
2019/20 CENTRA GAS GENERAL RATE APPLICATION**Centra Gas #11**

Centra to provide the Board, on a CSI basis, the proportions of the total gas that Centra manages for sale service compared to the T-Service load, firstly for the summer and secondly for the winter.

Response:

Sales Service represents the majority of the Manitoba customer load in both summer (April-October) and winter (November-March). In summer, Sales Service volumes are a small majority of the Manitoba customer load relative to T-Service volumes, due largely to the volumes nominated by the Special Contract customer class. In winter, Sales Service volumes are a larger majority of the Manitoba customer load relative to T-Service volumes.

The requested CSI information is available on page 34 of 56 of the 2018 Load Forecast, found at Appendix 7.6 of Centra's 2019/20 General Rate Application. Forecast T-Service volumes can be found in the last line of the page ("TOTAL-T"). Sales Service volumes can be found by subtracting T-Service volumes from the "TOTAL" line in the first section of the page.
