big three (3), since the 1990's.
21 And we know that it was not until 2004 that MPI obtained
22 -- did a cost causation study with regard to impaired
23 driving strategies.

24 We also know that in terms of the
25 empirical way to measure occupant restraint that no

1 measure will be developed until 2006. And we also know
2 in terms of speed that it's -- that the data does not
3 appear to be -- or the study does not appear to be
4 available until 2007.

5 One other interesting part of the record
6 is the fact that MPI, to its credit, has been conducting
7 crash causation data in the City of Winnipeg since 2002.
8 And that's something which I'll refer to in my
9 recommendations.

10 It doesn't have enough information, it
11 indicates, to be statistically relevant but that data is
12 starting to be studied and is starting to become
13 available.

14 I want to refer briefly to the WATSS
15 program. And I want to say that this is a program that
16 my clients can unreservedly endorse. They think it's a
17 program that makes tremendous sense for Manitoba Public
18 Insurance.

19 And they want to point to how MPI
20 approached the WATSS program as an example of how it
21 should have approached IIP and as an example of how it
22 should be allocating resources in terms of its big three
23 (3).

24 Look what MPI did in terms of WATSS, page
25 760 of the transcript. It developed a business case. It

1 identified a one (1) to six (6) potential payback. It
2 did that business case based upon experience with other
3 jurisdictions.

4 It looked at the model in Regina. So this
5 was not a novel program. This was a program with which
6 other jurisdictions had experience. Moreover, it took a
7 gradual, tailored, measured approach to this program. It
8 did a pilot project to its credit.

9 The results from Regina were good. The
10 results from the pilot project were good. The numbers,
11 one (1) to six (6) benefit, suggest a tremendously
12 positive impact. Good payback, lower risk, assurance of
13 an experience in other jurisdictions. That's a program
14 that, from my client's perspective, makes good business
15 sense for Manitoba Public Insurance.

16 Compare that to the IIP. Decide to do the
17 program, then do a business case, don't do sensitivity
18 testing, accept a two (2) to one (1) benefit, even though
19 there's no other examples of this program, at least as I
20 understand the evidence, elsewhere. A much riskier
21 program, a much lower anticipated benefit, a program that
22 gives some indication of being hastily embarked upon.

23 And again, compare this -- the WATS
24 approach to the Corporation's approach to the big three
25 (3), go back to the words of strategic review, resource

1 allocation decisions being made upon emotional appeal,
2 not empirical data.

3 So, from my clients' perspective, when is
4 it appropriate for MPI to assume a leadership role? It's
5 appropriate when there's careful empirical analysis,
6 analysis that takes into account the risks that the
7 Corporation is -- is expecting. Is this a low risk or
8 medium risk program, which we would submit WATSS is. Or
9 maybe it's a medium to high risk program which we would
10 submit the IIP is.

11 Take a careful look at the potential
12 benefits, potential costs and the risks associated with
13 the Corporation, with the expenditure. That's when MPI
14 should take a leadership role.

15 And, Mr. Chairman, just by way of
16 summarizing this argument, and then I'll be moving on to
17 short snappers. When we look at the issue of road safety
18 and loss prevention, a starting point has to be the
19 tremendous potential that MPI has to be a leader. It's
20 got a monopoly, it's got access to the data, and it's got
21 a real direct interest in reducing claims costs.

22 From our perspective though, my client's
23 perspective, this is a story, in part, of unrealized
24 potential. There's some promising signs, the
25 Corporation's approach to WATSS is a good approach and

1 we'd recommend it apply in different -- in future
2 circumstances.

3 In terms of my rec -- my client's
4 recommendations in terms of this area, and I think we're
5 up to recommendation number 7, MPI should be adopting
6 clear criteria in terms of cost benefit analysis, or loss
7 prevention and road safety programs. Set guidelines on
8 the acceptable payback, set guidelines on the acceptable
9 level of risk, and set out a methodology on how you're
10 going to evaluate these programs, provide an explanation.

11 We would ask that for the next Hearing, or
12 my clients would ask that for the next Hearing, MPI be
13 asked to report back on how they were allocating
14 expenditures and loss prevention and road safety
15 programs, a narrative of the decision making process and
16 the criteria employed.

17 We would ask that the Corporation also be
18 directed for the next Hearing to report on how they
19 measured the effectiveness of programming on the big
20 three (3), the big three (3) road safety programs.

21 MPI is saying now that they have data on
22 impaired driving, in terms of the costs, in terms of
23 which has some potential for cost benefit analysis.
24 They're saying they're going to acquire it for occupant
25 restraint and for speeding programming.

1 For the next Proceeding we'd ask that MPI
2 be directed to report back, they be directed to finish up
3 this -- the analysis in terms of speeding and occupant
4 restraint for the next year, and report back to the
5 Public Utilities Board on how this new information will
6 be reflected in their decision making, how it can be
7 used, how they expect to use it and what the options are.

8 Likewise, in terms of collision data, we'd
9 ask that MPI be directed to report back and advise, when
10 will they have enough data for it to be statistically
11 relevant. We ask that they be directed to report back
12 and ask how they intend to use this data, and what
13 options they -- they have on the table.

14 In terms of the driver's ed program, my
15 understanding, as I've indicated, is that MPI in the
16 future may be moving away from crash reduction rates as a
17 measurement. We'd ask the Board to affirm the importance
18 of that in terms of measuring the successful program.
19 And we point to the irony of -- of MPI in its discussions
20 of graduated licensing, applauding crash reduction rates,
21 while talking of moving away from that -- that criteria,
22 in terms of -- in terms of driver's education.

23 A final comment relates to the inclusion
24 of all loss prevention and road safety expenses and
25 claims expenses. My clients have some problems with

1 that. The loss prevention expenses, which are directly
2 expected to reduce claims incurred in the foreseeable
3 future, they think those are appropriately assigned as
4 claims expenses.

5 The -- the softer programming, the road
6 safety as it's currently operated, they would suggest
7 belongs on the -- on the operating expense side.

8 On to DVL. Mr. Saranchuk aptly summarized
9 much of the issues around driver and vehicle licensing
10 and the acquisition of it by MPI. I'll highlight the
11 five (5) areas of concern for my clients. One (1) is the
12 loss of the -- of the 5.7 million in terms of fees
13 related to vehicle registration, formerly paid by the
14 Province.

15 Secondly is the anticipated worst case
16 scenario shortfall, in terms of operating expense --
17 excuse me, in terms of the operations of DVL.

18 A third caution or concern relates to the
19 promised synergies, the promised savings resulting from
20 the acquisition of DVL. And I always get concerned when
21 we deal with this subject, because my clients have seen -
22 - been involved in too many rate cases, where the
23 synergies promised have not emerged.

24 They've been -- they're only paper
25 synergies, or virtual synergies, but not real synergies.

1 And so they take a very cautious approach to -- to that.

2 And a fourth concern, and I won't deal
3 with the fifth, but a fourth concern relates to the fact,
4 and it's a suggestion, at least as I understood it from
5 Mr. Galenzoski, that the lines, at some point in time,
6 between DVL and -- and the -- the rest of MPI may become
7 blurred. And I refer you to page 216 of the -- of the
8 transcript, as well as the concerns expressed in the
9 preliminary comments of the Board at page 239.

10 So those are very real concerns from my
11 client's perspective. They want to ensure that basic
12 ratepayers are kept whole, and not asked to cross-
13 subsidize DVL as an unintended consequence of the merger.

14

15 (BRIEF PAUSE)

16

17 MR. BYRON WILLIAMS: In terms of their
18 recommendations for DVL, the -- my clients would be
19 supportive of a process that ensures the protection of
20 basic ratepayers from the costs incurred through DVL, and
21 keeps the costs of DVL transparent.

22 They recommend that MPI be directed to
23 issue a request, RFP, for a full costs of service study
24 by an outside firm, commission such a study, and provide
25 the study at the next GRA. And their hope would be that

1 this would provide an objective basis on which to
2 evaluate the impacts of the integration on MPI and its
3 customers.

4 We recommend that in terms of the BPR or
5 the clients recommend that MPI be directed to -- to
6 identify the following: synergies, value of improved
7 service, and indications as to whether the long term
8 strategy for DVL is anything other than full costs
9 recovered.

10 In terms of the Corporation's -- and I'm
11 moving now to the investment portfolio, in terms of the
12 Corporation's investment portfolio, I will be sharing my
13 client's opinions or views on two (2) subjects, one (1)
14 is the portfolio profile, and the second is the
15 Provincial Management Fees.

16 And just by way of preamble, my clients
17 note that as of June 30, the mix within the portfolio was
18 fairly conservative; about 4 percent cash and short-term
19 paper, 75 percent long-term bonds and 21 percent equity,
20 15 percent Canadian and about 6 percent US. And that's
21 from PUB-1-58.

22 And they characterize that as overall high
23 -- quite conservative because of its high debt component;
24 the substantial proportion of debt and real return; the
25 quality of the debt, meaning provincial and MUSH, M-U-S-

1 H, and the bulk of the equity being in Canadian dollars.

2 So they would characterize that as a
3 fairly conservative portfolio. They also note, at least
4 from their perspective, that the asset allocation targets
5 have changed, mainly in a conservative direction by
6 shifting the range upwards for real return bonds,
7 inflation protected, and Canadian equity slightly, while
8 shifting down the US equity range in the portfolio.

9 And generally, and this will echo the
10 comments that my clients made in the last hearing, they
11 don't have a particular problem with the conservative
12 makeup of the MPI portfolio. They think a conservative
13 portfolio prudently managed is a relatively good choice
14 for Manitoba Public Insurance.

15 It provides a fairly reliable flow of base
16 investment income from the bonds with potential for doing
17 something better with the equity component.

18 In terms of the provincial management fees
19 of nine hundred and seventy-two thousand (972,000) and
20 that's from the transcript page 477, the clients have a
21 number of concerns with these fees.

22 At least from their reading of the record,
23 the provincial managers are not bond traders dealing with
24 below investment grade bonds or minimum investment grade
25 bonds. The type of debt that they hold is largely the

1 result of a policy decision that has been made.

2 The portfolio is comprised of mainly
3 government-backed bonds so there's no material default
4 risk. And from the client's perspective, unless the --
5 the managers believe they can time interest rate changes,
6 which they do not consider to be a good idea, there is
7 really not much point in trying to take portfolio gains
8 on the marketable bonds.

9 From their perspective, it begs the
10 question of what are these fees for? They would
11 recommend that the Corporation be directed to re-evaluate
12 the provincial management arrangements and report back to
13 the Board at the next GRA.

14 The clients would also recommend that MPI
15 continue, at least in the short-term, with its
16 conservative approach to its investment portfolio.

17 They would recommend that the issue of
18 investment be revisited in perhaps a shorter timeframe
19 than the Corporation anticipated, which was four (4) or
20 five (5) years out, and probably they would say within
21 the next three (3) years.

22 At that point in time they'd also be
23 interested in hearing from MPI in terms of the
24 composition of its portfolio from the perspective of
25 ethical and environmental stocks.

1 Two (2) last points, Mr. Chairman. One
2 (1) relates to the issue of the volume factor in
3 forecasting and the transcript references are pages 108,
4 195, 197 and 198. And from my clients' perspective, they
5 see MPI's approach in this area is another manifestation
6 of MPI's anti-quantitative approach.

7 As they understand it, the volume factor
8 methodology seems to use 1.5 percent for the bridge and
9 test years and then 1 percent thereafter. And that that
10 has been the case for the last two (2) years.

11 From my clients' perspective, they can
12 think of only one (1) positive from this -- this
13 approach; low variance. But, unfortunately, other than
14 savings in costs of modelling, data collection, computing
15 and analysis; that is the only positive attribution that
16 they can find for the Corporation's current approach.

17 My clients would argue that the data
18 presented in the attachment to PUB first run
19 interrogatory number 2B displays a systemic under-
20 forecasting of this factor, both in the original forecast
21 and the revised forecast.

22 Notwithstanding a small data sample, in
23 my clients' perspective an unbiased estimator would
24 provide unbiased estimates that would sometime be below
25 actual, sometimes above and the odd time pretty close to

1 actual.

2 But our review -- or my clients' review of
3 the most recent five (5) years for which revised volume
4 factor forecasts and actuals are available shows that the
5 actual exceeds the revised forecast for all but one (1)
6 year, and this math is not on the record, but it's --
7 it's certainly subject to check.

8 They would suggest that for the years 2001
9 through '04/'05 inclusive, the actual average is 1.84
10 percent, the average revised forecast is 1.2 percent and
11 they note that the analysis for the last four (4) years,
12 the average annual volume factor is 2 percent while the
13 revised forecast average for these years is 1.225
14 percent, a 38.75 percent under-forecast of actual.

15 And they'd also note that for the three
16 (3) most recent years for which the application is
17 approved and for which the revised forecasts and actual
18 volume factors are given, 2002/03 through 2004/05, the
19 approved average is 0.8 percent, the revised forecast
20 average is 1.17 and the actual is 2.07.

21 My clients would note that, if the volume
22 factor is understated, then revenues are understated and
23 as MPI notes, claims are also understated.

24 But from their perspective, it's not a
25 wash, because the difference between revenues and costs

1 will also be understated and this isn't a real world
2 example, but just taking this case where revenues are 100
3 percent -- a hundred dollars (\$100), costs are eighty
4 (80), that's a twenty dollar (\$20) difference.

5 If revenues increase by 10 percent and
6 costs increase by 10 percent, then profit, the difference
7 between them, also increases by 10 percent; it's not a
8 wash.

9 From the client's perspective, and they
10 would recommend that MPI should undergo a methodological
11 review in terms of its volume forecasting.

12 Factors that might be included include
13 some type of statistical method of forecasting this
14 factor, such as linear regression or trend analysis, time
15 series analysis could also be used.

16 Pay as you drive, the last comments of my
17 clients. And my clients regard this issue with a great
18 deal of interest, but also with -- with some caution.

19 They see the theoretical advantages of pay
20 as you drive, being that rates are more reflective of
21 risk; that it also may serve to reduce the frequency of
22 accidents and may serve to reduce car usage, and they
23 certainly understand how, for low income people, people
24 on fixed incomes or people who drive less, including
25 seniors, there may be some potential benefits from this.

1 In terms of their concerns, a risk that
2 they see out of this program, one is technical
3 limitations and they wonder whether the costs of policing
4 may outweigh the benefits of reduced accidents.

5 It's a concern; they think it's deserving
6 of future consideration.

7 They also recognize the point of MPI that
8 it, in a monopoly environment, operates as a zero sum
9 game. Unless you can meaningfully impact accident rates,
10 if rates go down for some, they also go up for others.

11 So they see institutional limitations,
12 technical limitations, and they also accept Mr. -- Mr.
13 Dawson's concerns or comments through cross-examination
14 that there may be privacy implications.

15 From the client's perspective, it's an
16 interesting scheme; they'd like to learn more about it.
17 It's not a scheme that they -- they feel the Corporation
18 should be piloting next year, but they would recommend
19 that MPI be directed -- directed to conduct a literature
20 research on pay as you drive schemes including where it's
21 been implemented, any empirical data available, and MPI's
22 commentary on the scheme.

23 And my clients certainly have valued Dr.
24 Miller's input in other proceedings and he's certainly
25 provided valuable input in this proceeding as well. It's

1 a debate that they don't have a final position on;
2 they're certainly looking forward to exploring it as
3 well.

4 Mr. Chairman, I lied to you inadvertently.
5 I said I had no further issues. The last issue is
6 collective bargaining and just a very brief point.

7 We know in the past that a big driver of
8 costs has been the collective bargaining agreements
9 reached with MPI's employees. Those may be very
10 meritorious deals, but the Board has always been
11 presented in a way with a fait accompli in the sense that
12 labour costs have risen and the Board really hasn't had
13 an opportunity to examine them prior to the signing of --
14 of the agreement.

15 We understand that negotiations are
16 undergoing right now. We recommend that MPI be directed
17 to report back at the next Rate Application, in terms of
18 the terms of the agreement, the impact of the costs, and
19 a rationale or an explanation in terms of the -- the
20 basis for reaching that agreement.

21 We think that this will -- certainly it's
22 MPI's choice, and in collaboration with the -- its union
23 to reach a fair agreement. But we think reporting back
24 to the Board in a more formal process would be an
25 important discipline for the Corporation, and one (1) we

1 would support.

2 Mr. Chairman, it's been a lengthy
3 presentation, I apologize for that. But subject to any
4 questions of the Board, those close my client's
5 submissions.

6 MR. LEN EVANS: Just one (1) question,
7 Mr. Williams. I was interested in your comments on pay-
8 as-you-drive insurance as an innovative approach, and
9 your recommendations that MPI conduct a literature
10 search. Is -- is your organization, or are you going to
11 continue researching this, because there's a lot of
12 material on it, and it's a developing area.

13 And it is in -- you know, as I mentioned
14 earlier, in place in Israel, Holland, South Africa, and
15 there's a growing interest in the United States on the
16 part of the environmental people.

17 I was wondering -- and given the fact that
18 it's very consumer friendly, you pay -- you pay for what
19 you purchase by way of insurance through your driving
20 record, whether it's your intention to pursue this
21 through research in the future?

22 MR. BYRON WILLIAMS: I suspect I'll wait
23 for instructions on that.

24 Just from the client's perspective it's an
25 -- an issue that they're cautious about, but they're very

1 that I sat in front of the Board and indicated that,
2 based on the review of the evidence filed, that it
3 appeared that the biggest surprise was that MPI had
4 approached this Board for an increase in the allowable
5 level of RSR from the Board approved limit of 80 million
6 up to \$214 million.

7 Well I think I was mistaken, Mr. Chairman.
8 I think the biggest surprise is that the witnesses could
9 come and ask for that sum of money with a straight face.
10 And one has to wonder whether they practised collectively
11 or individually in front of the mirror to be able to ask
12 this Board to approve two hundred and fourteen thousand
13 dollars (\$214,000) (sic).

14 Now, everybody in the room knows that the
15 MPI witnesses are skilled executives, Manitoba can be
16 very proud of the people that it has running its
17 insurance company. And they contend that in applying
18 best practices, using minimum capital test and dynamic
19 capital adequacy testing, that they support a need for a
20 higher level of RSR.

21 MPI, however, did not file any evidence
22 indicating that either were best practices during the
23 hearings. The best that I think that can be said of
24 these two (2) tests is that they are common or standard
25 practices.

1 As shown in the Coalition's cross-
2 examination there are a number of other approaches that
3 can be used to determine the RSR level such as dynamic
4 financial analysis, ruin probability or expected
5 policyholder surplus.

6 As well, the Corporation had its own in-
7 house methodology that has been approved by this Board
8 previously. And that's the approach, of course, that's
9 been echoed this morning by CAC/MSOS.

10 These approaches are advantageous as they
11 use statistical techniques to determine RSR levels.
12 Comparatively, dynamic capital adequacy and MCT are
13 deterministic, meaning that they are not statistically
14 robust.

15 We learned, during the application
16 process, that the minimum capital test is the standard
17 test used by OSFI for capital requirements for federally
18 regulated, property and casualty, private insurance
19 companies. This test does not apply to MPI.

20 We heard, at length, the trite proposition
21 that the Corporation is quite different than a private
22 insurer in that it does not compete for business, it's
23 monopolist on the basic program and really is,
24 essentially, a monopoly as well on the extension side.

25 Due to its monopoly position, Mr.

1 Zacharias referred to in the opening argument, used to
2 describe the situation as MPI having essentially taxing
3 authority, and I think that bears repeating.

4 Of course, if it experiences a financial
5 need it can, subject to proving its case before this
6 Board, obtain the necessary funds to meet its needs in
7 the event of a significant change in financial
8 circumstances.

9 Contrast this, of course, with private
10 insurers, if they have an unexpected change in their
11 financial circumstances they could attempt to increase
12 rates. However, with competition in the market the
13 company would lose customers and not be able to acquire
14 the additional revenues to resolve the financial
15 situation, resulting in the corporation becoming
16 insolvent. This is a markedly different context than
17 what MPI operates in.

18 It is not a surprise then that OFSI would
19 use a conservative approach to capital requirements, the
20 minimum capital test, to set aside a substantial buffer
21 of retained earnings to protect claimants.

22 MPI's claimants not only have the
23 protection of MPI's monopoly power to protect them, but
24 also the protection from privatization of the Corporation
25 by statute as well as protection as part of the overall

1 government.

2 We learn that dynamic capital adequacy
3 testing is not scientific in the sense of a DNA test
4 where different practitioners would end up with the same
5 DNA results from a sample.

6 The results of dynamic capital adequacy
7 testing varies by practitioner and model used. For
8 example, using Ecklar's E-A-S-Y model, the EASY model
9 would yield potentially different results than
10 Pricewaterhouse's model.

11 We also saw that DCAT's results changed
12 substantially between the August 2004 filing and the
13 September 2005 filing.

14 Typical scientific protocols calls for
15 test results to be reliable and replicable. For example,
16 one researcher can use another researcher's data and
17 should be able to duplicate the results. MPI's in-house
18 approach to risk analysis previously met this test. We
19 see with DCAT analysis this test is not met.

20 The Corporation was surprised that the --
21 the Coalition was surprised that the Corporation did not
22 have an updated DCAT or MCT analysis when it decided on a
23 higher RSR level.

24 Instead it relied on documents available
25 from August 2004 which the Corporation had had prior to

1 last year's hearings. Mr. Galenzoski opined at last
2 year's hearings that MPI would need to even meet 100
3 percent of MCT test requirement. And that was referenced
4 on page 354, line 20 of that transcript.

5 The Corporation had the report at that
6 time so their need for 100 percent cannot have changed
7 based on a new analysis. The CMMG is puzzled by the
8 change in position on the part of the Corporation from
9 last October to the spring of 2005, a period of about six
10 (6) months.

11 Certainly, its risk profile had not
12 changed that much in that time period. MPI's suggestion
13 -- suggested it was an education process that led them to
14 the proposed adoption of the MCT.

15 A process which, according to Mr.
16 Galenzoski, at pages 23 to 25 of page 1002 of the
17 transcript, began around the time of Order 179/01. When
18 questioned related to the underpinnings of modern
19 approaches to regulator capital and those being BASIL 1
20 and BASIL 2, MPI was unable to provide insights into
21 either of those.

22 These accords are the international
23 frameworks that have been the nexus of financial
24 institution capital assessment and monitoring worldwide.
25 If they were aware of the accords they would have been

1 able to advise the Board that the recently adopted BASL 2
2 calls for a greater use of stochastic approaches and
3 allows for the adoption of in-house models for
4 operational risk assessment.

