MANITOBA PUBLIC UTILITIES BOARD

Re: MANITOBA PUBLIC INSURANCE
 2008 GENERAL RATE APPLICATION

Before Board Panel:

- Graham Lane - Board Chairman
- Alain Molgat - Board Member
- Len Evans - Board Member

HELD AT:

Public Utilities Board
400, 330 Portage Avenue
Winnipeg, Manitoba
October 16th, 2007

1 --- Upon commencing at 9:10 a.m.

2

3 THE CHAIRPERSON: Okay, good morning,
4 everyone and welcome to closing statements or argument as
5 you would have it. Though I'm sure we've all enjoyed
6 each other's company, I'm sure also this is a day we've
7 all looked forward to.

8 First of all, I believe Mr. McCulloch has
9 some undertakings to respond to.

10 MR. KEVIN MCCULLOCH: Yes, Mr. Chairman,
11 thank you. At the end of proceedings on October 10th
12 there were five (5) undertakings left to be responded to.
13 Those were sent over electronically last Friday.

14 But for the record I would like to enter
15 these five (5) undertakings as exhibits. The first one,
16 Undertaking Number 11 by my count is MPI Exhibit Number
17 23.

18

19 --- EXHIBIT NO. MPI-23: Response to Undertaking 11

20

21 MR. KEVIN MCCULLOCH: Undertaking Number
22 17, MPI Exhibit Number 24.

23

24 --- EXHIBIT NO. MPI-24: Response to Undertaking 17

25

1 MR. KEVIN MCCULLOCH: Undertaking Number
2 23, MPI Exhibit Number 25.

4 --- EXHIBIT NO. MPI-25: Response to Undertaking 23

5

6 MR. KEVIN MCCULLOCH: Undertaking Number
7 24, MPI Exhibit 26.

8

9 --- EXHIBIT NO. MPI-26: Response to Undertaking 24

10

11 MR. KEVIN MCCULLOCH: And Undertaking
12 Number 27, MPI Exhibit Number 27.

13

14 --- EXHIBIT NO. MPI-27: Response to Undertaking 27

15

16 MR. KEVIN MCCULLOCH: So those are the
17 five (5) exhibits to be filed and complete the
18 undertakings of the panel. Thank you.

19 THE CHAIRPERSON: Thank you, Mr.
20 McCulloch.

21

22 (BRIEF PAUSE)

23

24 THE CHAIRPERSON: Okay. I believe the
25 order was understood between all of the parties so we'll

1 get right into it. Ms. Everard, do you want to begin for
2 the Board?

3

4 CLOSING COMMENTS BY MS. CANDACE EVERARD:

5 MS. CANDACE EVERARD: Thank you, Mr.
6 Chairman, members of the Board, ladies and gentlemen. We
7 have now completed the evidentiary component of the
8 public hearing with respect to MPI's application to the
9 Public Utilities Board for approval of its base rates and
10 premiums charged for compulsory vehicle and driver
11 insurance; that is, rates for service for the 2008/2009
12 insurance year which would take effect on March 1st,
13 2008.

14 As well, the Corporation has proposed a
15 premium rebate of 7.75 percent of net Basic premiums for
16 2006/2007 of approximately \$49 million. In addition, the
17 Corporation has applied for approval of a process
18 pursuant to which rates for the 2009/2010 and 2010/2011
19 insurance years would be approved without the traditional
20 application filing and public hearing.

21 As Board counsel, Mr. Saranchuk and I take
22 no position on the merits of any part of the Application
23 by the Corporation or any of the positions taken by the
24 other parties. Our role is to summarize the matters that
25 this Board may wish to consider in the proceeding.

1 With respect to 2008/2009, the Corporation
2 is seeking approval of rates which are based on an
3 overall zero percent change for all premiums. Experience
4 based rate adjustments are applied for ranging from minus
5 15 percent to plus 15 percent for individual classes,
6 with the exception of mopeds and motor scooters,
7 trailers, and off road vehicles.

8 For all vehicles other than motorcycles,
9 trailers, and off road vehicles, classification offset
10 adjustments are applied, ranging from minus 6.89 percent
11 to plus 17.24 percent to achieve revenue neutrality from
12 rate group adjustments.

13 Capping of all rate changes at 20 percent
14 has been applied. Driver licence premiums are to remain
15 unchanged at forty five dollars (\$45). Similarly, there
16 is no change proposed in service and transaction fees, or
17 permit and certificate fees.

