2023 GENERAL RATE APPLICATION
Undertaking #29 Transcript Page 1593**Undertaking #29**

For MPI to provide a breakdown of the 84 percent of fatalities broken down by the four (4) factors.

RESPONSE:

The above references that 84 percent of fatalities in 2021 occurred outside of the City of Winnipeg. The below table shows the break down of those fatalities by the four major contributing factors to serious collisions in Manitoba (i.e., impairment, distraction, non-seatbelt use and speed). Note that the contributing factors are not mutually exclusive (e.g., a single fatality may have both impairment and speed as contributing factors).

<u>Contributing Factor</u>	<u>Percentage of the Total Fatal Victims Outside of Winnipeg in 2021</u>
Impairment	30%
Distraction	29%
Non-Use of Seatbelt	24%
Speed	16%