5 If MPI had staff in-house with either of
6 the financial risk manager or professional risk manager
7 designation, they would have been familiar with those
8 changes.

9 It appears, Mr. Chairman, it was a hasty
10 decision that led MPI to adopt the 100 percent MCT
11 target. I use the word "hasty" as it is clear from this
12 application and hearings that MPI was not -- had not
13 fully investigated the size of the RSR it claimed it
14 needed.

15 First is the lack of an updated DCAT
16 report with a second report filed only at the last minute
17 at the hearings. The second is Mr. Galenzoski's comment
18 under questioning by Mr. Saranchuk at page 181 and 182 of
19 the transcript at the time the change to mark-to-market
20 accountant was being suggested as one of the reasons for
21 the higher -- higher RSR. MPI had not done an analysis
22 of the impact.

23 Only as the hearings approached was their
24 analysis undertaken and only then did the Corporation
25 realize that the change did not affect the income

1 statement or rates. CMMG confirmed this during its
2 cross-examination with respect to mark-to-market
3 accounting at WCB.

4 The third evidence of this is the failure
5 of MPI to consider the relevance of the MCT to Crown
6 Corporation's including the taxation issues which I'll
7 discuss later.

8 The fourth was a filing without an MCT
9 target range, only 100 percent target was suggested until
10 the process commenced.

11 The Coalition of Manitoba Motorcycle Group
12 members have surmised that the reason is clear. The
13 Corporation found itself in a position of riches after
14 the last fiscal year and wanted to retain those riches
15 instead of rebating them to the people who provided the
16 funds, the ratepayers.

17 The Coalition queried the Corporation on
18 trends and rate indications suggested to this Board
19 several years ago. At the hearings for 2004/2005 rates,
20 it was clear that the Corporation was proposing that
21 higher rates were needed for '04/'05 and future years.

22 The Coalition argues that the Corporation
23 hasn't adopted an overly conservation approach related to
24 its finances.

25 At a high level, the evidence is clear.

1 For the 2004/05 years, the Corporation had a profit of
2 59.1 million compared to a forecast loss of \$13.8 million
3 as shown in Mr. Galenzoski's pre-filed evidence for the
4 '04/'05 Application.

5 This year, we are learning '05/'06 looks
6 much improved with a profit of 16.8 million, compared to
7 a loss of 5.7 million used to justify the '05/'06 rates.

8 Conservatism is also shown in the discount
9 and interest factors used by MPI in its Application.
10 When it comes to discounting basic claims provisions, it
11 uses a real rate of 3 percent.

12 For comparative purposes, we heard under
13 cross-examination that ICBC uses a real rate of 5
14 percent. In response to CMMG-2-15 for its pension
15 obligations, MPI uses a real rate of 3.75 percent.

16 MPI suggests the nature of its pension
17 obligations is different; however they are long exposure
18 liabilities the same as PIPP benefits.

19 When the actual rate on the MPI portfolio,
20 relative to inflation is considered, it is closer to 5.5
21 percent and similar to ICBC.

22 Also suggests that the MPI assumption of 3
23 or 2 percent after PFAD is very conservative. If MPI
24 adopted a less conservative claims approach, claims
25 provisions would be smaller, resulting in a lower

1 requirement for retained earnings under the MCT.

2 As well, the impact as we heard in cross-
3 examination would be lower rates.

4 We heard during cross-examination that
5 PIPP is the largest portion of claims provisions. When
6 discussing the related PFAD with Mr. Palmer, the Board
7 was made aware that there's a range of 5 to 15 percent
8 that the Canadian Institute of Actuaries guidelines for
9 the PFAD in this case.

10 With respect to PIPP coverages, as shown
11 in AI.9, Exhibit 8, MPI selects numbers of either 12.5
12 percent or 15 percent, again suggesting a very
13 conservative approach.

14 We saw that MPI has been increasing the
15 rate of growth of its PFAD for the last three (3) years.
16 As shown by the CMMG under cross-examination, the
17 increase in PFAD beyond the amount that would have
18 occurred due to claims provisions growth, is an
19 additional \$34 million.

20 When establishing rates, MPI uses 11.8
21 percent of premiums earned as its historical rate
22 assumption. Five (5) and ten (10) year historical data
23 suggests rates of 13 and 14 percent respectively.

24 The effect, again, is to overstate
25 required rates.

1 Further conservative -- conservatism in
2 their rate making methodology is evidenced as we saw
3 several changes to approaches related to miscellaneous
4 type costs.

5 For example, as shown in CMMG-2-45, the
6 change in ICAC results in rates overall being about seven
7 dollars (\$7) higher than they would have been if the ICAC
8 provision in the methodology was unchanged.

9 The overly conservative approach the
10 Corporation uses is also evident when claims forecast and
11 investment risk is considered.

12 Traditionally, MPI has been measuring this
13 risk based on an approach where results are different
14 from expected.

15 However, from a risk perspective, what
16 really matters is when results are worse than expected.
17 CMMG asked the Corporation to produce the measure where
18 only unfavourable outcomes were considered. Known as the
19 semi-variance as shown in CMMG-1-7 and 2-11, risk is
20 about one-half (1/2) to one-third (1/3) of what the
21 Corporation considers.

22 Given this improved performance from MPI's
23 expectation several years ago when its Board was happy
24 with an RSR level of a maximum of \$100 million and when
25 this Board had approved up to \$80 million, it's hard to

1 understand the reason for the higher retained earnings.

2 This excess, and the fact that retained
3 earnings have grown rapidly make it clear, then, that the
4 ratepayers have been overcharged in the past.

5 Instead of receiving a rebate due to rates
6 being higher than necessarily -- higher than necessary,
7 motorcyclists and other ratepayers have been asked to
8 allow MPI to keep their money for them.

9 To add insult to injury, as I mentioned in
10 the opening statement, MPI has chosen to use part of
11 those excesses to establish a special fund that only
12 includes certain vehicle groups, the Immobilizer
13 Incentive Fund.

14 Motorcyclists cannot, as shown in the
15 response to CMMG-1-18, benefit from this fund. Nor can
16 large trucks, as shown in response to CMMG-2-24.

17 These groups contributed to the build up
18 of retained earnings which, based on past practice, would
19 have been returned to them in a form of a dividend and
20 instead, they are being asked to forego a dividend and
21 subsidize other vehicle groups.

22 Motorcyclists who buy a new car with a
23 factory immobilizer are being asked to subsidize
24 customers who chose not to buy a immob -- a new
25 immobilizer equipped vehicle.

1 The Coalition finds this situation ironic
2 given that for years MPI has argued that motorcyclists
3 are being subsidized by passenger vehicles. With the
4 Board's recent ruling on loss transfer this argument no
5 longer holds with expectations in the motorcycle
6 community that rates will decline in the future.

7 The Coalition argues that setting aside
8 funds in the Immobilizer Incentive Fund sets an
9 undesirable precedent if approved by this Board. And I
10 realize that MPI has gone ahead and isn't seeking the
11 approval of this Board directly.

12 Agreement with this approach positions the
13 Corporation in the future to fund all sorts of
14 expenditures which are perhaps socially desirable, but
15 stretch the Corporation's mandate in an unacceptable
16 manner.

17 Perhaps it's socially desirable to fund
18 additional diagnostic equipment at the Manitoba Health
19 Sciences Centre which would benefit claimants and
20 Manitobans as a whole, as an example. Is this something
21 that by setting a precedent in this matter that MPI can
22 go ahead and do in the future?

23 Additionally, by appropriating retained
24 earnings in this manner rather than flowing them directly
25 through operating costs and into rates via approved

1 actuarial techniques, it sets an undesirable precedent
2 with respect to future initiatives that are more
3 corporate in focus.

4 Perhaps the Corporation wishes to build a
5 new computer system, a new building, a new vehicle fleet.
6 These could all be funded through set aside funds, moving
7 them once the precedent is set and removing them from
8 direct scrutiny by the ratepayers as they effect rates
9 through operating expenses.

10 Flowing these costs through operating
11 expenses directly would also prevent or minimize cross-
12 subsidization. It's important to note that MPI could not
13 provide any examples of any other public or private
14 insurers who appropriated funds in this manner.

15 We saw in the CMMG Information Requests
16 and the cross-examination related to operating claims
17 expenses and broker expenses that MPI is ahead of the
18 pack in terms of growth for these costs since 2001.

19 If costs had tracked SGI or ICBC these
20 would have been significantly lower for 2004/05. Perhaps
21 it has been the good financial fortune that the
22 Corporation has experienced that has resulted in this
23 rapid expense growth rate relative to other public
24 insurers since management perhaps is not compelled to be
25 rigorous in controlling costs.

1 In the future, with some \$214 million in
2 RSR funds plus other special set aside funds for who
3 knows what, it may be hard to envision that the
4 Corporation will become more expense conscious.

5 We have ample evidence that staff is being
6 added rapidly as shown in staff levels with an increase
7 in staff of forty-nine (49) person years in total in
8 '04/'05 as shown in CMMG-2-35.

9 MPI, to summarize, justifies its needs for
10 a larger retained earnings on four (4) premises. It is
11 retaining more of the risk and reinsuring less. The
12 absolute dollar amount of claims provisions are growing.
13 The absolute dollar amount of investments is growing.
14 Investments may need to be mark-to-market.

15 The Corporation also suggested that the
16 minimum capital test as an appropriate measure of this
17 higher risk since ICBC uses this approach. At a high
18 level, the CMMG asked me to provide the Board with the
19 following comments on the first four (4) premises. Once
20 those are dispensed with I'll provide a more detailed
21 assessment of why the MPI argument fails.

22 On the first point, it may be true that
23 the Corporation has dropped some of its lower reinsurance
24 policy limits. It is unclear why this change did not
25 result in MPI's Board raising its RSR target range when

1 retentions were first raise -- raised in 2001.

2 We also saw, during cross-examination, the
3 Corporation is unsure, perhaps, of the size of the
4 effect; in response to PUB-2-10(c) there's a suggestion
5 of the quantum effect of the change if serious losses of
6 '03/'04 were considered. We have, however, testimony
7 from Mr. Palmer that those serious losses essentially
8 dissipated so that would not be a factor in the purported
9 higher risk.

10 This leaves -- this changes having some
11 potential to suggest a small increase in retained
12 earnings level, but certainly does not justify changes of
13 more than two and a half (2 1/2) times.

14 Claims provisions are indeed growing. In
15 lockstep the Corporation has been increasing the
16 provision for adverse deviation, the PFAD, included in
17 those claims provisions. These have nearly doubled from
18 \$98 million in 2001 to 189 million in 2005 as shown in
19 response to CMMG-1-5. These provisions are a risk buffer
20 for a mis-estimation of those provisions.

21 As described previously the CMMG showed in
22 cross-examination that MPI has been more aggressive in
23 setting its PFAD in recent years. This reinforces the
24 actuarial opinion provided by Ms. Addy that MPI has been
25 conservative in setting reserves as shown on pages 6

1 through 10 of the Barron report.

2 It stands to reason that if unpaid claims
3 provisions are rising that the amount of investments
4 matched to the claims would grow. This is not a new risk
5 or additional risk, it is the risk described previously
6 related to claims provisions. Counting the higher levels
7 of investments held to meet the higher levels of claims
8 provisions merely double counts that risk.

9 Investments may indeed be marked to market
10 in the near future. However, as shown in cross-
11 examination this is merely a reporting change, it doesn't
12 change the risk portfolio or the risk profile of the
13 Corporation's investment portfolio.

14 As mentioned previously it does not affect
15 the income statement or rates. Perhaps what it does do
16 is cause management to have additional risk in that they
17 have to manage the portfolio more effectively to prevent
18 adverse effects on their balance sheet.

19 To the way of thinking of my Client, they
20 do not see any need for the ratepayer to provide MPI
21 management and executive with a buffer to protect
22 themselves from not operating the company's investment
23 portfolio in a manner that prevents this reporting risk.

24 On a more detailed basis, MPI's approach
25 to establishing the RSR reserve is flawed on a number of

1 grounds. The Corporation has suggested the minimum
2 capital test is legitimate because IBC -- ICBC uses that
3 approach. On the surface this appears to be the case as
4 ICBC does use a minimum capital test target for their
5 basic plan.

6 However, if the Corporation had spent more
7 time doing background research they would have found that
8 this target came out of the black box of government
9 policy making under a special directive. It was not a
10 target or approach that ICBC proposed.

11 Having a higher level of retained earnings
12 based on the MCT may be appropriate at ICBC given the
13 greater market risks it has. ICBC is much more exposed
14 to competition than MPIC with only 60 percent of their
15 revenues derived from sales in the basic plan.
16 Comparatively, MPI derives about 90 percent of its
17 revenues from the basic plan.

18 The second reason, potentially, is that
19 this high RSR target as been selected for ICBC may be
20 less pleasant. Having sufficient retained earnings in
21 place ripens ICBC for privatization since a company with
22 retained earnings near the private sector's standard is
23 easier to sell than one that does not. This is not
24 something that would happen under our existing
25 legislation in Manitoba.

1 If the Corporation has studied in detail
2 the British Columbia Utilities Commission review of the
3 minimum capital test as it is applied to ICBC, it would
4 have been aware that the BCUC has ordered ICBC to apply
5 the MCT with margins removed from the required capital
6 side of the equation. I hope you were able to follow me
7 through all of those. I could maybe wrap them out or
8 something for you, but it's a lot of -- a lot of C's in
9 there.

10 This results in the lower level of
11 retained earnings than would be required if the MCT is
12 simply, blindly applied.

13 The Corporation noted, in its cross-
14 examination of the Corporation, that in the former case,
15 Mr. Weiland, a practising casualty actuary, was in
16 agreement with the BCUC approach, having made the
17 following statements under cross-examination at the ICBC
18 hearings at page 893:

19 "The need to have margin on a reserves
20 is directly related to the capital
21 position of the organization."

22 And so, if a company is adequately
23 capitalized, by whatever definition is decided upon or
24 mandated, then the need for that 5 percent margin on
25 unpaid claims disappears.

1 Relating to these claims provisions for
2 the basic AutoPac, we are talking about amounts held in
3 the provision for adverse deviation which are nearly
4 equal to the 214 million MPI is proposing for the RSR.

5 If that is their target they have it more
6 or less covered so there's no need for an extra retention
7 as retained earnings of RSR.

8 The Coalition scrutinized, in cross-
9 examination, the difference in the treatment of
10 investment capital losses and gains in the Minimum
11 Capital Test.

12 For available capital purposes, a 100
13 percent of losses are considered, while only 50 percent
14 of gains are considered.

15 CMMG brought to the Board's attention that
16 at the most recent ICBC hearings, Mr. Chaudry testified
17 to the BCUC that based on his conversations with OSFI --
18 here we go again, that the major consideration in the 50
19 percent reduction for gains was income tax.

20 For ICBC, and logically for MPI, the
21 effect of not paying income tax status increases the
22 available capital from investment capital gains from 50
23 percent to 80 percent.

24 The Corporation, in late contact with Mr.
25 Christie via the Blackberry, suggested that the 50

1 percent reduction in capital gains is due to variability.
2 The Corporation suggests that the variability argument is
3 not logical.

4 If the reason for the 50 percent reduction
5 were due to the potential that the capital gain may
6 dissipate from a falling investment market, then
7 correspondingly the 50 percent would apply to capital
8 losses, as those losses may dissipate once the market
9 moves upwards.

10 Based on the variability argument, one
11 would expect a symmetrical approach, not one that is
12 different for gains and losses.

13 The Corporation is left to wonder why a
14 P&C company with, say, a 100 million in capital gains in
15 it's portfolio would not take , the gains. Perhaps it
16 is due to earnings management or perhaps it is due to tax
17 planning.

18 From a Minimum Capital Testing
19 perspective, it would always be better to realize the
20 gain in order that 100 percent flowed through to retained
21 earnings, thus improving the MCT ratio.

22 This is much better than only accepting 50
23 percent of the gains if they are not realized. Again,
24 this suggests that the 50 percent reduction must somehow
25 be related to taxes.

1 The Corporation suggested, under cross-
2 examination by Mr. Saranchuk, at pages 350 and 351 of the
3 transcript, that Crown Corporation's Counsel agreed with
4 the Corporation with respect to the adoption of the MCT
5 as an appropriate target.

6 The Corporation could not provide any
7 documentation that supported this belief. Ms. McLaren
8 stated that she had not spoken to that Board regarding
9 the issue. When question related to the expertise, the
10 Crown Corporation's Counsel to make a recommendation in
11 this regard, we found it was not made by an actuary or
12 anyone with particular expertise in capital adequacy.

13 In the end, what we have is no evidence
14 that the Crown Corporation's Counsel supports the MPI
15 position.

16 Perhaps MPI is confused in this matter as
17 they were when they indicated that Crown Corporation's
18 Counsel had no interest in customer surveys as shown in
19 section SM 8.10. We learned during this process that the
20 Counsel had something greater than no interest in that
21 topic.

22 The CMMG suggests that the Board must
23 disregard the information related to the Crown
24 Corporation's Counsel endorsement of MCT.

25 Even if one buys the dollar investment --

1 the dollar amount of investment risk is not double
2 counted, the dollar amount of the claims risk is not
3 double counting the dollar amount of the claims risk, the
4 Corporation has undertaken no direct risk management
5 strategies to mitigate that risk.

6 It was shown during the Information
7 request and in cross-examination process that the
8 Corporation has skilled staff who could undertake direct
9 risk management strategies to mitigate downside
10 investment risk.

11 With three (3) chartered financial
12 analysts on staff who have taken the necessary training,
13 it would be a simple matter to hedge the Corporation's
14 portfolio against adverse changes in the fixed income or
15 equity market.

16 The Department of Finance does it.
17 Farmers do it. But for some reason, in spite of having
18 the skills in place, MPI management does not do it.
19 Perhaps it is because they are not under pressure to make
20 the investment risk better, as we noted earlier.

21 Previously I discussed the issue of mark-
22 to-market accounting and the purported risk to the
23 Corporation. Again, it's a balance sheet risk. It
24 doesn't affect the income statement and rates and it
25 dulls the argument made by the Corporation that mark-to-

1 market accounting will increase risk levels.

2 The Corporation's already dull argument on
3 this point is -- is made worse when one considers that
4 nearly one-quarter (1/4) of the Corporation's assets are
5 MUSH bonds. These are held to maturity and consequently
6 mark-to-market does not have a material effect.

7 The -- the Coalition also uncovered during
8 its examination that the Corporation holds a reserve for
9 default on reinsurance of \$3.7 million as shown in the
10 response to CMMG-1-103.

11 Overall, my client suggests when it comes
12 to retained earnings for basic, the Corporation not only
13 wants to have a belt, it wants suspenders. And then it
14 wants duct tape and then it wants rope to secure both.

15 The belt is the provision for adverse
16 deviation which stands at \$189 million. The suspenders
17 are the suggested \$214 million of RSR reserves, plus set
18 aside funds such as the IIF of \$40 million.

19 The duct tape is the reduction in
20 investment gains by 50 percent or about 20 million and
21 the rope is other conservative practices such as using a
22 very low discount rate for discounting claims reserves
23 and holding reserves such as those related to reinsurance
24 default.

25 In total, by the Coalition's calculations,

1 the Corporation wants to hold risk margins of some \$450
2 million for basic, excluding the impact of the
3 conservative discount rate assumption.

4 On top of this, MPI, of course, has some
5 retained earnings to keep in the mattress for a rainy
6 day. Those are the retained earnings held in SRE and
7 Autopac extension. When the \$80 to \$90 million of
8 current retained earnings from the Autopac extension and
9 SRE mattresses are added, MPI wants to hold a total of
10 about \$550 million in retained earnings; that is, it
11 wants to hold a half a billion dollars.

12 The Coalition, in its cross-examination,
13 pointed out that a level of retained earnings, if the
14 minimum capital test is used, will grow continuously as
15 the claims provision grows. Claims provisions are
16 dependent on the outcomes of actuarially -- actuarial
17 reviews which deal largely with loss development factors
18 and the provision for adverse deviation and selected
19 discount factors.

20 Since the MCT hinges so heavily on these
21 factors and moves with them, the CMMG is of the opinion
22 that future rate applications will become mired in
23 detailed reviews of these as the Corporation's efforts
24 will be directed to setting these factors conservatively
25 while the Intervenors will focus on having factors that

1 are more liberal.

2 In the Coalition's view this suggests very
3 strongly that a fixed target be adopted for the RSR. In
4 summary, related to the RSR and retained earnings, the
5 Coalition argues that based on the facts and the
6 preceding discussion, MPI has not made a case for an
7 increase in the level of retained earnings.

8 For these reasons the CMMG suggests to
9 this Board that retained earning targets be held at the
10 50 to \$80 million level with any excess retained earnings
11 rebated to the taxpayers.

12 In the event that the Board decides a
13 higher target such as the \$90 million recommended by Mr.
14 Todd, the CMMG is of the view that a fixed maximum be set
15 for a multi-year period.

16 As a practical matter, the Board may wish
17 to order the Corporation to hold these retained earnings
18 in excess of \$80 million in a special account until the
19 2007/08 year.

20 At that time, and across the board,
21 surplus dividend could be distributed to ratepayers in a
22 similar fashion as the previous dividend.

23 This would serve to dampen any adverse
24 effects of the one-time move to loss transfer, assisting
25 in that transition.

1 And, Mr. Chairman, there was a number of
2 questions and answers produced to the Board this morning
3 which related to the six (6) issues posed by you on
4 October 11th and I -- one of the questions asked whether
5 a rebate would go to those major classes that have
6 premium insufficiency.

7 And I would suggest to you that if there
8 were any discrimination on that basis that it would be
9 unfair in the sense that a number of the motorcyclists
10 who have the more expensive motorcycles are at rate
11 sufficiency as Mr. Saranchuk pointed out in his review.

12 Similarly a number of private passenger
13 vehicles require some 22 percent increases which was
14 noted by the Corporation on an undertaking. So, I think
15 that if there is a surplus dividend considered, it has to
16 be distributed rateably as it was the last time amongst
17 all classes of vehicle.

18 The coalition argues that the funds
19 allocated to the IIF should be amalgamated into the RSR
20 with these funds becoming part of the disburseable
21 amount. It's interesting to note that Mr. Galenzoski
22 thinks of these as part of the RSR as shown in his pre-
23 filed testimony.

24 And that testimony on page 6 he states:

25 "The Immobilizer Incentive Fund is an

1 appropriation from RSR.
2 The CMMG is particularly concerned that
3 allowing for operating expenses to be
4 funded in this matter sets an
5 undesirable precedent, masks operating
6 costs as they flow through to rates,
7 and is direct cross subsidization of
8 certain classes and territories by
9 other classes, territories and major
10 uses."

11 While the biggest surprise the Corporation
12 served up for 2006 was this RSR target which I have just
13 dealt with. The Corporation also served up some
14 surprises directly related to motorcycle rates. The
15 first surprise was the Corporation was proposing another
16 large increase in spite of two (2) factors.

17 The first is the substantial decrease and
18 rate indicators for motorcycles as shown in CMMG-1-98
19 with the '95/'96 year the data had some 3.5 million in
20 large losses as shown in TI.20 dropping from the
21 equation. The next year the indicator will likely drop
22 again.

23 Combined with loss transfer which the
24 Corporation suggests will have a rate reducing affect,
25 motorcycle rates are most likely to decline in 2007/08.

1 And that's the opinion of the CMMG.

2 The coalition's members cannot understand
3 how this approach with an increase in '06/'07 and a
4 decrease in '07/'08 will achieve MPI's longstanding goal
5 of rate stability.

6 On this point the coalition argues that
7 motorcycle rates should be frozen for '06/'07 given the
8 potential dislocation affects on other vehicle classes
9 with loss transfer implementation. The coalition
10 suggests the Board may wish to consider an across the
11 board freeze for all vehicle classes '06/'07 with only
12 vintaging changes made for passenger vehicles and trucks.

13 Motorcyclists were happily surprised, it's
14 something you haven't heard much from us this afternoon,
15 but the introduction of pleasure use for motorcycles
16 provided them with the same classification plan as used
17 for passenger vehicles and light trucks. And we accept
18 the differential which was proposed.

19 Motorcycle owners were less pleased though
20 with the ongoing difference in the approach used by MPI
21 with respect to credibility and performing rate line
22 adjustments. The evidence is clear for large vehicle
23 groups such as passenger vehicles and light trucks the
24 Corporation uses credibility when determining the rate
25 line adjustment. For smaller groups, motorcycles, that

1 approach is not used.

2 And that occurs in spite of the objective
3 credibility being to account for the size of the data and
4 the variability of the data used in analysis. Smaller
5 the amount of data of course usually the lower the
6 credibility. The more variable the data, the lower the
7 credibility.

8 The Corporation's application has this
9 reversed and subsequently motorcyclists are treated
10 inequitably. Even if the highly variable PIPP costs are
11 a significant factor in the rate groups for motorcycles
12 as the Corporation indicates, this does not decrease the
13 need to use credibility. In fact it suggests that
14 credibility is more important.

15 The Corporation has long suggested that
16 the reason for the rate line adjustments is being heavily
17 weighted to lower rate groups is due to PIPP costs being
18 high and essentially flat across rate groups. We
19 provided material for reference in our Exhibit Book
20 during the Hearings. This wasn't correct across the
21 middle of the rate groups with PIPP cost trending upwards
22 over those rate groups.

23 With rate group zero which the Corporation
24 sought to add, the graph becomes a little more distorted
25 but certainly not flat as is being suggested by the

1 Corporation for the reason of applying a constant PIPP
2 load for each rate group.

3 The Corporation, in response to CMMG-1-81
4 responded:

5 "It has not conducted an analysis of
6 motorcycle engine displacement ranges
7 to ensure that rates across these
8 ranges were correct.

9 Since vehicle risk for motorcycles is
10 measured as a combination of declared
11 value and engine rate group, without
12 adjusting the other, one may yield
13 incorrect results. For example, a
14 higher rate line for a low declared
15 value ranges may only be applicable for
16 a specific engine range. Not all
17 displacement ranges.

18 Considering both simultaneously, as the
19 case with the many factors used in
20 establishing CLEAR rate groups for
21 passenger vehicles would eliminate this
22 potential distortion in rates."

23 Because credibility was not used the
24 doubts about PIPP costs being flat across rate groups and
25 the failure to consider declared value ranges in the

1 analysis, the Coalition argues the motorcycle rate group
2 line adjustment for '06/'07 should not proceed.

3 The Coalition argues that the Board should
4 order the Corporation to provide two (2) analyses for
5 consideration with the '07/'08 application. The first
6 would be similar to the approach today, however, using
7 credibility and looking at the declared value ranges in
8 combination with engine displacements.

9 The second would show the impact of
10 applying Insurance Bureau of Canada rate groups as shown
11 in CMMG Information Request 1-82. In both cases, it
12 would be desirable to have the impacts on the vehicle
13 populations provided.

14 With respect to road safety, noted that
15 the Corporation's expenditures on road safety programming
16 for motorcycles is about ninety thousand dollars
17 (\$90,000) per year.

18 It's a relatively small amount and less
19 than what MPI spends on sponsorships for organizations
20 such as the Blue Bombers, Manitoba Moose and the others
21 listed in CAC/MSOS Exhibit 5.

22 Given the unique characteristics of these
23 vehicles, the Coalition suggests that the Board direct
24 the Corporation to investigate innovative motorcycle road
25 -- specific road safety practices in other jurisdictions

1 and report to the Board on these in '07/'08.

2 The objective would be to find successful
3 programs that could be implemented subsequent to that
4 rate application.

5 The concern that the motorcycle community
6 continues to have is that the anticipated decline in
7 rates with loss transfer will not occur due to data
8 errors in the MPI coding system.

9 Last year we heard of a massive change in
10 dealer rates due to data errors. We saw at TI.20, page
11 33 of the application, that there was a change in coding
12 procedures related to unidentified motorists.

13 This year in the Information Request CMMG-
14 1-48 we saw, once again, the single vehicle accidents for
15 motorcycles continue to rise reaching levels that are
16 more than double the amount of other jurisdictions.

17 The Corporation has not been able to
18 provide the CMMG with adequate comfort that this data is
19 correct. The Coalition's concern is that with more
20 single vehicle accidents coded before long the desirable
21 effects of loss transfer for the motorcycle community and
22 related industry will be washed away.

23 As well, when in -- regarding the error in
24 the calculation of sport bike differentials, the
25 Coalition introduced evidence that MPI had made an error

1 in the calculation of sport bike rates -- sport bike
2 rates for 2005/06.

3 The overcharges were carried forward into
4 the '06/'07 rate application. The size of the errors
5 suggests that this could not merely be rounding of
6 numbers or something similar. As in many cases they're
7 nearly 1.5 percent and there is -- are as high as thirty-
8 nine dollars (\$39). The CMMG members would like a rebate
9 for the overcharge disp -- dispersed to each overcharge
10 customer.

11 As these final arguments have been rather
12 lengthy, let me summarize them before I comment on costs.
13 The Coalition of Manitoba Motorcycle Groups argues that
14 the Corporation has not shown the minimum capital test is
15 appropriate for determining their retained earnings level
16 for the basic insurance program.

17 The Corporation has not proved its case
18 with respect to the need for higher retained earnings.
19 And, consequently, retained earnings should be held at
20 the maximum level of \$80 million. The IIF should be
21 amalgamated into the RSR and considered in the
22 calculation of the excess beyond \$80 million.

23 Retained earnings beyond the 80 million
24 should either be rebated in '06/'07 to all vehicle owners
25 or held in a special account for distribution in '07/'08.

25

Retained earnings should not be directly linked to the minimum capital test as this will cause retained earnings to grow continuously.

The immobilizer incentive costs should be treated as regular operating costs and throw through -- flow through the rating methodology in the same manner as all other operating costs. These costs should be assigned to the vehicle classes who stand to benefit therefore, and thereby eliminating cross-subsidization.

The one hundred and forty dollar (\$140) rebate be -- should be provided to all customers who have immobilized their vehicle either through purchases after market or on original equipment installations. The Board Order -- the Board should order the Corporation that set aside funds such as the IIF will not be allowed in future applications.

Motorcycle rates should be frozen until '07/'08 except for the introduction of the pleasure use category. The increase in number of rate groups for passenger vehicle and light trucks be denied until further information is provided relative to the need for higher maximum insured values for passenger vehicles and light trucks.

The Corporation provides scenarios for the

1 motorcycle rate line adjustment in '07/'08 that would
2 include engine displacement concurrently with declared
3 values as well as scenarios where the IBC rate groups are
4 used.

5 Credibility be applied to motorcycle rate
6 groups in this analysis when undertaking the scenario
7 where MPI data is used to set rate groups.

8 The need for higher motorcycle declared
9 value ranges should be assessed. The Corporation should
10 undertake an analysis of motorcycle safety programs in
11 other jurisdictions and report back on these for '07/'08
12 with a goal of implementing some of the more successful
13 programs in '08/'09 and forward.

14 The rate differential for sport bikes
15 should be corrected retroactively for '05/'06 rates with
16 rebates of the amounts of the error paid to sport bike
17 customers.

18 The coalition will be applying for costs
19 and believes it has met the requirements of class by the
20 Board. We've certainly brought to light a variety of
21 issues that were relevant to these hearings. I think we
22 aided in a better understanding of these issues.

23 We've participated in a responsible
24 manner, cooperated with other Intervenors. Where a not -
25 - CMMG is a not for profit entity that could not present

1 its case without an award of costs and it has a
2 substantial interest in the outcome of the hearings.

3 This application of course was a very
4 large endeavour. The unexpected retained earnings issue
5 resulted in substantial efforts on behalf of the CMMG and
6 I suspect the other Intervenor.

7 There was certainly comments relative to
8 having the documents -- documentation in electric --
9 electronic form. While the Corporation should be
10 commended that it was a green -- it was a green
11 initiative, it was certainly difficult sometimes to work
12 with that.

13 But throughout this difficult and lengthy
14 process the Coalition wishes to thank the Board, Board
15 Counsel, the Corporation and the other Intervenor for
16 the time and attention given to the motorcycle community
17 at this hearing. Thank you.

18 THE CHAIRPERSON: Thank you, Mr. Oakes.
19 Mr. Evans...?

20 MR. LEN EVANS: Thank you, Mr. Chairman.
21 Thank you, Mr. Oakes, for a very comprehensive review
22 and a lot of detailed information, a lot of -- lot of
23 thoughtful suggestions that you put forward.

24 I listened very carefully. I don't
25 believe you touched on the matter of investment

1 portfolio. The representative of the Consumer's
2 Association of Canada this morning was talking about the
3 portfolio, you know, about three-quarters (3/5's) in
4 bonds more or less and over -- just over 20 percent in
5 equity. I think what he said -- Mr. Williams said 4
6 percent in cash.

7 At any rate he observed that it was a
8 conservative approach, but that his organization agreed
9 with that conservative approach. I was wondering whether
10 your group had any views on this investment portfolio and
11 where it should be going?

12 MR. RANDY OAKES: Well, as I stated at
13 the outset we're very proud of the skill that is before
14 us in terms of the MPI Panel and certainly they have the
15 resources to determine what are the best investments for
16 a corporation of their nature and I -- we really don't
17 have the background skill to be able to evaluate that
18 investment mix.

19 MR. LEN EVANS: I see. So, you -- you
20 don't have any view on that subject?

21 MR. RANDY OAKES: I certainly don't have
22 any difficulty.

23 MR. LEN EVANS: Okay. Thanks.

24 THE CHAIRPERSON: Thank you, Mr. Evans.
25 Thanks again, Mr. Oakes.

1 Mr. Roberts, Manitoba Used Car Dealers?

2

3 CLOSING ARGUMENTS BY MR. NICK ROBERTS:

4 MR. NICK ROBERTS: Thank you, Mr.
5 Chairman and Board Members. It has once again been a
6 pleasure to attend these meetings representing the
7 interests of the automobile industry in Manitoba.

8 The MUCBA is dedicated to the enhancement
9 and improvement of the automobile industry in Manitoba
10 for the benefit of the province's consumers through
11 identifying public agenda issues affecting the industry
12 and contributing to the decision-making process.

13 In doing so we represent the collective
14 interests of small to large car dealers. We are the only
15 group here representing the best interests of the dealer
16 population which numbers some fourteen hundred (1,400)
17 dealers and employs thousands of Manitobans in the
18 automobile industry.

19 When I was thinking about closing remarks
20 for this years' hearings I was tempted to say ditto to
21 the remarks of Mr. Oakes and Mr. Williams.

22 In both cases, there was a strong
23 resistance to need MPI to carry extra retained earnings.
24 The MUCDA also believes there will be excess retained
25 earnings held by MPI if the Board approves the \$214

1 million target MPI is proposing.

2 The members of MUCDA and Manitobans
3 employed by those members agree. Considering the group
4 Mr. Williams represents, the group Mr. Oakes represents
5 and my group, the Board, I believe, has a reasonable
6 cross-section of the Manitoba populus, all of whom are
7 saying no.

8 MPI, as we heard during cross-examination,
9 has not conducted polling of the public with respect to
10 their opinions in this regard.

11 During our cross-examination we discovered
12 that in spite of doing a variety of surveys on many
13 topics, the Corporation did not wish to consult with the
14 ratepayers with respect to disbursement of retained
15 earnings beyond the Board's imposed maximum of \$80
16 million.

17 It would have been simple enough to ask a
18 few questions related to how the funds should be
19 expended, or if more monies should be held.

20 This would have provided the gathering
21 with valuable insight into what Manitobans want to be
22 done with the money.

23 The MUCDA also has a concern with the
24 Immobilizer Incentive Fund. The first problem is the
25 fund is in place today and was not part of the 2005/06

1 rate application.

2 By bearing -- by bearing costs of the
3 Immobilizer initiative as retained earnings, it appears
4 MPI believes it can skirt the PUB process.

5 However, as dealers, we know where the
6 funds for the IIF came from; they came from car dealers,
7 commercial truckers and other vehicle classes.

8 This was not some money that dropped from
9 the sky; it was expected -- it was created because rates
10 were higher over the last number of years than expected
11 costs.

12 This Board has jurisdiction over those
13 rates. If they are higher than cost, the excess should
14 be returned to the customers.

15 For Manitoba car dealers any amounts
16 beyond the current PUB target of \$80 million, we believe,
17 should be returned in the form of a surplus dividend to
18 all customers.

19 The MUCDA showed, during cross-
20 examination, that the cost of the IIF, based on a hundred
21 and seventy-two thousand twenty-two (172,022) installs,
22 would be about \$24 million.

23 When asked to reconcile this amount to the
24 40 million, MPI's first response as shown on lines 3 to
25 10 of page 813 of the transcript, that it was due to

1 administration and lost investment opportunities.

2 If this is true, \$16 million is a pretty
3 outrageous assumption. That amount is two-thirds (2/3's)
4 of the actual costs of the immobilizers.

5 When asked for reconciliation of the costs
6 to 40 million, as shown on lines 14 through 24 of page
7 814, MPI suggested it was contained in PUB/MPI-1-6.

8 A review of MPI/MPI-1-6 (sic) provides
9 neither reconciliation nor any information that can be
10 added to reach the \$40 million number.

11 At best, the total cost based on that
12 information request is \$32 million.

13 It therefore remains unclear why the
14 Corporation needs the extra \$16 million set aside from
15 retained earnings. Given the onus being on the
16 Corporation to prove its case, MUCDA suggests to the
17 Board that if it approves the IIF, that the cost be
18 limited to \$24 million, not \$40 million. The remainder
19 would be returned to the RSR.

20 If the Board does rule in favour of an IIF
21 the MUCDA suggests this should be a one-time event, and
22 for the future the Board direct the Corporation to
23 appropriate retained earnings only to the RSR. To do
24 otherwise allows the Corporation too much leeway to be
25 creative with these reserves in the future.

1 The MUCDA -- MUCDA, in Exhibit 3, showed
2 that the Corporation had underestimated the entire cost
3 of the program, since it did not include the cost of
4 foregone revenue from the forty dollar (\$40) annual
5 rebate.

6 The cost of that portion of the program is
7 some \$39 million to 2024/2025 on an undiscounted basis or
8 about \$28 million on a discounted basis. The lion's
9 share of the cost, more than 75 percent in either case,
10 occurs before 2015/2016.

11 MPI suggested that the costs of the
12 forgotten rebate were based on taking a long period of
13 time, as described by Mr. Galenzoski at lines 9 through
14 22 on page 817 of the transcript.

15 This is incorrect and it's quite a curious
16 comment that given that proper cost benefit analysis
17 always considers all costs and benefits including
18 foregone revenue over the lifetime of a project.

19 In this case, the project lifetime would
20 be -- would be the estimated date at which the last
21 immobilizer equipped vehicle leaves the fleet. In this
22 sense, the MUCDA exhibit is conservative since it ends
23 its analysis with some five thousand (5,000) immobilizer
24 equipped vehicles still on the fleet.

25 It is also a curious comment given Mr.

1 Galenzoski's familiarity with long duration process --
2 processes and their financial analysis. Certainly the
3 long-tailed nature of PIPP claims provides him with ample
4 evidence of the importance of considering the full-time
5 duration of costs.

6 The MUCDA also showed, during its cross-
7 examination of MPI, that the IIF is a cross-subsidy.
8 Certain vehicle groups are not eligible, heavy commercial
9 trucks are not eligible, as are other groups.

10 For practical purposes, other territories
11 are subsidizing Winnipeg as we saw from the information
12 filed by MPI during the MUCDA cross-examination. All
13 vehicles are subsidizing the top one hundred (100) as
14 described at page 593, lines 1 to 8, of testimony.

15 Purchasers of new vehicles that are
16 immobilizer equipped do not benefit. All these owners
17 contributed to the fund which was used to create the IIF.
18 MUCDA argues that based on past precedent the Board has
19 been clear that cross-subsidization is not appropriate.

20 The MUCDA is supportive of avoiding cross-
21 subsidization and in the past has been clear in this
22 regard as well. Specifically, it has stated to the Board
23 that it is willing to pay for the costs of providing
24 dealer insurance, provided the case in support of the
25 rate is clear and correct. Dealers are not asked to

1 subsidize others.

2 The MUCDA is not against the Corporation
3 endeavour to eliminate thefts in a proactive manner. In
4 fact, we are 100 percent in favour of it. Our
5 Association, however, believes that what is wrong is the
6 funding approach.

7 A simpler solution that eliminates cross-
8 subsidization would be for MPI to assign the cost of the
9 immobilizer incentive to the eligible classes on the
10 basis -- on the basis of the costs to the class of the
11 incentive, just like any other operating cost. This
12 would eliminate the need for the IIF and those funds
13 would be returned to the RSR.

14 As well, the MUCDA suggests that the
15 Corporation fully fund the immobilizer installation with
16 no payment required by the customer. By eliminating the
17 forty dollar (\$40) rebate much of the cost would be
18 covered.

19 The approach would serve three (3)
20 purposes. It would minimize cross-subsidization since
21 rates for different classes would be adjusted based on
22 their use of the program.

23 It would set owners who bought factory
24 immobilizer equipped vehicles on a more equal footing
25 with those who received the free immobilizer installation

1 since new cars with an immobilizer installed often
2 benefit from lower rate groupings.

3 It would increase the rate of immobilizer
4 adoption since the owner would have no up front costs. A
5 hundred and forty dollars (\$140) may be a stretch for
6 many families in the areas hardest hit by vehicle thefts.

7 And here's my short snapper. Assuming an
8 install rate for 2006/2007, as shown in PUB-1-9 Exhibit
9 2, with five thousand (5,000) installs the rate effect
10 would be \$1,400,000; that's two hundred and eighty
11 dollars (\$280) times the five thousand (5,000) installs.

12 Assuming this was applied to territory 1
13 with about four hundred thousand (400,000) eligible
14 vehicles, as shown in PUB/MPI-1-9, the one-time increase
15 in the rate base would be about three dollars and fifty
16 cents (\$3.50) per vehicle.

17 This would roughly be about a .3 percent
18 increase for the group. If it applied to all territories
19 with some seven hundred thousand (700,000) eligible
20 vehicles the cost would be about two dollars (\$2) per
21 vehicle insured, and it would be about a .15 percent of
22 an increase. In either case, these are not material
23 increases.

24 Costs would rise to the peak of forty-two
25 thousand (42,000) annual installs in 2007/2008. The

1 potential rate increase for this year could be buffered
2 by the Corporation making less conservative assumptions
3 in its rate making methodology related to discounting
4 investment income and similar variables.

5 After 2007/2008, the number of annual
6 installs is expected to decline, at which time the annual
7 cost would decrease in lockstep.

8 When the program is completed the cost
9 would be removed from the rate base.

10 On the subject of data, our association
11 once again suggests to the Board that MPI data systems be
12 scrutinized. We were glad to see the actuarial standards
13 related to data are in place. Our suggestion to this
14 Board is that MPI provide documentation at the next
15 hearing related to their compliance with the standard.

16 Perhaps they should seek an independent
17 review. Confidence in the data, I might add, would be
18 quite important next year as loss transfer is
19 implemented.

20 Our concern about data quality relates to
21 large increases we have seen in dealer rates in the last
22 five (5) years.

23 We heard from MPI that in territory 1
24 rates went up five hundred and sixty-six (\$566) dollars,
25 while in territory 2 they went up five hundred and

1 twenty-four dollars (\$524).

2 At the same time the number of dealer
3 plates fell some 16 percent. The relationship, while not
4 statistically proven, is pretty clear; the higher rates
5 are starting to affect the dealer group.

6 As car dealers we are not against paying
7 our share of costs; we are uncertain that the costs being
8 assigned truly belong to the dealer class, and
9 accordingly ask for an independent review.

10 MPI appears quite resistant to this, or in
11 filing documentation to support their opinion that the
12 data is accurate.

13 At ICBC the rate making methodology is
14 signed off by both the Corporation's internal actuary,
15 Ms. Minoque and their consulting actuary, Mr. Wieland.

16 As well, the rate filing has a specific
17 reference to the quality of the data. The information is
18 available from the response to CMMG/MPI-2-7 at pages 15
19 and 16 of the ICBC actuarial rate level indication
20 analysis, filed with the British Columbia Utilities
21 Commission, dated August 22nd, 2005.

22 The MUCDA also queried MPI related to the
23 decline in loss development for accident benefits other.
24 Overall, compared to the increase for commercial class,
25 given an expectation that commercial class accident

1 benefits other would also be expected to decline, and
2 then dealer plates would be positively affected.

3 MUCDA received the response to MUCDA/MPI-
4 1-9. This showed a slight increase in lost development
5 form twelve (12) months to ultimate for commercial class.

6 The MUCDA observed that the response
7 provided was incorrect. The response provided only the
8 twelve (12) twenty-four (24) loss development as shown in
9 Exhibit 22-13 of TI.20.

10 Perhaps this is the reason for Mr.
11 Palmer's confusion at lines 8 through 16 of page 804
12 where he speaks about this answer and the related
13 exhibit, referring to twelve (12) month to ultimate
14 twenty-four (24) to ultimate and thirty-six (36) to
15 ultimate factors, et cetera.

16 On that key to the MUCDA's current
17 intervention, MUCDA will be following up on lost
18 development at next years hearings.

19 In particular, with respect to changes in
20 lost development year over year as well as reasons for
21 selection of specific factors.

22 In summary, Mr. Chairman and members of
23 the Board, the Manitoba Used Car Dealers Association
24 position is that the excess RSR beyond the \$80 million
25 limit be returned to customers, the IIF be rolled into

1 the RSR with rates established for the private passenger
2 class based on the cost of the Immobilizer Incentive to
3 the class.

4 This would eliminate the cross
5 subsidization in the program.

6 Alternately, if the IFF is not rolled into
7 the RSR, and the program is retained, the rates for non-
8 eligible classes be reduced an amount each year that is
9 equal to the percentage of the average rate subsidy being
10 given to the private passenger class.

11 That MPI be required to report back to
12 this Board at the next set of hearings related to
13 measures it has taken to comply with the actuarial
14 standard related to data quality.

15 With that, I will wrap up my remarks. I
16 would like to thank the Board, the Corporation and other
17 Intervenors for their efforts in this hearing.

18 I look forward to MUCDA's participation
19 next year.

20 THE CHAIRPERSON: Thank you, Mr. Roberts.
21 Mr. Evans has a question.

22 MR. LEN EVANS: Thank you, Mr. Roberts.

23 I want to ask you the same question that I asked Mr.
24 Oakes. I gather the answer's no, because you didn't
25 mention it, but do you have any position on the

1 investment portfolio, the present investment portfolio of
2 MPI?

3 And I ask that because of the importance
4 of investments in the bottom line.

5 MR. NICK ROBERTS: No, I -- I wouldn't
6 have a comment on that. Like that non -- I'm all right
7 with it.

8 MR. LEN EVANS: Mr. Williams described
9 that it's a conservative approach which his organization
10 is happy with.

11 So, any rate, you're quite happy with the
12 present situation?

13 MR. NICK ROBERTS: Well, I don't know if
14 I'd want to say happy, but we're okay with it.

15 MR. LEN EVANS: Thanks.

16 THE CHAIRPERSON: Thanks again, Mr.
17 Roberts.

18 Next up is the insurance brokers, Ms.
19 Scurfield.

20 I don't see her here so we'll move on then
21 to Mr. Dawson. Oh, I'm sorry.

22 Ms. Shaw...?

23

24 CLOSING ARGUMENTS BY MS. PAM SHAW:

25 MS. PAM SHAW: Thank you, Mr. Chairman.

1 Mr. Chairman, Panel Members, Ladies and
2 Gentlemen. I'm pleased to be here today for CAA
3 Manitoba. We are a not for profit organization
4 representing a hundred and seventy thousand (170,000)
5 members in Manitoba on issues related to automotive
6 travel, insurance and road safety.

7 CAA Manitoba participates in the rate
8 hearings as an intervener to ensure that our members are
9 provided fair and properly priced automotive insurance.
10 Our closing remarks today will reflect on the RSR, the
11 concept of pay as you drive, the DVL merger with MPI,
12 road safety matters and the reduction of auto theft for
13 all Manitobans.

14 On the matter of the RSR, the rate
15 stabilization reserve target levels, the PUB has
16 expressed a level, the \$80 million upper level and we
17 believe that MPI should be held to that level. The
18 reserves are at that high end right now, certainly, well
19 beyond that end. And we don't want to see them built up
20 any further. That's really our position at this time.

21 We listened with interest to the pay as
22 you drive discussion. Reducing emissions from the
23 transportation sector is important to CAA as it is to all
24 Manitobans. However, it doesn't make sense to us that
25 auto insurance rates be set as a means of preserving our

1 environment.

2 CAA is also interested in the incidental
3 question of how to respect a driver's privacy when
4 collecting electronic data for such a scheme. There is
5 some merits to event data recorders, sometimes known as
6 silver boxes or black boxes, currently in modern vehicles
7 and they record a specific set of data at the time of a
8 crash.

9 The data is meant to allow automakers the
10 ability to improve the safety of their vehicle systems.
11 It's been our experience that it's the use of such data,
12 for unintended purposes, that leads to ethical and legal
13 difficulties.

14 CAA would want to see much more research
15 in any case but seriously questions pay as you drive's
16 validity in this auto insurance setting.

17 On the DVL/MPI merger: At last year's
18 rate hearing, CAA registered its concern with the DVL/MPI
19 merger, we felt there were too many questions gone
20 unanswered and we were glad to see more details provided
21 about the agreement brokered by the Provincial Government
22 during this rate hearing.

23 That being said, we heard the Board's
24 concerns about the way in which the province has dealt
25 with MPI in this matter and we agree there are still

1 implications for auto insurance rates on that score.

2 Our other major concern is the pace with
3 which the merger is occurring rather than months, it will
4 be years it seems before we will all truly understand the
5 impact of the merger on MPI's bottom line.

6 CAA was disappointed to hear there may be
7 short term cost overruns on the extension side of its
8 business as a result of the merger of MPI's business. It
9 is important to our members that there be no increases on
10 basic insurance rates but also that the DVL/MPI merger
11 not reduce any surplus dividend we would normally expect
12 in the long term.

13 We believe that the completion of the
14 business process review is key to seeing whether action
15 can be taken soon to reduce the long term costs that the
16 merger has forecasted to incur. CAA believes it's also
17 important that there be a clear plan for action and the
18 sooner the better.

19 Onto road safety: CAA once again
20 encourages MPI to be a leader in road safety initiatives
21 where claims costs and the very real personal costs of
22 injuries and deaths due to motor vehicle collisions can
23 be reduced. We strongly urge MPI to reconsider the idea
24 of funding road improvements where proven measures of
25 safety can be added for all road users alike.

1 Road safety must carry great weight within
2 MPI and we look to MPI to be a leader. Not simply in
3 research or on new initiatives, but also in pulling
4 together the Manitoba community of road safety
5 professionals and stakeholders. In the long term CAA
6 believes we will be stronger and better equipped to
7 change minds and behaviours when we share our knowledge
8 and work together.

9 On to auto theft: At last year's rate
10 hearing CAA offered suggestions on how MPI might improve
11 the safety of our roads by paying more attention to the
12 vehicle owners' role in preventing auto theft.

13 We've since partnered with MPI in
14 delivering the Immobilizer Incentive Program to
15 Manitobans. We believe the program is an important step
16 towards reducing the costs of auto theft to society and
17 to innocent motorists throughout Manitoba.

18 If owners of high risk vehicles would take
19 part in the program sooner, however, we feel sure there
20 would be a benefit to all ratepayers in the long term,
21 but also seen sooner for our ratepayers.

22 We continue to hold that charging a high
23 risk vehicle premium surcharge would make sense as a way
24 to encourage greater take up of the program by the top
25 one hundred (100) at risk vehicles and that this action

1 will lead to claims savings sooner.

2 As we suggested last year, to avoid the
3 surcharge owners need only install an immobilizer.
4 Faster take up of the program would be a benefit for all
5 ratepayers of the Public Insurance System.

6 This is the end of our remarks. I thank
7 the Board, fellow Intervenors and the Panel of MPI for
8 allowing us our participation here. And on behalf of the
9 membership of CAA Manitoba, thank you for the chance to
10 participate in this valuable process. Thank you.

11 THE CHAIRPERSON: Thank you very much.

12 Mr. Evans...?

13 MR. LEN EVANS: Thank you. I have a -- I
14 was interested in your comments about pay-as-you-drive
15 insurance, PAYD. And I was wondering, in view of your
16 comments, I was wondering -- and concerns about privacy,
17 whether you were aware that some jurisdictions do not use
18 electronic equipment in this system.

19 There is a major insurer in Holland that
20 uses annual vehicle inspections. The vehicles are
21 inspected once a year and at that time odometers are
22 checked and there are other -- I'm sure there are other
23 techniques they use to assure accuracy of odometers.

24 But I was just wondering whether you were
25 aware that some -- and I believe in South Africa, they

1 use some sort of a credit card with the company?

2 MS. PAM SHAW: We haven't done a study of
3 this pay-as-you-drive models, what's available out there.
4 But I -- I do know that from a -- from a motorists'
5 consumer point of view we've recently, in -- in most
6 driver's memory, left annual automotive inspections.

7 We now have the safety inspections only on
8 the exchange of a vehicle and I believe that that would
9 be something we would be very interested in looking at
10 as, would there be some additional cost to a consumer who
11 is going to have to now make sure their vehicle gets
12 inspected every year.

13 So I think that it raises just as many
14 questions as -- as the privacy issue does for our
15 membership.

16 MR. LEN EVANS: Thank you. One other
17 question. Thank you. Mr. Williams, this morning, was
18 referring to the need for literature search and I believe
19 he was urging this on MPI.

20 At any rate, I was wondering whether your
21 organization would be prepared to look into this more
22 closely?

23 You know, there is a lot on the Internet
24 and I as very intrigued to find that the State of Texas
25 has passed legislation to encourage private insurers to

1 get into this type of system.

2 Also the state of Oregon, I believe,
3 offers a hundred dollar (\$100) policy per policy credit
4 for any companies that offers this type. And the City
5 Council of Vancouver unanimously passed a resolution
6 asking ICBC to bring in this type of insurance. So
7 there's a lot of developments.

8 The major environmental -- federal
9 environmental agency in Washington, DC is promoting it.
10 Pointing out that -- that there is a significant
11 reduction in auto usage -- auto traffic which results in
12 a considerable reduction, I think they use the number 17
13 percent reduction in automobile accidents in the United
14 States.

15 Now, how valid these data -- this data is
16 I don't know. I'm just pointing out that there's a lot
17 of material and I think it's a very important subject.

18 I think this is the way of the future and
19 I think your organization should consider doing some
20 research. So this isn't really a question, I guess, than
21 a request.

22 MS. PAM SHAW: Thank you, Mr. Evans.
23 Frankly, the issues and the matters that CAA nationally
24 looks at include climate change. We have participated on
25 the transportation round tables at the federal level for

1 the last six (6) years.

2 I've participated in whatever groups have
3 met in Manitoba to deal with these things. So we
4 certainly keep our finger on the pulse of what's
5 happening or being asked of the transportation sector.

6 I haven't -- I haven't been aware that any
7 of our clubs have requested a literature review, such as
8 it is, and certainly I might -- I might be looking into,
9 just myself, to be up on it for the next rate hearing,
10 you can be sure.

11 MR. LEN EVANS: All right. Thank you.

12 THE CHAIRPERSON: Thank you again, Ms.
13 Shaw.

14 We'll move now then to Mr. Dawson.

15

16 CLOSING ARGUMENTS BY MR. ROBERT DAWSON:

17 MR. ROBERT DAWSON: Thank you, Mr.
18 Chairman, Members of the Board.

19 The Manitoba Bar Association intends, in
20 its closing submissions, to cover three (3) large points,
21 the first being the way in which the Applicant handles
22 personal injury claims.

23 The second area deals with the current bar
24 on personal injury lawsuits and thirdly the question that
25 has arisen in the course of these hearings on

1 sustainability and its application to the functions of
2 this particular Board.

3 If I may turn then to the first area in
4 which the Manitoba Bar Association proposes to make
5 submissions, that is the handling of personal injury
6 claims, I can tell you that the -- my client will seek a
7 Board recommendation as follows and I'll explain it after
8 I've gone through that the Manitoba Public Insurance
9 Corporation justify the cost effectiveness of its -- to
10 use Ms. McLaren's words at page 1171 line 20 -- its
11 cohesive integrated service approach to the handling of
12 personal injury claims in contrast to providing
13 independent claims advisors to advocate on behalf of
14 claimants.

15 So, the first recommendation is that the
16 MPI should justify its cost effective -- cost
17 effectiveness of its current approach as opposed to
18 alternates that may be considered.

19 And the second recommendation is an
20 interim one and that is that MPI should, for the reasons
21 that will follow, inform every claimant at first contact
22 that they may seek assistance from external resources
23 such as lawyers, but also such as community health --
24 help groups.

25 Of course this is an issue that certainly

1 is relevant to the jurisdiction and activities of the
2 Public Utilities Board, the very narrow and specific
3 reason being that rates, of course, are approved on the
4 assumption that claimants will receive the benefits to
5 which they are legally entitled and if benefits are not
6 received then expenses have been overstated and revenues
7 have been understated for the purpose of collecting
8 rates.

9 Apart from that very narrow reason as to
10 why this is an issue that should concern the Board there
11 are also broad reasons. Of course this Board has a
12 general oversight to look into issues relating to the
13 public interest.

14 Secondly, of course, the fact is that the
15 Applicant is a monopoly insurer. And thirdly, of course,
16 is that the MPI legislative scheme forecloses payments
17 for pain and suffering and that means, as I think I had
18 mentioned in the course of my cross-examination, that
19 there's no extra settlement money so to speak to cover
20 benefits that weren't actually received.

21 So, if the Board is prepared to accept
22 that this is an issue that's relevant to its interests,
23 let me explain then what the nature of the problem is.

24 MPI has acknowledged that it has a
25 statutory duty to advise claimants and assist them to

1 obtain the benefits to which they're entitled and of
2 course that relates to the Manitoba Public Insurance
3 Corporation Act at Section 150 as well acknowledged by
4 Mr. Bedard in cross-examination at page 111 -- I'm sorry,
5 at page 1151 line 10.

6 I should emphasize that the Manitoba Bar
7 Association certainly agrees with Mr. Bedard when, at
8 page 1158, he stated:

9 "That MPI goes [in his words] to great
10 lengths to make sure that people are as
11 informed as they need to be in order to
12 process their claims."

13 My Client goes on also to agree with Mr.
14 Bedard's very next line which is:

15 "I'm not saying we're perfect in every
16 case."

17 The consequence when any claimant does not
18 receive the benefits to which they're entitled, is, of
19 course, that that person, as far as they're concerned,
20 quite bluntly put, has been cheated by the system; more
21 broadly put, in the context of this Board, premiums have
22 been collected for which benefits have not been and
23 wrongly not been paid.

24 So, what are the recommendations that
25 we're proposing then to address this specific problem?

1 It's important to note the context in
2 which we find ourselves and that is that PIPP claimants
3 today of course do not have the same kind and level of
4 assistance and support as they had prior to the
5 introduction of PIP.

6 In my cross-examination of Mr. Bedard it
7 was quite clear that, prior to the introduction of PIP,
8 clients were -- claimants rather were much more inclined
9 to rely upon lawyers to get help in handling their
10 personal injury claims. Mr. Bedard agreed with me that
11 page 1145, that lawyers occasionally uncovered errors on
12 behalf of MPI. At 1146, he said that lawyers sometimes
13 even increased the cash settlements.

14 Clients therefore felt that it was
15 worthwhile to spend money on their lawyers even though
16 they were involved in what might be called minor
17 injuries, to use Ms. McLaren's description at page 1147.
18 But of course today, and Mr. Bedard confirmed this at
19 page 1149 line 18, it's rare that lawyers are going to be
20 involved in minor injury claims under the PIPP system
21 that we have today.

22 As Mr. Bedard conceded at page 1159 line
23 1, the existing forms of assistance, that is in his
24 words, the ombudsman, the fair practice office, the
25 members of the legislature, these of course are forms of

1 assistance that are not initially available at the time
2 that a claim begins and perhaps at a time when a claimant
3 most needs assistance.

4 Instead, MPI tells us that the reliances
5 upon the case managers of Manitoba Public Insurance to
6 help claimants and of course that raises the perception
7 if not the fact of a bias. The advice, of course, comes
8 from someone in this case who is in the employ and under
9 the direction of Manitoba Public Insurance and Mr. Bedard
10 agreed with me on that point at page 1156, line 11.

11 It was -- it is even arguable in terms of
12 the concern over bias. And I should emphasize that there
13 is no evidence of what I'm about to say, it's merely a
14 perceptible argument that could be made that, for
15 example, some of the re-insurance pressures that MPI
16 faces might cause it to adopt cost controls to compete on
17 the same terms as private insurance companies going after
18 those re-insurance contracts.

19 And that's based upon, although I should
20 emphasize, never said specifically it is based upon
21 comments by Mr. Galenzoski. There are several
22 occurrences, for the record. They appear at page 307,
23 line 12 when Mr. Saranchuk was conducting his cross-
24 examination and my own cross at 1179, line 21 and 1180,
25 line 3.

1 So if that's the problem that we currently
2 face and that is the submission of the Manitoba Bar
3 Association, it's important to note, of course, that the
4 Workers Compensation Board and even the Automobile Injury
5 Appeal Commission have both introduced some form of
6 independent advisor.

7 And it's arguable that these were
8 introduced for the purpose of getting around some of the
9 problems that arise when a claimant such as MPI will deal
10 with, has difficulties with the system. Manitoba Public
11 Insurance, of course, admitted in cross-examination that
12 they're very much aware of the Workers Compensation
13 Program. Mr. Bedard said that at page 1160, line 3 and
14 he also said at page 1161, line 7, that MPI's, of course,
15 aware of the -- the claimant advisor program at the
16 Appeal Commission.

17 What's interesting is that the MPI witness
18 panel have no knowledge or at least they put no knowledge
19 when I asked them this question, as to why those
20 particular question -- programs were instituted. Mr.
21 Bedard at page 1160, line 3 said that.

22 I suggested and do so again that these are
23 programs that boards like the Workers Compensation Board
24 and the Appeals Commission have introduced, not because
25 they're trying to be good citizens, not because they're

1 overwhelmed with kindness, but rather they realized the
2 very practical reality which is that it simply makes
3 their job much easier.

4 In the case of Workers Compensation, the
5 thesis that we put forward is that it simply is a more
6 cost effective way of dealing with claimants who
7 otherwise would tie up existing claims processing. In
8 short, it is therefore a more efficient operation for
9 these bodies to have introduced these programs; that is
10 the submission.

11 MPI in reply, of course, tells us that
12 there's no need for a claimant advisory model, but they
13 do so, it's important to note, without knowing if this
14 kind of a claimant advisory model would help claimants or
15 even improve MPI's bottom line.

16 Ms. McLaren at page 1171, line 20 said
17 that MPI just frankly prefers what she called quote:
18 "the cohesive integrated service" approach. And at page
19 1168, line 10 she said, perhaps dismissing the suggestion
20 that I was putting forward that we, that is MPI:

21 "... do not necessarily trade off
22 service to achieve cost savings."

23 The evidence suggested, and I submit again
24 here, that MPI simply lacks the sufficient knowledge to
25 say whether or not these proposals would introduce any

1 cost savings to us.

2 Mr. Bedard, at page 1164, line 25,
3 confirmed that MPI has no knowledge about the kind of
4 person who might need assistance beyond that which is
5 currently offered when filing a claim.

6 And at page 1167, line 18, he confirmed
7 that the Corporation had not undertaken a study of
8 whether or not it would be cheaper to offload the
9 extensive discussions and explanations that are necessary
10 for such persons and claimants, than to have them
11 currently dealt with by their adjusters.

12 It's even arguable that going beyond the
13 scope of the intervention that the Manitoba Bar
14 Association had assumed when we began this process, that
15 a claimant advisory program should be in place, even for
16 claimants who are coming to MPI with simple physical
17 damage claims as opposed to personal injury claims.

18 Any disentanglement of a benefit under the
19 legislative scheme should, we submit, be cause for
20 concern. And so that brings us then to the two (2)
21 recommendations that we've put forward.

22 The first then, by way of recap, being
23 that MPI justify the cost-effectiveness of its cohesive,
24 integrated service approach to the handling of personal
25 injury claims in contrast to providing independent claims

1 advisors to advocate on behalf of claimants.

2 And, secondly, as a temporary measure
3 until there is a report on that, MPI could, at least,
4 inform every claimant at first contact, that such
5 claimants may wish to seek assistance from external
6 resources, such as lawyers, but also such as many of the
7 community help groups that exist in the city and, indeed,
8 throughout the province.

9 If I may, by way of digression before I
10 turn to our second major point, indicate that clearly the
11 Manitoba Bar Association's participation before the
12 Public Utilities Board in this process always focusses
13 upon, as you can see, the public interest and, indeed,
14 tries to support the Board's role in its oversight or
15 public interest jurisdiction.

16 And, unlike some of the other Intervenors,
17 of course, the Manitoba Bar Association tackles some of
18 the issues that don't otherwise come up. Of course, the
19 Consumers' Association and the Manitoba Seniors, they
20 usually focus in a rather specific way upon the way in
21 which MPI spends its money.

22 Other groups tend to advance interests
23 that relate to their own particular matters. And in this
24 particular hearing, I'll suggest that the Manitoba Bar
25 Association has really focussed -- one (1) of the few

1 intervenors who has focussed on broad interests, broad
2 concerns of public interest; and that this is an
3 opportunity for the Public Utilities Board to prod and
4 test.

5 And that's another reason why the Bar
6 Association appears here. Undoubtedly, and maybe My
7 Learned Friend, Mr. McCulloch, will eventually mention
8 it, sometimes the Bar Association comes before this Board
9 and in its Interrogatories or other points raises
10 questions and answers -- and gets answers with which it's
11 frankly -- and perhaps to his amazement, surprisingly
12 satisfied.

13 It would be noted that, for example, MPI's
14 response to prodding from last year on the way in which
15 the Appeal Commission impacts MPI costs has not attracted
16 further attention. My client is satisfied with that
17 reply.

18 Similarly in this year's hearing there was
19 some initial concern on the part of my client related to
20 the way in which demerits were being structured. And
21 there was some concern and that was laid out, for
22 example, in our first round Interrogatory Information
23 Request 6. And that is another point in which the
24 answers came back in a way that satisfied my client.

25 So the very fact that nothing more is made

1 of certain points often suggests that there has been,
2 shall we say, the gadfly approach. There has been
3 prodding. There has been testing by MBA.

4 And at the same time, it also helps the
5 Bar Association to identify points that it could raise in
6 other fora, for example, we've raised concerns relating
7 to driver licensing and the privacy issues that could
8 arise with changes to our drivers' licenses. And that
9 was in our fifteenth Information Request of the first
10 round.

11 And, of course, that's not something that
12 this Board properly wants to address its concerns to.
13 But it is an opportunity for the Bar Association to be
14 alerted to issues and take those issues up in the
15 appropriate forum.

16 One (1) of the big issues, though, that we
17 have felt that needed to be prodded and taken further,
18 relates to the current, as I've described it, bar on the
19 personal injury lawsuits.

20 By way of background, of course, last year
21 in Order 148/04 the Public Utilities Board had asked the
22 Applicant to study the effect on revenue and expenses of
23 lifting the bar on personal injury lawsuits in the
24 context of uninsured drivers, extra territorially
25 licensed drivers, and negligent manufacturers of motor

1 vehicles and motor vehicle parts.

2 And SM.8.10.3 of this years' rate
3 application filing is apparently MPI's response. That's
4 at page 35 to 38 at that tab.

5 Of course, I was prompted to ask the
6 question, where is the study on revenue and expenses and
7 I felt in many ways, as I sometimes will teach as a
8 sessional lecturer, that I had a delinquent student in
9 front of me because we went through and we had the
10 following excuses given to us.

11 Ms. McLaren said, at 1180 -- page 1182,
12 line 17, that, well at the bottom of page 37 there is a
13 line about not much financial yield.

14 All right, there's a line about not much
15 financial yield.

16 Mr. Bedard piped in at 1181, line 22,
17 saying, he thought that that was pretty much what the
18 Board had wanted and Mr. Galenzoski took, I think, the
19 closest to the dog ate my homework approach at page 1183,
20 line 5, saying, well, the Public Utilities Board never
21 complained.

22 Sadly, I did complain and I'm repeating
23 the complaint here. It's the submission of my client
24 that the reply as filed is inadequate and we would seek
25 the Board's recommendation, if not order in this case,

1 that MPI be required to undertake a proper study.

2 In the course of my cross-examination it
3 was clear that a -- such a study is both possible and
4 even promising. At page 1188 line 14, Ms. McLaren began
5 an overview of some of the issues that such a study might
6 consider.

7 And we found the following brief comments
8 that, even there, show that the study might be both
9 possible and promising.

10 If a Claimant is entitled to both PIPP and
11 tort damages, Ms. McLaren told us at page 1190 that
12 lifting the bar would increase MPI's expenses, if MPI
13 were insuring the defendant.

14 So, clearly, if we press this point, we
15 can see that lifting the bar in certain circumstances is
16 not such a good idea.

17 But then we went on at page 1192, line 21,
18 where Ms. McLaren said, if in fact the Claimant were not
19 entitled to both PIPP and tort damages, then it would
20 avoid costs for MPI and save MPI money.

21 And I suggest to you that any time that we
22 can implement something that may be able to save the
23 Applicant money, that would probably be reflected in
24 reduced premiums.

25 Mr. Bedard told us, at page 1193, that if

1 the Claimant had carriage of the litigation, it obviously
2 would not have an impact on MPI.

3 Similarly, he said at page 1194, line 2,
4 if the Claimant bore the costs of the litigation, again,
5 there would be no impact on MPI.

6 In short, I'm suggesting that this
7 overview of the issues suggests that a study, if done
8 properly, could come to some promising and useful
9 conclusions.

10 At page 1197, I had asked for an
11 undertaking that would, and My Learned Friend correctly
12 objected, broaden the extent of the information that the
13 Applicant had been asked to produce and that is to go
14 beyond personal injuries and ask about such expanded law
15 suits in the case of mere physical damage.

16 And I'll suggest that, given these
17 promising answers, that any new recommendation that the
18 Board may make with respect to MPI should expand the
19 scope of any study beyond personal injury, to also
20 include physical damage.

21 And I wish to emphasise that my client is
22 simply seeking to press for information. It might very
23 well come back that it's not a good idea on a rate making
24 basis, in which case this is an issue that my client
25 readily would agree should not be pressed.

1 As it stands, I suggest that the evidence
2 proposes that a study is both possible and may come to
3 promising conclusions.

4 Let me last turn to the question of
5 sustainability and how it applies to this particular
6 Board.

7 First, I have to confess that I made a
8 mistake when I was speaking in the course of cross-
9 examination. I always refer to pay-as-you-drive as the
10 rather ridiculous, drive-as-you-go.

11 I don't know what that means, except to
12 say that you're in a car.

13 If it's not drive-as-you-go, well then I
14 guess you're just a pedestrian.

15 Mr. Roberts, however, kindly pointed out
16 that everyone knew what you meant, so that was good. So
17 pay-as-you-drive is certainly what I mean to be talking
18 about.

19 I should say that my client, the Manitoba
20 Bar Association, takes no position on whether or not pay
21 as you go is a program that ought to be introduced in
22 Manitoba. It's clearly a very speculative proposal at
23 this stage and it's also very much too early for us to
24 understand how that would play out.

25 It's certain in the course of the

1 cross-examination that I conducted with Ms. McLaren,
2 especially at page 1202, that there are significant
3 privacy concerns that could arise if this program were
4 structured in a certain way.

5 It's also clear and I don't think that I'm
6 speaking in the form of any great revelation here, but
7 the question of how to apply the Sustainable Development
8 Act in the context of a public utilities oversight board
9 is beyond, really, the issues that merely pertain to this
10 particular Applicant.

11 I, of course, don't participate on behalf
12 of my client or any other way in some of the other
13 utilities that appear be this Board as part of their own
14 rate making.

15 I do, however, note that in the
16 Sustainable Development Act in the appendices that
17 follow, principle 1 talks about generally the way in
18 which there should be an integration of environmental and
19 economic decisions and I think this Board correctly
20 perceives that that vague suggestion has some application
21 to it, but it has really no notion of how it should go
22 further with that.

23 And similarly the Act in the next set of
24 appendices talks not about principles but guidelines
25 suggesting that public participation; Manitobans should

1 have some involvement. But again, the guideline doesn't
2 go very much beyond that.

3 It's difficult without knowing in great
4 detail the way in which this Act might affect other
5 utilities that are regulated to propose any specific
6 comments. I can, however, say that it's clear even in
7 the context of this particular rate application that the
8 Sustainable Development Act as it might be applied to the
9 way in which a public utilities board would function
10 certainly could have dramatic and substantial affects
11 upon the way in which the law in Manitoba is applied.

12 I think, for example, of the way in which
13 there might be a ruling by this Board that somehow
14 touches upon principles of insurance law or, as my
15 actuarial friends might tell me, principles of actuarial
16 science and unintendedly cause problems.

17 So what do I say in face of all of this?
18 If in fact this is a problem that is recognizable and it
19 extends beyond just this one (1) application, it might be
20 conceivable, and this is what my client recommends, that
21 this Board take time perhaps to sponsor not a hearing,
22 something much less formal.

23 I would call it for lack of a better word
24 a colloquium in which those affected utilities might come
25 together, explain how sustainability both works and does

1 not work within their particular model of business and
2 then invite interested persons from the public including
3 Intervenors or mere presenters to provide their own
4 comments and to ask questions.

5 And I think that this may to some extent
6 address Dr. Evans' earlier question of many of the
7 Intervenors as to whether or not they're prepared to do
8 anything and prepared to do a literature search, et
9 cetera.

10 I don't know if that kind of unilateral
11 unfocussed effort will sufficiently assist this Board in
12 trying to deal with, I think, an issue that is bigger
13 than probably the legislative -- legislature thought of
14 when they passed what frankly has to be an applaudable
15 act. It's great, sustainable development. I like it.

16 But what do we do and how do we do it?
17 The practicality is not in that legislation.

18 So, in any event this is the suggestion
19 that my client makes. It's disappointing in the sense
20 that I think this Board wanted a specific recommendation,
21 do "X" and the following consequences will flow.

22 I think from my client's perspective the
23 answer is we're worried, we see the big problem, we also
24 see the great promise, but the way in which we might go
25 about this is simply larger than it would affect this

1 particular Applicant.

2 So, in closing I certainly on behalf of
3 both myself as well as my client, The Manitoba Bar
4 Association, thank the Public Utilities Board and this
5 Panel specifically for granting my client standing.

6 I must say that having appeared before a
7 number of boards other than the Public Utilities Board,
8 I'm always impressed with both the preparation of this
9 Board as well as its attentiveness.

10 And I also think we should go on the
11 record and commend the staff of this Board which, more
12 than once, has tolerated what I'm sure they think are my
13 dumb questions, although they are far more polite than
14 that and they've also been very helpful.

15 I thank also the other Intervenors,
16 especially Mr. Williams, who has been exceedingly
17 helpful. And, of course, the cooperation and assistance
18 of the Manitoba Public Utilities, both witness panel as
19 well as its support staff.

20 I should indicate, just quickly, that we
21 will be making a request for costs. In passing, I can
22 simply say that it's submitted that our participation has
23 been meaningful and relevant.

24 We've worked to avoid duplication and
25 acted cooperatively. I, personally, have heeded the

1 suggestion of the Board when it granted Intervenor
2 status; that is to reduce my attendance and read the
3 transcript instead of being here.

4 I will say that that probably didn't work
5 very well. I would think that I would have gotten a
6 better sense and probably been a little more effective
7 had I been here. I missed, undoubtedly, comments like
8 which province has banjo pickers. I missed other issues
9 such as whether it's Mr. Palmer or Mr. Galenzoski who is
10 the more brilliant.

11 But, these are issues that are embedded in
12 the transcript for anyone to read. Happily, because of
13 these intentions to reduce attendance, Mr. McCulloch will
14 be happy to know that the costs request, which we'll file
15 only after the Board issues its order, will be
16 significantly lower than we had budgeted.

17 Failing any questions, that concludes our
18 submission.

19 THE CHAIRPERSON: Mr. Evans...?

20 MR. LEN EVANS: Thank you very much. I
21 always enjoy your presentation of the representative of
22 the Manitoba Bar Association.

23 Just two (2) points. You mentioned
24 independent advisors. Would you be suggesting -- or do
25 you suggest that they should have legal training?

1 MR. ROBERT DAWSON: I understand that
2 those who are providing independent advice at the
3 Workers' Compensation Board as well as at the Appeal
4 Commission are, for the great part, not legally trained.

5 I think, if I may say, that some of those
6 who provide that advice may require legal -- legal
7 training and maybe should be lawyers. But, by and large,
8 and again I rely less on the evidence here than on my own
9 personal work, I -- I supervise occasionally an inner
10 city drop-in clinic where we provide free legal advice to
11 people who have problems that are beyond what Legal Aid
12 can do.

13 And we find that the majority of the
14 people who come to us really are looking almost for, if I
15 can be blunt about it, a smarter, bigger brother.
16 Somebody who can go to bat for them and maybe has a
17 little bit -- has been a little more fortunate in the way
18 in which their lives have turned out.

19 And many of the people in the course of
20 the evidence that we -- or in the course of the cross-
21 examination that I elicited from Mr. Bedard, the people
22 who might actually benefit from claims advisors at MPI
23 are, for the most part, not the doctors and the lawyers
24 who have the mansions and who have a little sore on the
25 back of their neck.

1 organization or would you, sir, be prepared to look into
2 this matter a little more fully over the months and year
3 ahead?

4 MR. ROBERT DAWSON: Dr. Evans, the
5 Manitoba Bar Association always is willing to assist both
6 the government as well as any of its agencies whenever
7 issues of the public interest are involved.

8 So, if the Board were inclined, for
9 example, to put together the kind of gathering such a I
10 propose, if the Board were kind enough to extend an
11 invitation to the Bar Association, I think, and I have
12 not consulted my client, but I think it's fairly safe to
13 say that the Bar Association would be very supportive and
14 hopefully bring relevant and useful information to it.

15 Whether we have any comments as it stands
16 right now on pay as you go, my answer simply is, is
17 depends what we mean by that and I think until we have a
18 specific policy in place, it's very difficult to make
19 specific comments beyond speculation.

20 So, generally speaking, are we prepared to
21 be at the table if you have any questions or need further
22 assistance; absolutely, I think the Bar Association can
23 be counted on to provide that assistance.

24 MR. LEN EVANS: Thank you very much.

25 THE CHAIRPERSON: Thank you Mr. Evans,

1 thank you, Mr. Dawson.

2 I'm wondering, Mr. McCulloch, if it would
3 be helpful to you if we were to hear from Mr. Sousa first
4 and then we'd have a brief break and then conclude with
5 MPI's closing arguments?

6 MR. KEVIN MCCULLOCH: Mr. Chairman, at
7 some point I will need time to consult with various
8 members of the panel on some issues that were raised this
9 afternoon.

10 So that works for me if we let Mr. Sousa
11 go ahead and then take a break.

12 THE CHAIRPERSON: Mr. Sousa, how long do
13 you think you will be?

14 MR. CLAUDIO SOUSA: Mr. Chairman, I
15 shouldn't be more than fifteen (15), possibly twenty (20)
16 minutes.

17 THE CHAIRPERSON: Well that would be
18 fine, sir. Please proceed and then we'll take our break
19 then and allow Mr. McCulloch time to consult.

20

21 CLOSING ARGUMENTS BY MR. CLAUDIO SOUSA:

22 MR. CLAUDIO SOUSA: Thank you, Mr.
23 Chairman. Our organization, Scootering Manitoba
24 represents close to three hundred (300) moped and scooter
25 owners in Manitoba.

1 We were pleased to participate again in
2 this years' hearing without seeking an award of -- of
3 costs. Like the footprint on the environment, our
4 footprint on this hearing, we attempt to -- to minimize
5 both.

6 Last year we spoke about the importance of
7 environmental concerns which our organization has, and we
8 would like to commend the Board for taking the time at
9 this hearing to examine in detail, or at least in some
10 detail, whether MPI's current rate making methodology and
11 practices are in conflict or in harmony with the issue of
12 sustainable development.

13 Our members choose small engine
14 motorcycles for their low cost and low footprint on the
15 environment and we believe that there may be some unique
16 opportunities for MPI to encourage or reward smarter
17 environmental choices in terms of vehicles.

18 We do agree on some level with MPI that an
19 environmental reward program would likely need to be
20 directed by legislators. However, our organization does
21 feel quite strongly that MPI should continue to ensure
22 that its policies and practices do not conflict or
23 mitigate in any way such environmental reward programs.

24 Our organization has expressed one (1) --
25 and one (1) fundamental concern regarding this years'

1 rate application and that is the continued inclusion of
2 moped rental in the all purpose moped class.

3 We remain dedicated to educating our
4 riders and doing our part for road safety. This year,
5 with the introduction of the scooter safety course by the
6 Manitoba Safety Council, which was undertaken at our
7 initiative and with our assistance, we have a vehicle by
8 which people who ride and use scooters to get to work and
9 to school, can get themselves trained to a higher degree
10 and presumably safer on the road, resulting in lower
11 rates.

12 The inclusion of rental use in our claims
13 experience, makes the task or the goal of keeping our
14 rates lower more and more difficult.

15 None of our safety programs, nor those of
16 the Safety Council are going to influence or affect those
17 individuals who rent scooters for an hour of fun or a day
18 of fun.

19 To this point, I would like to read a list
20 before the Board. Scooter City on Main Street, Bill
21 Cycle in Steinbach. Phil's Scooter Town on Main Street
22 and Winnipeg. Scooter Junction in Selkirk, Manitoba.
23 Falcon Beach Rentals in Falcon Lake, Manitoba. Scooter
24 Boys Rentals, a mobile rental operator, frequenting
25 festivals and other summer events in Manitoba.

1 having a different risk. I may be mistaken, but I
2 believe that mopeds and motorcycles are one (1) of the
3 few if not the only classes under which U-Drive use is
4 not segregated to reflect this risk differential.

5 Our concern is heightened by the fact that
6 we view the moped classes claims experience as unique.
7 Why is it unique? It's unique in that just four (4)
8 accidents -- four (4) accidents -- are responsible for
9 nearly 40 percent of the entire claims experience over
10 the last five (5) years. Are any of these four (4)
11 accidents related to rental use? Possibly, we just don't
12 know. Neither our organization knows, nor does MPI in
13 their data.

14 No one can tell us whether any of those
15 exceptional accidents, which we can all agree would have
16 a significant impact on the claims experience of private
17 use, were due to rental.

18 Because rental use has not been segregated
19 our members are concerned that even just one (1) serious
20 accident coming from a rental fleet -- fleet will cause a
21 spike in our rates. Indeed this concern is warranted.
22 MPI has no data to confirm or deny which incidents in the
23 claims experience were attributed to rental use.

24 In the first round Information Requests
25 MPI did perform an analysis of corporate versus

1 individual ownership which, in our opinion, is not an
2 accurate proxy for understanding rental risk or rental
3 claims experience. Some of the operators I did list
4 operate as sole proprietors -- proprietorships or
5 unlimited partnerships, not as corporations.

6 However, if -- even if we do accept that
7 this proxy is valid and given that that sample we
8 recognize is small, MPI's analysis does suggest that the
9 loss ratio of bikes registered by corporate customers is
10 nearly double that of private use.

11 What we are asking for is quite simple.
12 MPI states, in their brochures and all of the literature,
13 that how you use your vehicle affects your rates.
14 Perhaps there should be a footnote to that that says
15 except when you rent mopeds for for-profit use.

16 Under cross-examination MPI was quite
17 clear that a Board Order to split this class would be
18 clear motivation to the Corporation to do so. Without
19 Board Order however there seems to be a mysterious
20 justification process that goes on within MPI to result
21 in a splitting of the class for U-Drive purposes.

22 Under cross-examination it was not clear
23 to myself nor should it be clear to the Board that there
24 was any clear criteria or process which exists to split
25 an all purpose class into U-Drive and private use.

1 Our organization appreciates the difficult
2 task that MPI has ensuring that all vehicle uses and
3 risks are segregated, but MPI does agree that the
4 creation of a U-Drive moped class would be relatively
5 simple; it would not bear significant cost.

6 Rates should reflect risk. This is what
7 we are told. For mopeds today this is not true. Today
8 our rates reflect those of rental use as well as private
9 use which are blended together in all purpose.

10 We respectfully ask the Board to order MPI
11 to introduce a U-Drive moped class and reclassify any
12 mopeds which are currently in use in rental fleets into
13 that class for future claims experience.

14 We thank the Board, Panel members, and
15 fellow Intervenors for the opportunity to participate in
16 the hearing. We hope to continue participating in future
17 years.

18 And that concludes my presentation, Mr.
19 Chairman.

20 THE CHAIRPERSON: Thank you, Mr. Sousa.

21 MR. LEN EVANS: Excuse me, very briefly.
22 I don't want to prolong the afternoon but I was going to
23 -- you may have mentioned it but I was wondering, have
24 you knowledge of experiences across the country?

25 Do you have U-drives as separate moped

1 classes in BC for instance, or Alberta or Saskatchewan?
2 Do you have that information?

3 MR. CLAUDIO SOUSA: Unfortunately, no,
4 Mr. Evans. Our organization, you can appreciate, we are
5 here purely on a volunteer basis. We have not had the
6 time or resources to research what other jurisdictions
7 do.

8 MR. LEN EVANS: Thanks.

9 THE CHAIRPERSON: Thank you, again. So
10 we'll stand down, Mr. McCulloch, to give you an
11 opportunity to consult and return. How much time do you
12 think you need?

13 MR. KEVIN MCCULLOCH: Mr. Chairman, I
14 think I would need about fifteen (15) minutes. I'm
15 anticipating that I'll get some answers from --
16 particularly from Mr. Palmer and Mr. Galenzoski.

17 The other thing that I should alert the
18 Board to is that I have a significant presentation to
19 make. Perhaps when we come back at 3:30 the Board can
20 give me some indication as to how long they have for the
21 rest of the day?

22 THE CHAIRPERSON: We'll stay with you,
23 Mr. McCulloch.

24 MR. KEVIN MCCULLOCH: Thank you, Mr.
25 Chair.

1 --- Upon recessing at 3:15 p.m.

2 --- Upon resuming at 3:35 p.m.

3

4 THE CHAIRPERSON: Mr. McCulloch...?

5

6 CLOSING ARGUMENTS BY MR. KEVIN MCCULLOCH:

7 MR. KEVIN MCCULLOCH: Mr. Chairman,
8 members of the Board, we're coming to the end of this,
9 our seventh full day of dealing with MPI's 2006 General
10 Rate Application.

11 And before I launch into my submission or
12 closing argument I wanted to alert the Board that you
13 might see some departures from the front bench as I go
14 on. I hope it's not a reflection on what I'm saying.

15 I know that Ms. McLaren has to be in
16 Toronto for a reinsurance meeting and Mr. Galenzoski has
17 -- is also another commitment that's required him to
18 leave. Just so that you know, if you see the changes.

19 My task as counsel for the applicant is,
20 first of all, to present MPI's position on the rate
21 application itself. This is the main purpose that we've
22 spent the better part of the last two (2) weeks together.

23 This year the proceedings also present a
24 number of important side issues which the Corporation
25 has, in my respectful submission -- or respectful

1 submission, rather, met head on.

2 As in previous years, I urge the panel not
3 to lose sight of the fact that evidence comes only from
4 the witnesses and that opinion comes largely from
5 counsel, myself included. But I think, particularly when
6 I get to the point of addressing comments made by Mr.
7 Oakes, this is an important distinction that I urge the
8 Board to keep track of.

9 Because no matter what counsel may think
10 and express by way of a view or an opinion, it should
11 only carry weight with the Board if there's evidence to
12 support it. And I, as I say, apply that same test to
13 what I say to you this afternoon, but please apply it to
14 what other counsel and what other Intervenors have said.

15 Let's start right off with rates. And, as
16 stated, the primary focus at these hearings is to look at
17 the rate application for the insurance year commencing
18 March 1st, 2006.

19 As is usual and has come to be expected,
20 Mr. Saranchuk, in his closing has done an admirable job
21 of detailing the effect of the rate application, how it
22 will impact various groups, et cetera, and there's no
23 need for me to repeat that because that's all I would be
24 doing is repeating what's already on the record.

25 We know that the standard which must be

1 met by the applicant has been freely acknowledged and
2 accepted by Ms. McLaren in her evidence, that MPI bears
3 the onus of proving its case to substantiate its rate
4 application. And, secondly, MPI has the onus to
5 establish that the rates are just and reasonable.

6 Through the evidence, and by that I
7 include; A, the pre-filed testimony of the four (4)
8 witnesses produced on behalf of MPI; B, the five (5)
9 volumes of materials filed in support of the application;
10 C, responses to the two (2) rounds of Information
11 Requests; and D, responses by the MPI Panel in cross-
12 examination.

13 It is my submission that through the
14 combination of all this evidence, I have no hesitation in
15 stating to this Board that the burden of proof has been
16 met.

17 Based on the sound rate making methodology
18 employed by MPI in this general rate application and
19 approved by this Public Utilities Board over the years,
20 there can be no doubt that the applied for rates are just
21 and reasonable. And I would refer the Panel in this
22 regard to the following key elements in the evidence.

23 Firstly, the evidence confirms that the
24 accepted rate making methodology has been applied to the
25 rates that have been put before you in this application.

1 Secondly, the applied for rates are
2 actuarially sound and statistically driven; that's been
3 confirmed by the expert evidence of Mr. Palmer.

4 And thirdly, and -- and this is an
5 interesting point, any elements that may be new to this
6 application have been identified by the applicant and had
7 been explained. And in that regard I'm referring to the
8 method by which the differential between the all purpose
9 motorcycle and the pleasure motorcycle rate was
10 calculated and explained to the Board.

11 There's a situation where the prior rate
12 making methodology didn't meet -- or didn't provide a
13 means of differentiating between those two (2) types of
14 motorcycle uses. And I'll get into more detail later,
15 but I just want to remind the Board that in his evidence,
16 Mr. Palmer explained to the Board how those rates were
17 established.

18 So basically we've got existing
19 methodologies, we've got actuarially sound and
20 statistically driven rates and where there is a
21 distinction or a new rate, we have an explanation in
22 evidence by the applicant.

23 The method that Mr. Palmer explained on
24 how to judge the all purpose and the pleasure use rate,
25 stated that in the absence of specific data to establish

1 a rate for these two (2) uses, the Corporation applied:

2 A) Results obtained from a survey of
3 motorcycle riders and owners that indicated how many of
4 them would fall into a pleasure class and how many would
5 fall into an all purpose class, and

6 B) The Corporation applied data from the
7 private passenger vehicle class where there are many
8 years of experience with an all purpose and a pleasure
9 use rate.

10 So that through the combination of that
11 information and while admitting that it may not be
12 totally actuarially driven and statistically driven, I
13 suggest that the applicant has given a sufficient
14 rationale to the Board for it to accept the rates that
15 are proposed for those two (2) motorcycle uses.

16 Taking this burden of proof further, I
17 would suggest to the Panel that there's really been no
18 serious challenge raised against the applied for rates or
19 the methodology employed to arrive at those rates. And
20 it's thing for the applicant to recognize that it has a
21 burden of proof but there's a corollary burden that
22 exists on those who would challenge the rates.

23 The burden that's placed on the
24 challengers is that it's not sufficient to pick at one
25 (1) element of the thousands of factors that go into a

1 rate application and say 'had you applied a different
2 factor or a different number to that element, then the
3 rate would have been different'; that's not sufficient
4 challenge or sufficient denial that the applicant has met
5 the burden of proof.

6 If an applicant wished to challenge a
7 factor, it's incumbent on them to bring evidence before
8 the Board to prove that the alternate factor that they're
9 putting forward, is the appropriate one to be used.

10 So in simple language, the point I'm
11 making is you can't just raise, nitpick at minor issues,
12 suggest that if a different approach was applied the
13 result would be different and then, at the end of the
14 day, argue that the rate has not been proven.

15 I would suggest that even in argument,
16 particularly by counsel for CMMG, there has been no
17 substantive challenge that would lead the Board to
18 determine that these rates were not fair and reasonable.

19 Now, in a perfect world, I would be more
20 than happy at this point to conclude by saying, and that,
21 Mr. Chairman, concludes the submission on behalf of the
22 applicant.

23 But as I indicated in my introduction,
24 this isn't a perfect world and I'm not going to get away
25 quite that easy. There are a number of important issues

1 directly connected to this year's application that have
2 to be addressed and I intend to go through them
3 individually.

4 Number 1 is DVL, the merger between MPI
5 and DVL. And I believe there are really two (2) sub-
6 issues that need to be addressed with respect to that.
7 The first has to do with the commission share cost
8 agreement and the second the progress of the merger,
9 including a discussion with respect to the master
10 agreement that was concluded and filed prior to the
11 commencement of these hearings.

12 On the share cost agreement, we have had
13 evidence, certainly at least in the last two (2) general
14 rate applications, last year and this year, that the
15 termination of that share cost agreement was a separate
16 and distinct issue totally apart from the merger of DVL
17 and MPI.

18 Now, you'll recall that this share cost
19 agreement was basically a payment that was made by the
20 government to MPI to help defer commissions that the
21 Corporation was paying to the brokers and the payment was
22 justified on the basis that the brokers were doing work
23 for the government with respect to the registration of
24 motor vehicles. And that's how the share cost agreement
25 arose.

1 It was evidence from last year's hearing
2 that that agreement had been in jeopardy for some years.
3 The Corporation had been advised on a number of occasions
4 that termination was under consideration.

5 This was a unilateral decision and
6 unilaterally imposed by the government largely due to, I
7 would suggest, the scrutiny that the DVL budget was under
8 when it went to Treasury Board for approval on an annual
9 basis.

10 And in the last number of years it's been
11 a fact that the DVL budget has not included sufficient
12 monies to cover the full cost of the share cost
13 agreement. And near the end of the calendar year 2003,
14 and this again was evidence largely given last year but
15 referred to in this year's hearing, MPI was advised that
16 payment for the final quarter of that year would not be
17 forthcoming and that no future payments would be made
18 with respect to the share cost agreement.

19 No negotiation, no failure on MPI's part
20 to make the argument that it ought to continue receiving
21 that payment. Purely presented as a done deal.

22 And I think Ms. McLaren's evidence this
23 year put perhaps the best descriptor on that; it's
24 something that the Corporation has to put behind it and
25 get on moving forward with the merger realizing that that

1 payment is not going to be continuing. And that's
2 exactly what the Corporation has done and it's reflected
3 that in its financial projections.

4 The second issue, and not only has
5 interest in this aspect of the DVL merger been indicated
6 by the Board, but also by -- by a number of the
7 Intervenors; questions have been raised as to how the
8 merger is progressing and, in particular, how the
9 Corporation views the master agreement that was concluded
10 between MPI and the Department of Transportation and
11 Government Services.

12 Work on the master agreement, you were
13 told last year, began shortly after the merger was
14 announced, and at last year's Hearing the Corporation
15 filed an interim agreement that addressed some of the
16 initial urgent issues that had to be dealt with in the
17 April 2004 time frame where the non-union staff were
18 being transferred immediately to MPI and functions were
19 being assumed by the Corporation.

20 It took significant time to come to a
21 final master agreement and if my memory serves me and I
22 know a copy has been filed in the evidence, I don't
23 believe the final agreement was concluded until April of
24 2005, certainly the spring of 2005.

25 There is significant provisions in that

1 agreement. The funding that MPI is to receive from the
2 Government, \$20.9 million, which basically represents the
3 DVL's 2003 budget less any provision for the share cost
4 agreement. That \$20.9 million is to be paid in
5 perpetuity and that was an important element as far as
6 the Corporation was concerned.

7 We wanted an indication in the agreement
8 that we weren't going to be at the table two (2) years
9 down the road being faced with a reduction in the -- in
10 the payment or having to re-negotiate the amount that was
11 being paid by the government. So we have in -- written
12 into the agreement the words 'in perpetuity'.

13 Now we all know that governments often
14 take action as they see fit. But at least it's an
15 indication, I think a strong indication that the
16 government was willing, and they knew why we wanted that
17 in there, willing to include that in the agreement that
18 this payment would be made in perpetuity.

19 There's also, as part of the agreement, a
20 clear indication that any savings that MPI can achieve
21 through efficiencies are to be to the benefit of the
22 Corporation. There's a provision if -- if a service is
23 discontinued, that we will renegotiate with the
24 government what portion of the \$20.9 million should be
25 reduced because of that discontinuance.

1 And I hesitatingly use this as an example,
2 but say for example, it was decided that driver testing
3 was going to be contracted out to the private industry,
4 then clearly there is a change in service that would
5 warrant the government coming to us and saying, Well
6 you're no longer doing driving tests -- driver testing
7 that's not an efficiency that you've achieved through the
8 merger. It's a -- a change in -- in the situation and we
9 want to renegotiate the \$20.9 million.

10 So that's in there. But the efficiencies
11 that we achieve through synergies stay with MPI. The
12 other important point and -- and this is one of the
13 reasons that the negotiations took some time, is that
14 government was particularly reluctant to give up issues
15 relating to policy.

16 They wanted to make sure that issues
17 directly affecting Manitobans' policy issues with respect
18 to driver licensing and -- and vehicle registration
19 remained with the government. MPI on the other hand was
20 concerned that policy decisions made by some future
21 government could unfairly drive costs to MPI.

22 So you'll see from reading the master
23 agreement that the government retains the right to set
24 policy, but they agree that they will do so only in
25 consultation with MPI. It's also agreed that if policy

1 changes are made by the government that directly impact
2 MPI's costs, we will negotiate with the government and
3 increase payment to cover those increased costs.

4 Operational issues are left entirely
5 within the control of MPI and, as I said, with the caveat
6 that there would be no reduction in services without
7 first consulting with the government.

8 On the basis of the negotiations and the
9 discussions that went on and confirmed by Ms. McLaren in
10 evidence, MPI is satisfied that the master agreement is
11 absolutely fair and reasonable.

12 We're convinced that the agreement as
13 drafted, will permit the Corporation to achieve the main
14 goal of the merger, which was that Manitobans would be
15 better served by the new model, by the combined
16 organization, better service, and as a result,
17 efficiencies would flow to MPI.

18 The word on the merger costs, you know
19 that the Corporation has conceded, in evidence, that in
20 the initial stages of any merger, costs are bound to
21 increase.

22 The Corporation further has provided
23 financial cost projections that the evidence has told you
24 is on a worst case scenario. Those financial cost
25 projections, which I think over the next three (3) or

1 four (4) years it's been said, total some \$40 million, do
2 not contain any allowance in those projections for
3 operational efficiencies, and it has also been confirmed
4 in evidence, the Corporation is committed to reducing
5 these projected losses over time.

6 That's been our position, the
7 Corporation's position from day one (1), continues to be
8 the Corporation's position.

9 However, from an accounting viewpoint, it
10 was important to be up front and transparent in
11 projecting or disclosing, rather, the projected losses;
12 that's why they appear as they do in the financial
13 projections.

14 One (1) final comment on the progress of
15 the merger. I believe it was the representative from CAA
16 that said, well you know, it's taken over a year already,
17 and it looks like it's going to take some time into the
18 future, and they were a little disappointed that the
19 merger was -- was taking that long.

20 I can indicate that the amalgamation began
21 immediately on the Government's announcement in April of
22 2004. Planning is moving along extremely well and there
23 have been significant achievements in the past year,
24 April of -- or past year and a half.

25 The first was the employee transition

1 agreement. The merger required that the two (2) union --
2 it's the same union, MGEU, but the two (2) bargaining
3 units, the one (1) that represents the DVL employees, and
4 the one (1) that represents MPI, along with the
5 Government and MPI, negotiate an employee transition
6 agreement.

7 There had to be provision for movement of
8 the employees who were civil servants, and under the
9 Government bargaining unit into the MPI bargaining unit.

10 That agreement was concluded in the summer
11 of 2004, and quite frankly the Corporation was very
12 pleased that things moved along that quickly. The Master
13 Agreement, as I said, was concluded in the spring of this
14 year.

15 And the other immediate hurdle that was
16 faced by the Corporation, had to do with the bringing
17 together of the job classifications of the two (2) work
18 forces. And that is an issue that hits directly to the
19 impacted employees.

20 The slotting of the former DVL employees
21 into the MPI pay plan and classification system, took an
22 awful lot of hard work by a great number of people over
23 this last year.

24 It is now in place, the appeal processes
25 have been followed and have been concluded, and with

1 certain income protections for a period of time for those
2 people who are going to be adversely impacted by moving
3 from the DVL pay scale into the MPI pay scale, all those
4 issues have been addressed.

5 Obviously the impacted employees have a
6 reaction and -- and a view on that, but everything has
7 been clearly explained to them, it's in place and I think
8 again, that -- that is a major achievement.

9 The other issue where the merger is -- is
10 progressing extremely well has to do with the business
11 process review, and we've -- we've heard a fair bit of
12 evidence on the business process review, particularly,
13 Ms. McLaren spoke to the fact that significant plans are
14 being developed, that this is a long term business
15 process review; that all functions of DVL are going to be
16 subject to the review as are many MPI functions.

17 There's no, sort of, taboo areas that
18 won't be looked at by the business process review.

19 The problem that we face at this point in
20 time is that government approval is required specifically
21 for some of the new term and long-terms plans that have
22 been drawn up. And, quite frankly, we're facing here a
23 timing issue.

24 I can tell you that if these hearings were
25 being held in mid-November, I would anticipate that the

1 Corporation would have, in all likelihood, been in a
2 position to provide specific details about these near
3 term and long-term plans. And that was a clear
4 inference, I would suggest, that you could draw from Ms.
5 McLaren's evidence.

6 Constraint that you can't disclose them
7 until approval is -- is obtained, but a guarantee that as
8 soon as approval is -- is obtained, there will be public
9 announcement and -- and the Board will be aware of that.

10 We're definitely moving forward in -- in
11 that area and it reminds me of some of those old
12 advertising gimmicks where you used to see a big
13 billboard that said watch this space, and then two (2)
14 weeks later they'd -- they'd disclose the campaign.

15 Well, that's the message that I'm bringing
16 to you this afternoon; watch this space and we anticipate
17 sooner than later there will be public detail. And
18 certainly by next year's rate application, the whole
19 impact of the business process review is going to be much
20 clearer to the Board.

21 There's been a fair bit of discussion
22 about investments and I'm moving into that area now; much
23 discussion, much evidence provided at the hearings with
24 respect to MPI's investment policies as well as MPI's
25 investment portfolio.

1 And the message that the Applicant wants
2 to bring to the Board and the message that the Applicant
3 wants this Board to draw from the evidence is that the
4 Corporation has strong governance in place with respect
5 to management of its investments.

6 And let's just take the time to review
7 that governance.

8 By statute, the Department of Finance is
9 charged with the responsibility of handling the
10 Corporation's investments. More last year than this
11 year, there was a fair bit of evidence before the Board
12 that the relationship between the Department of Finance
13 and the Corporation has improved greatly in the last five
14 (5) -- five (5) years, in particular, it may be even
15 before that.

16 There's an investment committee of the
17 Board that meets regularly. There is a group called the
18 Investment Committee Working Group which is made up of
19 representatives from Manitoba Public Insurance and from
20 the Department of Finance. That group meets on a regular
21 basis to address issues of policy, address issues
22 relating to investment.

23 And the recommendations from that group
24 then go to the -- the investment committee of the Board
25 for consideration and from the investment committee of

1 the Board to the full Board itself, for consideration.

2 You've seen copies of the investment
3 policy that have been filed in evidence. I would suggest
4 that the -- the policy shows a very detailed approach to
5 investments. It shows where the corporate concerns are
6 and how they're addressed.

7 And to add to the governance, we have at
8 MPI, an investment department. And you heard Mr.
9 Galenzoski talk about the qualifications of the people in
10 that investment department and the work that they do in
11 monitoring on a daily basis, the MPI investments,
12 particularly the equity side.

13 On making recommendations to the
14 investment committee working group, which the investment
15 department has representation on in any event. You've
16 heard the fact that the asset mix in the investment
17 portfolio, 75 percent bonds and 25 percent equities, is
18 reviewed on a regular basis and if changes are to be
19 considered, they will follow the governance and the
20 changes will be approved in the method that I have set
21 out.

22 Asset liability reviews are conducted on a
23 regular basis and are going to continue. The Corporation
24 has recognized its fiduciary responsibility with respect
25 to the investment portfolio.

1 In evidence, Ms. McLaren spoke about the
2 fact that funds must remain in that portfolio and be
3 invested wisely, so that at the end of the day monies
4 will be available to pay the benefits that claimants are
5 due.

6 The Corporation takes steps to match
7 duration to the investment policy statement. Equity fund
8 managers report regularly, not only to our investment
9 committee -- sorry, our -- our investment department, the
10 internal department, but also to the investment committee
11 of the Board.

12 Normally the investment committee of the
13 Board meets quarterly. And at each of those meetings one
14 (1) of the equity managers is there to explain their
15 performance, to justify their handling of the MPI
16 portfolio.

17 And, as I said, the internal investment
18 department maintains contact with the equity managers on
19 a regular basis so that compliance issues, if -- if one
20 (1) of the equity managers is outside the parameters of -
21 - of the investment policy, that's picked up by the
22 investment department and they're called to account for
23 that.

24 In her direct evidence, and I refer you to
25 that for reading at a later date, particularly in the

1 transcript pages 1225 to 1227, Ms. McLaren spoke about
2 the asset mix in the portfolio. And she spoke about the
3 trade-off, if you will, between maximising returns in the
4 short-term versus the fiduciary duty to provide benefits
5 to claimants in the long-term.

6 As well as addressing an issue of
7 potential -- inter-generational subsidization in the
8 event a higher risk mix were to be employed. So these
9 are issues that are addressed by the Corporation and by
10 the investment committee.

11 They are not issues that come up and
12 surprise us or grab us unannounced. And, again, the
13 message that I urge the Board to take away from the
14 evidence is that the governance is there, the investment
15 portfolio is being handled in a capable and responsible
16 manner.

17 And the final point, if I haven't already
18 make it -- made it, rather, is that the need to meet
19 projected returns which are included in the financial
20 projections and to maximize returns is carefully balanced
21 against the long-term obligation to clients and
22 claimants.

23 I'm going to move to the issue of the RSR.
24 And, once again, there are a number of components
25 involving the RSR and retained earnings arising out of

1 this year's hearings.

2 And it should be made clear up front that
3 it's the Corporation's position that the MPI Board has
4 the sole authority to set the RSR target. This is the
5 stance taken by the MPI Board and senior management.
6 It's been the stance that's been in place over the years
7 and there's been no movement, no change from that
8 position. And there's no change on a going-forward
9 basis.

10 The Board of MPI, along with senior
11 management is in the best position to determine the
12 capital needs of the Corporation and that's the policy of
13 the -- of the Applicant pure and simple.

14 Now, this year MPI has brought forward a
15 new target for the RSR and it's also brought forward a
16 new test to determine the appropriate target for RSR.
17 It's clear to everyone that the Corporation's target is
18 107 million at the low end to 214 million, based on 100
19 percent of MCT.

20 For a moment there I almost wished that
21 what Mr. Oakes said was not a mis-statement and that it
22 was two hundred and fourteen thousand (214,000) and then
23 we wouldn't have any issue. But clearly it's 214
24 million.

25 Now, Mr. Galenzoski, in his pre-filed

1 evidence, list -- listed reasons why the old target, the
2 old MPI target of 80 to 100 million set by MPI's board
3 was no longer adequate.

4 And it's also clear from his evidence that
5 we're not necessarily talking about new risks. There
6 isn't something new that's come on the horizon that has
7 prompted the Corporation to say we need a new RSR target,
8 rather we're talking about changes in the magnitude of
9 the risks.

10 And it's been put before the Board in --
11 in other final submissions as to what that evidence was
12 at pages 4 and 5. And I want to -- don't want to
13 belabour the point, but I do want to touch on some of the
14 highlights.

15 In Mr. Galenzoski's evidence he states
16 that higher retentions, higher re-insurance retentions on
17 casualty and catastrophe re-insurance programs means a
18 risk transfer back to the Corporation. And the evidence
19 is there that retention on the bodily injury files, PIPP
20 files, is now \$3 million per claim, whereas as early as
21 four (4) years ago that was only \$1 million. So there's
22 a transfer of risk back to the Corporation.

23 Mr. Galenzoski also identifies the
24 exponential growth of Basic insurance, unpaid claims
25 provisions, again largely due to the nature of the PIP

1 program. This is a long-term program.

2 It's not the type of Tort program where
3 hopefully within two (2) or three (3) years of a claim
4 arising you either have a judgment or a negotiated
5 settlement, you pay the claim and that's it. You write
6 "finis" -- it's done. These claims potentially can be
7 with the Corporation for the life of the Claimant.

8 In his evidence, Mr. Galenzoski points out
9 that just a 5 percent change in the \$1.1 billion
10 provision for unpaid claims would negatively impact
11 today, negatively impact financial results by 54 million.

12 Five (5) years ago that same 5 percent
13 increase in the provision for unpaid claims would only
14 have had a \$23 million impact. And looking forward five
15 (5) years that same 5 percent change in Basic insurance
16 unpaid claims provisions will have an impact of \$88
17 million.

18 Now, surely that's a clear indication to
19 this Board that there's a significant volatility in that
20 risk and that the magnitude of the risk is changing over
21 time, and it's only going in one (1) direction.

22 Can you really be satisfied that fifty-
23 five (55) to ninety (90) or 80 to \$100 million would be
24 sufficient reserve to protect against that sort of an
25 adverse impact?

1 There was discussion in the evidence, the
2 filed evidence, which would have been filed back in June
3 of 2005 that there was a potential change in risk due to
4 the mark-to-market accounting for gains in the investment
5 -- unrecognized gains in the investment portfolio.

6 And as some of the other presenters today
7 have -- have pointed out there's been a change in the
8 Corporation's position since June of 2005. At that time
9 it was identified as a potential increase in risk.

10 It's now clear from Mr. Galenzoski's
11 evidence that the Corporation no longer considers this an
12 issue that would drive the need for an increased RSR. It
13 appears that the change to mark-to-market valuation
14 should not adversely impact the Corporation's reported
15 financial results.

16 There are two (2) caveats on that of
17 course. It won't adversely impact the financial results
18 if it's not taken into account for RSR purposes and if
19 it's not taken into account for rate making.

20 So, subject to those two (2) caveats, the
21 Corporation is not suggesting that the mark-to-market
22 accounting is going to drive the need for RSR. However,
23 that doesn't change the fact that volatility in the
24 market remains a justification for establishing an RSR
25 and the more volatility, the higher RSR that's required.

1 You've been told in evidence that the
2 Corporation's projected returns are based on Canada ten
3 (10) year bonds, they're used as the -- the basis for the
4 equity income estimates, and there's certainly no
5 guarantee that the equity market will achieve that
6 standard, particularly as we saw in 2002 and 2003.

7 So, as recently as a couple of years ago
8 it was clear that the volatility in the investment market
9 was such that the Canada ten (10) year bond recovery or
10 return was not going to be achieved in the equity market.

11 The Corporation has indicated that all of
12 these factors point to the need for an increase in the
13 RSR target and the RSR range. Rate stability; can't lose
14 sight of rate stability, that is the main factor that the
15 RSR is intended to protect against.

16 And while I may comment further, when --
17 when dealing with some of the -- the submissions by
18 counsel. There appears to be in some of the evidence,
19 certainly that's put before the Board in previous years
20 and to some extent the -- the discussion today, there
21 appears to be some thought out there that MPI doesn't
22 really need a Rate Stabilization Reserve, because it's
23 got taxing power; that if rates or -- or if costs
24 increased 20 percent in one (1) year, well, next year you
25 just apply for a 20 percent rate increase. If they drop

1 Minimum Capital Test became the mandatory measure for
2 property and casualty insurers, subject to OSFI
3 regulation. And we also know that MPI is not subject to
4 OSFI regulation.

5 However, the evidence before this Board is
6 that the Corporation believes it would be prudent and
7 reasonable to examine the OSFI test and to apply it. The
8 evidence clearly indicates that MCT uses a risk based
9 formula for Minimum Capital Requirement, and it defines
10 the capital that is available to meet the minimum
11 standard.

12 I want to take issue with people who would
13 say, Well, that means it's a solvency test, because OSFI
14 deals with private -- private insurance companies that
15 are regulated by OSFI and that OSFI's concern is solely
16 solvency.

17 Well, you heard evidence, and -- and it
18 was introduced in cross-examination of -- of Mr. John
19 Todd, that in fact the industry itself has an
20 organization in place, PACICC, P-A-C-I-C-C, that
21 according to their website, is an organization of private
22 companies, private insurance companies, insuring homes,
23 cars, and other property of Canadians, working together
24 to compensate clients in the unlikely event of an
25 insurer's collapse.

1 Indicating clearly that even in --
2 insurers who meet the MCT test and they all have to could
3 still be faced with a situation where their policy
4 holders would be out of pocket if PACICC didn't exist.

5 And taking to heart my -- my warning about
6 not accepting evidence from counsel, I think I can give
7 you the indication that when MPI was in the general
8 insurance industry from 1975 to approximately 1989, we
9 were members of PACICC as far as the general insurance
10 portion of our business was concerned.

11 PACICC specifically excludes government
12 automobile insurers from being members of its
13 organization. But when we were in general insurance, the
14 Corporation was -- was part of PACICC.

15 Now precisely because it is a risk based
16 test MCT, the Corporation views that the MCT is an
17 appropriate test of capital requirements. Don't get
18 caught up in the solvency issue. Solvency concerns are
19 used to set the standard by which OSFI applies MCT.

20 So I'm asking you as -- as I led Mr. Todd
21 through in his cross-examination, to distinguish between
22 the validity of a test versus the level of the standard
23 imposed by the regulator. And from my reading of -- of
24 his evidence in cross-examination, Mr. Todd conceded that
25 there is a distinction between the test and the standard.

1 Now from the evidence educed, you know
2 that OSFI has set a minimum requirement of 150 percent
3 MCT for the insurers that it regulates. You also know
4 that the average fund held by those insurers stands at
5 224 percent of MCT. And that some insurers, Wawanesa in
6 particular, hold as high as 380 percent MCT.

7 So what is the MPI target? In AI-19, the
8 Corporation produced the MCT analysis that was prepared
9 by its external actuary, Jim Christie, and interesting to
10 note in that report, Mr. Christie takes the position that
11 the financial condition of the MPI is unsatisfactory in
12 the absence of meeting the MCT test.

13 And that test takes into account adverse
14 scenarios and a lot of the sort of calculation that was
15 being bandied about in -- in cross-examination of the MPI
16 panel and in -- in final submission. So that it's a risk
17 based, it is I would suggest, an empirical test, read the
18 -- the information from -- from Mr. Christie as to how
19 the calculation is prepared.

20 And the Corporation has chosen the target
21 of 100 percent MCT as the top of the range with 50
22 percent of that figure as the bottom end of the range.
23 So to use Mr. Todd's phrase, the trigger points for the
24 MPI range for the RSR would be 107 million to 214
25 million. And when those trigger points are reached,

1 either at the top or the bottom, remedial action is
2 required.

3 It's also interesting to note that Mr.
4 Todd's report provided a historical view of the setting
5 of the RSR target at MPI. And I want to deal with that
6 to some degree.

7 In 1988 the Automobile Review Commission
8 Kopstein Report, looked to and identified the need for
9 MPI to establish retained earnings, subsequently known as
10 the rate stabilization reserve. And at that point in
11 time, in 1988, the OSFI standard required reserves equal
12 to 33 percent of net premiums written.

13 So the same insurers who in 2005 are
14 required by OSFI to apply an MCT test back in 1988 were
15 required to have reserves equal to 33 percent of their
16 net premiums written.

17 That was the minimum. In his report,
18 Judge Kopstein recommended 15 percent of the OSFI test
19 and that was stated as a reflection of MPI's status as a
20 Crown Corporation; the fact that it did have the right to
21 appear before this Board to apply for rate increases, to
22 cover losses that might be occurred -- that might occur.

23 But it's also interesting to note that
24 Judge Kopstein didn't just set a figure of 15 percent, he
25 further set his own trigger points of 10 percent and 20

1 percent, and he said if the fund falls below 10 percent
2 of net premiums written, remedial action must be taken.

3 And if the fund rises above 20 percent of
4 net premium -- premiums written, remedial action must be
5 taken.

6 That clearly indicates that as far as --
7 as Mr. -- Judge Kopstein was concerned, in his view of
8 the need for an RSR and what level it should be at, that
9 18 or 19 percent, 17 percent of net premiums written
10 would have been absolutely acceptable; no remedial action
11 would have been required.

12 That's a significant -- significant range.

13 I'm suggesting to this panel, as I did to
14 Mr. Todd that Judge Kopstein did not reject the OSFI test
15 as being inappropriate or unapplicable (sic) to MPI, he
16 accepted the test and he modified the standard.

17 Very quickly, the next two (2) iterations
18 of -- of an acceptable RSR target test, again proposed by
19 the Corporation in appearing before this Board, was a
20 move to 15 to 20 percent of unpaid claims liabilities and
21 that was abandoned fairly quickly, due to the potential
22 of extreme variability from year to year.

23 Unpaid claims can move significantly. As
24 a matter of fact, a significant movement in -- in unpaid
25 claims is -- is one of the things that -- that might

1 trigger the need for an RSR, so that was abandoned.

2 The next iteration was the risk analysis
3 calculation including a separate component for investment
4 risk, called value at risk.

5 And this is the solution that was brought
6 forward by MPI to the Public Utilities Board and for a
7 good number of years was the subject of great debate and
8 discussion at these hearings to the point that, quite
9 frankly, I think the Board got fed up and said, that's
10 it, we don't want to hear from you any more on this,
11 unless you come to us with a change in risk.

12 The problem with the risk analysis
13 approach is that it was based on a number of assumptions
14 and all of those assumptions were subject to
15 interpretation and review and disagreement between the
16 various parties.

17 And just some of them dealt with whether
18 the elements that were looked at as part of the risk
19 analysis moved in imperfect or perfect correlation; the
20 various confidence levels that would be applied; should
21 operating expenses be included; should they not be
22 included; should some portion of operating expenses be
23 included?

24 All of this led to not the strict,
25 straight formula that some people, I think, would have

1 this Board believe, suggesting that this made in
2 Manitoba, or Manitoba only solution is somehow the holy
3 grail of calculating RSR balances.

4 I think that it's clear that the
5 Corporation's position is that in the MCT we have an
6 industry test. It's risk based and we have at 100
7 percent of MCT a modified standard.

8 And I think the Board needs to ask itself,
9 even though there's no requirement on MPI to follow the
10 OSFI MCT, why would it not, why would the Corporation
11 that's part of the industry that follows so many industry
12 practices, GAAP, accounting principles, issues like that,
13 why would we just discard the MCT because it happens to
14 produce a higher RSR requirement, perhaps than somebody's
15 analysis of the risk analysis.

16 And I think that's a warning point, I
17 would be concerned when I looked at the fact that I had a
18 Manitoba only solution that is not used by any other
19 insurer in -- in the country, and it produced a suggested
20 range that was significantly below the test that's used
21 by all private insurers in the country. That, I think
22 should give this -- this Board reason to pause and reason
23 to think about the applicability of the MCT.

24 The Board also has to address the question
25 as to whether it would be fiscally responsible and

1 prudent to substitute your own judgment on this issue,
2 for that of the MPI Board of Directors and senior
3 management. I think that's a fair question that the
4 applicant can put to the Board, a fair issue that the
5 applicant could put to the Board.

6 Now we've heard all about ICBC and their
7 use of MCT, and I want to give you the applicant's view
8 and position on that.

9 Even though in their annual reports, ICBC
10 seems to indicate that they have government backing in
11 the event of any significant financial loss, ICBC has
12 applied 100 percent MCT, as their retained earnings
13 target for their basic line of business.

14 We heard argument that, well, ICBC is
15 different from MPI, because the tin and glass, the
16 physical damage component, isn't part of their basic
17 program. They're in competition with that.

18 So, they have more -- they have more
19 competition, they -- they compete for the tin and glass,
20 they compete for the extension, all those -- those other
21 products. That's true. But it's also true that for
22 their basic compulsory program they use the same target,
23 100 percent MCT, that MPI is proposing.

24 Further tin and glass, their competitive
25 lines, they're at 200 percent, significantly different

1 than our situation.

2 Now it's also been acknowledged that the
3 100 percent MCT and 200 percent MCT was applied to ICBC,
4 at government direction. And the Corporation is clearly
5 aware of that, and -- and we have the -- the actual, I
6 believe the document's called IC-2, where the Government
7 imposed that standard and that test on ICBC.

8 It doesn't change the fact that it's
9 there, doesn't change the fact that it stands in the same
10 proposal for the basic line as MPI is suggesting.

11 We've also heard that Workers' Comp of
12 Manitoba uses an I -- an OSFI test to establish reserves.
13 Now, it may not be the same MCT, and it's been noted that
14 WCB is not involved in re-insurance, so the risk is -- is
15 different, but it also should be noted that according to
16 their website, the OSFI test that Workers' Comp applies,
17 has led them to establish reserves equal to 91 percent of
18 their premium revenue.

19 That's not the proposal that you see
20 before you from MPI, we're not looking for 91 percent
21 premium revenue, we're looking for almost a third of --
22 of that.

23 So, in closing on this issue, I would
24 suggest that the Corporation has established that MCT is
25 a reasonable standard, resulting in a reasonable target.

1 And I know you have many views to the contrary, but it's
2 an issue that -- that you're going to have to grapple
3 with, and I've put the Corporation's position as best I
4 can on that issue.

5 The next issue also related to RSR is the
6 issue of a surplus dividend, and it was a question that
7 the Corp -- or the Board rather, put to MPI at -- at the
8 close of Hearings, and the Board has the Corporation's
9 response as part of Exhibit Number 33.

10 And basically, what that exhibit says is
11 that based on the RSR target proposed by the Corporation,
12 there is no surplus dividend to distribute to ratepayers
13 at this point in time.

14 I think it's important at this time to,
15 again, highlight the policies that had been accepted by
16 this Board for the determination of when a surplus
17 dividend or when a special surcharge should be put in
18 place.

19 And that is that the RSR must either be
20 above or below, and I'll stick my -- leave my discussion
21 at a surplus discount because that's the issue that we're
22 facing today, the RSR must be above the target and it
23 must be earned and in the bank.

24 And that means, for our considerations
25 today, that the only amount available to the Board, if,

1 in fact, the Board decides a surplus dividend is
2 appropriate, is the 135 million that sits in the RSR as
3 at the end of February 2005.

4 And at this point I don't usually take
5 issue with -- with Board Counsel, but I think there's one
6 (1) point that I either have to take issue or perhaps get
7 -- want to clarify.

8 I understood Mr. Saranchuk to say that
9 because of the 20 million that was transferred from SRE
10 and extension in March of 2005, that that one hundred and
11 thirty-five thousand (135,000) might really be -- sorry,
12 135 million might really be 155 million.

13 It doesn't fit with the policy. It
14 doesn't fit with the -- the -- the approach that's being
15 taken by the Board. If we are looking at a figure it's
16 the \$135.7 million that sits in the RSR.

17 The other -- and the reason I say you
18 can't take the -- the -- the transfers from SRE and
19 extension is that they're made in the -- in the current
20 fiscal year and the current fiscal year has not yet
21 closed and we're not sure whether those monies will still
22 be there at the end of the current fiscal year.

23 The other interesting point that I wanted
24 to draw to the Board's attention has to do with what
25 target should be used if, indeed, the Board decides a

1 surplus dividend will be paid.

2 I think you've had at least three (3)
3 proposals put forward today. One (1) was that the range
4 should stay at fifty (50) to eighty (80) and that any
5 dividend should be paid on the basis of the Board's
6 stated range, not adjusted for inflation.

7 You had evidence from Mr. Todd, and I
8 think it was reflected in the presentation by Mr.
9 Williams, that doing a quick calculation and adjusting
10 for inflation which was conceded in the Board's order
11 last year, that that range is really fifty-five (55) to
12 90 million.

13 And then, of course, there's the MPI then
14 approved target back in -- in February of '05. The
15 target then was eighty (80) to 100 million. And the
16 interesting point that I thought I would bring to the
17 Board's attention is that the only experience we have
18 with a surplus dividend relates to December of 2000.

19 When, in Board Order 151 of 2000, the
20 Board ordered a surplus dividend of \$75.4 million be paid
21 back to ratepayers. This order is interesting from --
22 from a number of points. First of all, it was based on a
23 projection. It wasn't a situation where we were looking
24 at the previous fiscal year where the money was in the
25 bank confirmed and that's the basis that the -- the

1 surplus dividend was determined.

2 This was actually a forward-looking which
3 would, today, be contrary to the policy accepted by the
4 Board. But, in any event, the Board ordered a seventy-
5 five point four (75.4) surplus dividend.

6 And the impact of that was to reduce the
7 total basic RSR to one point one (1.1) -- or, sorry,
8 \$101.9 million. So, in effect, at that time, even though
9 the Board's target was fifty (50) to 80 million they
10 didn't order a surplus dividend for everything over 80
11 million. They ordered a surplus dividend for the amount
12 over the MPI Board's target of eighty (80) to a hundred
13 million.

14 I'm going to move now to the -- oh, it
15 should go without saying, despite the -- the discussion
16 of surplus dividend, the Corporation's position remains
17 that the target should be accepted at 214 million, and
18 that no surplus dividend should be paid.

19 Moving to the IIP, the Immobilizer
20 Project. The Corporation, for a number of years, has
21 been struggling with the fact that auto theft is a major
22 problem in Winnipeg, and to a lesser extent a problem in
23 the rural areas. Significant costs are incurred year
24 after year to pay total theft claims, partial theft
25 claims.

1 And especially with some developments that
2 have happened in the last year or so, there's an
3 increasing potential for bodily injury claims arising out
4 of stolen automobiles. This is the issue of thieves who
5 turn these stolen vehicles into unguided missiles, by
6 placing a cement block on the accelerator and letting
7 them run loose down the street, risking property, life,
8 limb, whatever.

9 So, this is not just an insurance problem,
10 it's been recognized that it's a societal problem and
11 that it has an impact on all Manitobans. It doesn't just
12 impact the individuals who belong to the private
13 passenger vehicle class where most of these stolen
14 vehicles come from.

15 It doesn't just impact people in Winnipeg,
16 it impacts all of Manitobans.

17 In previous years the Corporation gave
18 evidence before this Board that it felt it wasn't the
19 sole owner of the auto theft problem. That there were
20 other elements in Manitoba who ought to take some
21 ownership of auto theft. And the Corporation worked long
22 and hard to bring those elements together to try to
23 communicate effort -- or to get cooperation, coordinate
24 efforts and have a joint approach to defeating auto
25 theft.

1 It wasn't working. The -- the numbers
2 continued to rise, the incidences of -- of auto theft
3 continued to go up.

4 So, as indicated at last year's Hearing,
5 the Corporation decided that it was going to have to step
6 up to the plate and solve this problem. And there had
7 been a number of significant steps that the Corporation
8 has taken to address the issue of auto theft.

9 Internally, the position of Director of
10 Auto Theft Prevention has been created, reports directly
11 to the president, and has responsibility for coordinating
12 the efforts of all the stakeholders. So we're still
13 working with the City of Winnipeg, RCMP, Department of
14 Justice, but we're recognizing the fact that we're
15 willing to take the lead role.

16 You've heard about the interim measure,
17 the Winnipeg Auto Theft Suspension Strategy, two (2) year
18 pilot, based on the experience in Regina, where offenders
19 and a targeted group of offenders who are, as a result of
20 being convicted of auto theft, put on curfew and other
21 restrictions, are being monitored on a regular basis to
22 ensure that they're living up to the terms of their
23 curfews, and if they're not, that they are immediately
24 apprehended and brought back into the judicial system.

25 There's evidence before you that it's

1 costing MPI approximately nine hundred thousand dollars
2 (\$900,000) a year for this two (2) year project, but that
3 the cost to other stakeholders, particularly the
4 Department of Justice, is considerably high as well.
5 They're having to process these people through the
6 Courts. In -- in many instances they're having to detain
7 them in youth centres.

8 So this is a truly cooperative approach
9 focussed on the worst offenders. And as Mr. Bedard said
10 in his testimony, in response to questions on cross-
11 examination, there appears, in the last number of months,
12 to be a decline -- there is a decline in the auto theft
13 experience in Winnipeg, and that I believe he said he was
14 cautiously optimistic that this program had already begun
15 to show results.

16 The difficulty with that program is that
17 it is an interim measure, it's a stop gap measure, while
18 something more permanent is put in place. And that
19 something more permanent is the long term measure, the
20 Immobilizer Incentive Plan.

21 The Corporation determined that the surest
22 way to stop auto theft was to make it impossible for the
23 vehicles to be stolen. Now Transport Canada has reached
24 that same conclusion but they have put in place a
25 requirement that, commencing in 2008, all vehicles must

1 come with a factory installed immobilizer. That doesn't
2 provide much of a solution for Manitoba.

3 Number 1, it's some three (3) years down
4 the road in any event, and number 2, due to the average
5 age of the Manitoba fleet which is running somewhere in
6 the neighbourhood of fourteen (14), fifteen (15) years,
7 it would take until 2023 or beyond before we had any real
8 chance to see the entire Manitoba fleet immobilized.

9 So the Corporation established the
10 Immobilizer Incentive Plan, negotiated a fixed cost two
11 hundred and eight dollars (\$280) covering purchase and
12 installation of an immobilizer. MPI pays half up front,
13 hundred and forty dollars (\$140) and is willing to
14 finance the balance hundred and forty dollars (\$140) over
15 five (5) years by way of an interest free loan.

16 And that's why I was a little confused by
17 one of the comments that Mr. Roberts made when he was
18 talking about the immobilizer program and he said, Well
19 the up front cost could be a deterrent for some of the
20 poorer members of society. But there is no up front
21 cost, there's no need for anybody to incur an up front
22 cost.

23 And over and above that, once they install
24 the immobilizer, they get a reduction of forty dollars
25 (\$40) a year on their annual Autopac premium. So they're

1 netting twelve dollars (\$12). It seems to be a win/win
2 situation. It's been described definitely as a novel
3 approach. It's been described as unique to Manitoba.

4 And it seemed to me that one of the
5 interveners was suggesting that that made the program
6 somehow less acceptable or -- or more questionable. I
7 totally disagree. I think that this applicant has shown
8 the lead in many instances in the insurance field and --
9 and this is just another instance where MPI's out front
10 leading the way.

11 Now, it has been identified that one of
12 the issues is that it's a voluntary program. And as long
13 as it remains a voluntary program, the Corporation is
14 going to have to work very hard to bring the right people
15 to the table.

16 But again, you've had evidence before you
17 that the uptake in -- since the program was -- was
18 announced in the summer has been very encouraging, that
19 capacity is increasing almost daily so that the -- the
20 ability to meet the demand is -- is there if not -- or
21 almost there, will be there very shortly.

22 And also that the Corporation has a number
23 of -- of plans in place to ensure that the owners of
24 those one hundred (100) most at risk vehicles come into
25 the plan. So for the time being the Corporation is going

1 to continue with the voluntary program.

2 The Corporation has given a commitment to
3 this Board and elsewhere, that it will report on
4 progress, it's tracking progress. I can tell you
5 everyday a screen pops up on -- on my computer that tells
6 me how many people phoned yesterday and -- how many
7 appointments are available.

8 So all of this information is within the
9 Corporation's control and for that reason the Corporation
10 is -- is willing to follow the program and see how it
11 unfolds. Specifically when we start making the specific
12 contacts to the -- the individual owners. And that will
13 be reported on.

14 There's also been some question with
15 respect to the fund itself.

16 The Corporation disagrees with Mr. Todd
17 that retained earnings are not the appropriate source of
18 funds to back this Immobilizer Program.

19 And we also disagree with his analysis
20 that this is really an investment. The position that the
21 Corporation takes and the questions were put to Mr. Todd,
22 and I believe this is the point that Mr. Williams said
23 his client disagreed with Mr. Todd's position, is that
24 this isn't an investment.

25 It's not like an investment in a building

1 where you have an asset at the end of the day or a -- an
2 IT system where you certainly hope you've got an asset at
3 the end of the day.

4 This is money flowing out. This is money
5 that eventually will have a positive impact on the
6 Corporation's claims experience but other than that
7 impact, the Corporation doesn't have any concrete asset
8 in its hands as a result of spending this money.

9 There's been plenty of discussion about
10 the accounting approach and I think that you've got
11 clearly on the record that the method that the
12 Corporation has used to account for this immobilizer fund
13 is according to the GAAP principles.

14 And also that the reason the Corporation
15 chose this approach was to provide transparency and
16 clarity. And when you look at the financial statements
17 and the projections going forward it's identified right
18 up front.

19 It shows the fund. It shows how it's
20 being depleted. Readily apparent to anyone reading the
21 financial statements as to how this money is being spent.

22 And for that reason, and I think it's a
23 valid reason, the Corporation chose not to include these
24 expenses as part of normal operating expenses which would
25 be much less transparent and much less clear.

1 So, again, I think that the evidence and
2 really the approach taken by many of the Intervenors is
3 an acknowledgment that this is a good program. They
4 might have done it a little differently. They might have
5 found, you know, a different approach.

6 But no real challenge to the validity and
7 -- and the benefit that this program will provide to all
8 Manitobans. There's some issues with respect to, are
9 some people subsidizing the program because they don't --
10 their vehicles don't qualify. Motorcycles don't qualify
11 and some large trucks don't qualify.

12 Well, I recall Mr. Oakes giving evidence
13 through -- not giving evidence, but making the comment
14 that most motorcyclists own motor vehicles. So, to that
15 extent, in any event, they're able to benefit from the
16 program.

17 The fact that theft experience is lesser
18 in rural areas doesn't preclude rural residents from
19 taking advantage of the program. It's open to all. It's
20 not restricted to Winnipeggers. It's not restricted to
21 high risk vehicles. It's open to all.

22 So if there is any subsidization, I would
23 suggest that it's very minor. And, what's more, when you
24 accept the fact that this is a societal problem that
25 impacts all Manitobans, it's not really subsidization;

1 it's a reflection that this is a major issue for all of
2 the province.

3 I'm moving now to comments and reflections
4 on positions taken by the Intervenors in -- in their
5 closing argument.

6 And starting with CAC/MSOS --

7 THE CHAIRPERSON: Mr. McCulloch, if I may
8 ask, how much more time do you think you'll be going?

9 MR. KEVIN MCCULLOCH: I expect, and I'm
10 not the best estimate of time, but I expect a half an
11 hour.

12 THE CHAIRPERSON: Then we'll just take a
13 five (5) minute break right now.

14

15 --- Upon recessing at 4:53 p.m.

16 --- Upon resuming at 5:04 p.m.

17

18 THE CHAIRPERSON: Any time you're ready,
19 Mr. McCulloch.

20 MR. KEVIN MCCULLOCH: Yes, Mr. Chairman,
21 as I indicated, I'm moving to responses to some of the
22 items raised by counsel or Intervenors in their closing
23 submissions.

24 And I'm by no means going to touch on
25 every issue. I'll try to restrict it to -- to issues

1 that I think are -- are of importance in connection with
2 this rate application.

3 Starting with Mr. Williams and his
4 presentation on behalf of CAC/MSOS. My comments with
5 respect to the risk analysis earlier in -- in my
6 presentation go to respond to Mr. Williams' statement and
7 position taken on the risk analysis.

8 As I indicated, this is an analysis that's
9 based on a number of assumptions, all of which are open
10 to challenge and debate and it's not as has been
11 suggested by both himself and Mr. Oakes, an issue that
12 provides, sort of, an agreed formula, the magic answer to
13 what an appropriate RSR would be.

14 I'm concerned with some of the comments
15 that Mr. Williams made with respect to how MPI arrived at
16 the MCT calculation. I would suggest that there's
17 absolutely no evidence before this Board that these
18 numbers were pulled from the air as he would have
19 suggested.

20 The basis of the calculation is clearly
21 set out in the applicant's evidence. We applied a --
22 we've attached a copy of the report prepared by the
23 external actuary and it's -- it's clearly obvious that
24 this is an empirical analysis of a -- of our
25 Corporation's capital requirement.

1 Mr. Williams, I believe, dealt with an
2 issue that he took from the evidence of our strategic
3 research area where it talked about the emotional
4 approach or an emotional appeal in various safety -- road
5 safety advertising and issues.

6 And he seemed to be suggesting that the
7 comment in that strategic research report was identifying
8 emotional appeal as the basis on which resources were
9 allocated.

10 I would suggest that the appropriate
11 reading, and I'll leave it to the Board to read that
12 portion, I believe it appeared, I'll give you the tab
13 reference, Tab 23 of the CAC/MSOS book of evidence,
14 response to second round number 18.

15 But if you read that, I'd suggest that
16 what is being referred to in that -- in that comment is
17 that this is a research term that describes the top of
18 the mind response that you're eliciting from the people
19 who are being polled.

20 So it describes the emotional appeal of
21 the -- of the commercial or the road safety message.
22 It's not talking about the means for measuring the
23 effectiveness of the road safety message.

24 I'm interested with respect to the
25 comments made by Mr. Williams with respect to driver's

1 education and, again, I believe that there was evidence
2 before this Board, either last year or perhaps the year
3 before, that the very researcher who had done the study
4 for MPI had indicated that crash analysis and injury
5 frequency are not appropriate measures for the success of
6 a Drivers' Ed program.

7 And Mr. Williams seemed to be criticizing
8 the Corporation for not catching that data as a means of
9 analysing the efficiency of its Drivers' Ed program.

10 I think there's also been evidence before
11 the Board that that same expert is working on a revised
12 curriculum and there will be in that curriculum measures
13 to assess the effectiveness of the program.

14 I think the other thing that must be said
15 when we're talking about Drivers' Ed is that I want to
16 remind the Board, and I don't think any of the present
17 panel would have been on the Board at that time, but some
18 years back in the mid-'90's the Corporation and through
19 its Board of directors, took the decision that it would
20 abandon its support and its sponsorship of the Drivers'
21 Ed program on the basis that they couldn't establish a
22 cost benefit analysis of the program.

23 And the absolute uproar from Mr. William's
24 own clients, the consumers of Manitoba, forced a reversal
25 of that decision and made it quite clear that Manitobans

1 expect MPI to deliver a Driver's Ed program for their
2 children. And you can't lose sight of that, and you
3 can't ignore that.

4 There were comments made with respect to
5 Mr. Bedard's evidence that the Transport Canada 2010
6 Report, was showing a decline in serious injuries and
7 deaths in Manitoba. And Mr. Bedard did give that
8 evidence, indicating that this came from a 2003 Transport
9 Canada Report.

10 And the other issue, and again I want to
11 be careful on this one (1), but I believe this has been
12 discussed in previous Hearings, and -- and it may sound
13 strange, but there are actually different ways of
14 counting fatalities.

15 The Corporation in its counts, includes
16 individuals who may die months after the accident, but
17 resulting from injuries suffered in the accident. The
18 Corporation also includes non-residents who suffer fatal
19 automobile injuries within Manitoba. And I believe
20 there's been evidence before the Board that Transport
21 Canada doesn't count fatalities in the same manner.

22 There was also discussion as to the
23 methodology for calculating the volume factor, that was
24 an issue that Mr. Williams raised. And I'm advised that
25 the methodology is clearly set out in the Corporation's

1 materials, TI-19.

2 The other item that I misspoke myself, and
3 I have to correct on the record is that I suggested that
4 the average age of the fleet in Manitoba was fourteen
5 (15) to fifteen (15) years, it's actually nine (9) years.
6 So it would move the -- the period from 2023 to
7 approximately 2019, if my math is correct, or '18, in
8 that area.

9 There's one (1) other issue that I want to
10 -- and this is one (1) that -- that I think is important
11 in -- in Mr. Williams' submission that -- that I want to
12 correct.

13 He referred to a response provided with
14 respect to CAC/MSOS-1-3, that he said disclosed how the
15 current RSR surplus of \$135 million was achieved. And he
16 broke it down into four (4) components.

17 He identified an RSR surcharge of 55
18 million, profit on operations of 150 million, or is that
19 profit on gain, I'm reading Mr. Galenzoski's handwriting.
20 Sorry, that's profit on basic, 150 million. Transfer
21 from extension 4.3 million, and transfer from SRE, 48
22 million. And he says that's how that was accounted for.
23 Take off of course the -- the surplus dividend.

24 In fact, if you look at his very own -- or
25 the response to his very own Information Request, the --

1 the correct figures are that first of all we started off
2 in this time frame and it goes back to 1989/90, with a
3 deficit of 7.8 million in the RSR. The RSR surcharge did
4 account for 55 million.

5 Profit on basic was 62.5 million, and when
6 you then take off the surplus dividend of 80.3 million,
7 you're left with 29.5 million. So that's the -- the
8 basis for that 135.7. You then add to that the 48.2
9 million from SRE, he had that figure right.

10 But in fact, the transfer from extension
11 was not 4.3 million, it was 58.1, because there was a --
12 a specific transfer in 1992/93 from extension.

13 So, really the -- the SRE and the
14 extension transfers far and away constitute the -- the
15 amount of that \$135 million, and other operations only
16 accounted for \$29.5 million.

17 Again, I think it's -- probably not much
18 turns on it but it's -- it's an important correction to
19 be made, in my mind.

20 The last thing I want to mention about Mr.
21 Williams' submission deals with his parent suggestion
22 that the Corporation should appear at next year's rate
23 application to justify the collective bargaining contract
24 or the contract rather with its employees that's achieved
25 through collective bargaining.

1 I note Mr. Rodger's, our VP of Human
2 Resources was sitting here at the time. I don't know how
3 he would react to having someone else at the table, but
4 it seems to me that the contract will be what the
5 contract is. And I don't think the Board should ask the
6 Applicant to justify the result of its collective
7 bargaining process.

8 I want to move to comments from the
9 counsel for CMMG. Quickly we're looking for 12.7 percent
10 from the motorcycle class. The preliminary opinion
11 provided by Mr. Palmer was that the loss transfer ordered
12 in June would, in all likelihood, have a positive impact
13 but not a particularly large impact on the motorcycle
14 rates.

15 It should also be noted that Mr. Palmer's
16 opinion was predicated on the understanding that the
17 twelve point seven (12.7) would be granted this year. So
18 clearly if the twelve (12) -- if the freeze that Mr.
19 Oakes is suggesting should go in is -- is acted on, then
20 that projection by Mr. Palmer is -- is not reliable.

21 Loss transfer won't take effect until
22 March 1 of 2007. The indicated rate for March 1, 2006
23 for motorcycles shows an 18.3 percent rate requirement.
24 The 12.7 percent which is the result of the capping
25 provisions that are set by the Board brings that down to

1 -- to 12.7 and that is required. And the Corporation
2 feels that there's no justification for freezing that
3 rate for, in effect, a full year before the impact of
4 loss transfer will be felt.

5 I also want to generally talk about an
6 issue that -- that arose through Mr. Oakes' evidence or -
7 - or cross-examination rather, and was one though that
8 really impacts the entire Hearing.

9 Mr. Oakes produced two (2) tables to be
10 used as part of his cross-examination of the MPI Panel.
11 One of them at Tab 19 of his Exhibit Book, Table 2, was
12 the charting of the rate line for motorcycles. As
13 pointed out, once the Corporation had a chance to check
14 that, that had failed to include Rate Group zero, which
15 happens to be the largest rate group in the motorcycle
16 pool.

17 And when the Rate Group 0 was added to
18 that graph, it made a significant difference in the -- in
19 the shape of the graph and I would suggest significantly
20 undermined the point that Mr. Oakes was attempting to
21 make.

22 The other exhibit and -- and I don't have
23 a number for it, but I think the Panel will probably
24 remember it, had to do with some mathematical
25 calculations that had been put together and presented to

1 been his practice and it has resulted in changes to the
2 figures as he had calculated them. And it makes for a
3 much more meaningful cross-examination.

4 The next area and it -- it fits into the -
5 - the comment that I just made about producing
6 information on -- at the last most moment before the
7 Panel. Mr. Oakes brought forward some transcripts from
8 the ICBC rate application.

9 And basically the purpose of that was to
10 suggest that the MCT calculation when it looked at the
11 allowance for unrealized gains at -- you're allowed 50
12 percent from your -- your capital requirement, was in
13 fact a reflection of the requirement to pay income tax.

14 And -- and he had, as part of that
15 transcript, an indication from one (1) of the witnesses
16 that they'd spoken to OSFI and yes, there was an income
17 tax consideration in there.

18 Mr. Galenzoski then countered with
19 evidence that he had spoken to our external actuary.
20 And, in fact, the external actuary said, No, it's got
21 nothing to do with income tax, it has everything to do
22 with market volatility.

23 Again, acknowledging that I'm not giving
24 evidence I'm just going to suggest that if Mr. Oakes --
25 and if his -- if the Board is interested in doing it, had

1 checked further with the record the transcript from the
2 proceedings in British Columbia, they would have found
3 that, in fact, there was confirmation that income tax was
4 not something to be taken into account and that OSFI had
5 given the opinion that if in fact one (1) of the
6 companies it was regulating was not liable to pay income
7 tax, that they still would not allow a greater reduction
8 than 50 percent, primarily because of market volatility.

9 So I think those sorts of issues could be
10 avoided if there was sufficient opportunity to examine
11 the material and it -- it's a rule that would apply to
12 MPI counsel in cross-examination as well.

13 Enough said about that. The rest of -- of
14 Mr. Oakes' presentation, and I'm not going to go through
15 it line by line, but I think it's worth highlighting. He
16 raised a number of questions, no evidence, a number of
17 questions as to the applicability of, for example, the
18 ICAC and -- and he said if -- if you changed an
19 assumption it would -- it would lower the rate by seven
20 dollars (\$7) or the -- or the assumption that you've
21 used has raised the rate by seven dollars (\$7).

22 I think it has to be made clear that the
23 requirement for an ICAC provision exists, the Corporation
24 is required to -- to disclose that and it must be booked
25 and it gets sign-off from the external auditor.

1 The same has to do with the PFAD; that's
2 an actuarial requirement that must be calculated, must be
3 disclosed. And the actuarial standards that -- that bind
4 not only the internal actuary but the external actuary
5 require that you discount reserve -- discount the claims
6 and apply a PFAD.

7 So these are issues that really can't and
8 shouldn't be subject to the type of cross-examination
9 where you say we think you should have -- you could have
10 used a different assumption. We think this is
11 appropriate -- inappropriate.

12 All of these issues have been properly
13 included. They're there to meet either GAP, actuarial
14 standards, or accounting standards and auditing standard
15 requirements. They're there, and without them the
16 Corporation wouldn't get the sign-off from their auditors
17 and the actuaries.

18 And by getting the sign-off it indicates
19 that the Corporation has done the calculation in
20 accordance with allowable and acceptable practice and --
21 and shouldn't be subject to -- to the sort of challenge
22 that it was put to.

23 I'm going to move very quickly to the --
24 the MUCDA presentation. Again, they spent a lot of time
25 questioning the IIF. I don't agree with -- I think we've

1 answered the -- the challenges to the accounting approach
2 taken with respect to the -- the IIF.

3 We have indicated that the calculation
4 that they did, and this was in response to -- to cross-
5 examination by the MPI panel that, in fact loss of
6 interest revenue had been included in the calculation of
7 the cost of the immobilizer fund.

8 And the loss of revenue was considered by
9 not built in to the cost of the loss related to the
10 reduction in premium which is a reduction that everyone
11 who buys a new vehicle that has a factory-installed
12 immobilizer also gets. So that was, I believe, the
13 explanation given by the panel as to why that wasn't
14 factored into the costs.

15 Another issue, Mr. Roberts was suggesting
16 that somehow the dealers had been subsidizing the
17 program. In effect, the dealers rates had been -- or
18 that they had contributed -- sorry, that was his point,
19 they had contributed to the surplus and -- and were
20 entitled to share in the surplus dividend.

21 I think it's clear that the rates charged
22 to dealers have been insufficient for a number of years
23 and that's why their rate increases are being requested.

24 Again, I think it's fair to categorize
25 both the -- the cross-examination that Mr. Roberts

1 conducted and the -- the final submission as falling into
2 the category of, if I pick at enough little items I might
3 convince the Panel that the whole application should
4 fail. And I've already addressed that in my remarks as
5 to why that is not an appropriate approach.

6 I'm going to spend a few minutes on the
7 submission by the Manitoba Bar Association and, in a way,
8 it's unfortunate that Mr. Dawson isn't here to -- to hear
9 me say this, but I guess he can read it in the
10 transcript.

11 I, like Mr. Evans, often appreciate and --
12 and find interesting the presentations made by Mr.
13 Dawson. I have a concern with relevancy but from the
14 point of view of presentation and process it can be quite
15 entertaining.

16 I want to deal directly with his
17 suggestion that MPI failed to respond to the Board Order
18 to conduct a study of personal injury lawsuits.

19 I believe that -- and on behalf of the
20 applicant I stress, that the response brought forward by
21 the Corporation was appropriate. There's a line from an
22 old Dylan song:

23 "You don't need a weather vane to know
24 which way the wind blows".

25 You don't need a detailed cost study to

1 know that opening personal injury lawsuits to uninsured
2 motorists is not going to increase revenue for MPI.

3 Clearly, it was in evidence last year and
4 it was in argument last year, the Corporation already has
5 the right to sue extra-territorially insured motorists
6 for damages, injuries, PIPP claims that they cost within
7 Manitoba; that's where the money is.

8 It isn't with the uninsured motorist. So
9 opening up personal injury lawsuits in any of the three
10 (3) instances that were identified by the Bar Association
11 last year is just plain senseless.

12 And I think the Corporation made that
13 point in its -- in its response. And the issues -- he
14 calls them excuses, but the issues raised by the
15 Corporation are real and genuine. Who has conduct of the
16 action because that drives cost?

17 If the sole purpose of the action will be
18 recovery of PIPP benefits that would flow back to MPI,
19 why on earth would an individual want to incur the cost
20 of a personal injury lawsuit? So the question was asked,
21 who has conduct?

22 If you allow personal injury lawsuits with
23 allegations of defective vehicles and you've got a
24 situation, again, where the main beneficiary is going to
25 be the Corporation, the individual single vehicle

1 accident, crashes into a tree and is injured comes
2 forward and says, well, the brakes failed. They must be
3 defective.

4 Who has the direction? Is it in the hands
5 of -- of that claimant to be able to go forward, sue the
6 manufacturer and incur costs and probably incur costs on
7 behalf of MPI because they don't want to admit that it
8 was their negligence or their error that -- that caused
9 the accident?

10 Once you open that door you can't shut it.
11 You can't say it's only for claims that MPI agrees are
12 caused by defective vehicles. You can't say that it's
13 only for claims where MPI agrees that the uninsured
14 motorist or the extraterritorially insured motorist was
15 at fault. Once you open the door you have to allow
16 everyone to pursue the action whether they have a chance
17 of success or not.

18 And I think that the Corporation has
19 identified that in its response as being a major flaw in
20 the proposal put forward by the Manitoba Bar Association.

21 I want to quickly deal with Mr. Dawson's
22 suggestion that the Board should now order MPI to expand
23 that action against defective vehicles, expand it from
24 just personal injury to include property damage.

25 There is no bar on MPI suing an automobile

1 manufacturer for property damage caused by a defective
2 vehicle, so there's no need to lift the bar, the action
3 is already extant; it's available, it's there. There's
4 no need to -- to expand a study for something that isn't
5 banned. It's only the personal injury lawsuit that is --
6 is barred under -- under the MPI Act.

7 The other thing that I want to deal with
8 and it's the last point is Mr. Dawson's plea for a
9 claimant advisory office. And when he was
10 cross-examining Mr. Bedard running through the litany of
11 poor souls who couldn't handle their personal claim or
12 couldn't understand and -- and couldn't properly be
13 guided by the MPI case manager with respect to their
14 entitlement.

15 He talked about people who were not well
16 educated, who had difficulty with the language, who were
17 old, who perhaps had mental conditions.

18 I must admit my thought sitting here was,
19 how on earth do these poor souls manage to hold
20 employment, enroll their children in school, maintain a
21 household, and generally function as members of our
22 society?

23 I think before you would be justified in
24 ordering the sort of study that Mr. Dawson is requesting
25 there would have to be some evidence before the Board

1 that there's a need for it out there.

2 He does mention the fact that there has
3 recently been introduced by the government, not by ACAC,
4 it wasn't a decision of the Appeal Commission, but a
5 decision by the government to introduce a claimants
6 advisory office for individuals who are processing their
7 appeal in front of the Appeal Commission.

8 It's a very restricted function that the
9 claimants advisory office has and I would suggest to this
10 Board that the reason that office has a restricted
11 function is that there was no indication to the
12 government that there was any need to expand it beyond
13 that.

14 The government doesn't legislate by bits
15 and pieces, it looks at an issue and it legislates a
16 solution to that issue and clearly there's a lack of
17 evidence that has been brought before this Board that
18 would indicate there is a wholesale need for a claimants
19 advisory office.

20 I also think that it's quite obvious that
21 establishing a claimants advisory office is, number 1,
22 going to be expensive. Right now there's no provision in
23 the MPIC Act or the PIPP program for payment of expenses.
24 If you're going to open up an office like that, someone
25 is going to have to pay for it and you'll bet it won't be

1 the government, it'll be MPI.

2 And the other issue and there was evidence
3 before this Board last year, Mr. Bedard gave evidence
4 that our experience on the internal review files is that
5 when lawyers and outside advocates are involved there's
6 considerable delay in processing the claim and that's an
7 issue that I think would have to be addressed.

8 So in the absence of a proven need I think
9 there's no doubt and -- and Mr. Dawson was very upfront,
10 he said this was a perception. This was a perceptible
11 argument. A straw man, if you will, that he was putting
12 up.

13 But before the Corporation spends and uses
14 its resources to address an issue like that, I think it's
15 fair to say there has to be a demonstrated need and there
16 has been none given to the Board -- provided to the
17 Board.

18 That concludes my comments. I don't want
19 to recap. I think I've made it clear and I'm not
20 suggesting that I'm in any way restricted by time, but I
21 recognize the fact we have been here a while.

22 It's on the record. The applicant's
23 position is on the record. It usually comes to me as
24 counsel to also give an indication to the Board as to
25 when a ruling is required by the Corporation; that hasn't

1 changed.

2 The beginning of December, obviously
3 earlier if possible. But the beginning of December is
4 the, sort of, drop dead date as far as the Corporation is
5 concerned for getting the changes processed and getting
6 them out in the renewals that start going out in the
7 middle of January.

8 As with the other counsel and Intervenors,
9 I want to thank the Board for its attention and for the
10 consideration that it's given to this application. Thank
11 you.

12 THE CHAIRPERSON: Thank you very much,
13 Mr. McCulloch. So, we have come to the end of the public
14 aspect of the GRA for this year. The Board has received
15 evidence and comments from the parties present and we'll
16 now retire to consider our findings.

17 The Board Order can be expected no later
18 than presumably about this time next month, so we should
19 be well in advance of the time you were speaking, Mr.
20 McCulloch.

21 We appreciate the efforts of all of those
22 connected to the hearing, particularly those from MPI
23 that provide the application to which the others respond.

24 We want to thank MPI's team, those that
25 stand behind them, as well as those that are back in

1 their offices supporting the venture.

2 As well, we want to thank the Intervenors,
3 their counsels and advisers, the presenters that appeared
4 before us, the Board advisors and our staff. All were
5 very helpful to the proceedings.

6 These hearings provide a transparency,
7 explanation, discussions that speak to reviewing and, on
8 occasion perhaps, improving the insurance program we rely
9 upon.

10 MPI and its programs are clearly of
11 importance as acknowledged by the fact of the Intervenors
12 present and the other interest that's always shown and
13 displayed at these hearings.

14 In closing, then, I note that our
15 transcripts are now on our website and our thanks for
16 this major improvement goes to Digi-Tran and Ms.
17 Wilkinson. We greatly appreciate that. It should
18 simplify our order writing process, I believe.

19 So our Order will flow in due course and
20 this concludes the public hearing. Thank you to
21 everyone.

22

23 --- Upon adjourning at 5:35 p.m.