18 With respect to the financial results of
19 the Corporation, the updated financial picture for
20 2006/2007, and 2007/2008, which were the subject of prior
21 year rate applications, are as follows:

22 With respect to fiscal 2007, and this is
23 reflected in TI-11, which is at Tab 4 of the Board's book
24 of documents, for that particular year, Basic recorded a
25 net income of 61.7 million, including a transfer of 13.9

1 million from the Immobilizer Incentive Fund, or IIF,
2 compared to a forecasted net income of 34.7 million last
3 year, which included a \$10.7 million transfer from the
4 IIF, an improvement of \$27 million.

5 The change was attributed primarily to an
6 improvement in forecasted net claims incurred of 22.6
7 million that was attributable to actuarial adjustments
8 related to 2004/2005 and 2005/2006. As well, there was
9 an improvement in forecast -- forecasted total expenses
10 of \$5.6 million, including a reduction in regulatory
11 costs of 1.2 million.

12 With respect to the 2007/2008 fiscal year,
13 the current year, the information is set out at TI-12,
14 which is at Tab 5 of the book of documents, the
15 Corporation is currently forecasting to have a net income
16 of \$31.4 million for rating purposes, including a \$12.6
17 million transfer from the IIF, compared to a projected
18 net income of \$4.6 million, including an \$11.1 million
19 transfer from the IIF, or a \$6.5 million loss before the
20 transfer, forecasted in the GRA last year.

21 The improved experience is despite an
22 increase in total claims costs of \$10.2 million compared
23 to last year's projection. This approximately 1.5
24 percent increase is due to the combined effects of higher
25 than forecasted net claims incurred of \$7 million, and

1 higher costs associated with the Immobilizer Incentive
2 Program of \$2.4 million.

3 All of this was offset by an increase in
4 investment income from that forecasted last year of \$38
5 million.

6 With respect to the fiscal year ending
7 February 2009, the projected operating results are
8 reflected at TI-14 through TI-16, which are found at Tab
9 7 through 9 of the Board's book of documents.

10 Net income of half a million dollars is
11 projected for fiscal 2009 after a transfer from the IIF
12 of \$12.6 million; in other words, a loss of \$12.1 million
13 before the transfer.

14 Total earned revenues are currently
15 projected to be \$704 million dollars compared to 681.7
16 million court -- currently forecasted for the current
17 year, an increase of 22.3 million.

18 This year's application assumes a 2.75
19 percent vehicle upgrade factor for 2008/2009. This
20 reflects the renewal of the veh -- vehicle through
21 customer disposal of older vehicles and the purchase of
22 newer ones.

23 As well, this year's application assumes a
24 volume factor, or a growth in the number of vehicles
25 insured of 2 percent for 2008/2009.

1 Service fees are expected to be 17.6
2 million for 2008/2009, which is an increase from the
3 seventeen (17) -- from the amount forecasted in
4 2007/2008.

5 Total claims costs for 2008/2009,
6 including net claims incurred, claims expenses, and road
7 safety loss prevention expenses, are expected to increase
8 to 711.4 million, compared to 684.1 million total claims
9 costs forecasted for the current year, or an increase of
10 27.3 million.

11 Other expenses are projected to be 104.8
12 million, an increase of 4.2 million over that projected
13 for the current year, with operating expenses to increase
14 by approximately \$1 million dollars over the current
15 year.

16 The projected underwriting loss for
17 2008/2009 is \$112.2 million while investment income is
18 forecasted to be \$100.2 million. The result is that,
19 overall, the Basic Insurance Program is expected to have
20 a net loss of \$12 million before a \$12.6 million transfer
21 from the IIF. Net income for rating purposes is
22 projected to be five hundred and fifty one thousand
23 dollars (\$551,000) after that transfer.

24 With respect to premiums in the
25 Application at hand for 2008/2009, the average rate

1 adjustment for each major class is as follows:

2 For private passenger, a decrease of 0.1
3 percent.

4 For the Commercial class, a decrease of
5 1.2 percent.

6 For the Public class, an increase of 1.2
7 percent.

8 For the Motorcycle class, an increase of
9 9.2 percent.

10 For trailers, a decrease of 4.7 percent.

11 For off-road vehicles, there is no change
12 requested and, overall, there is no change requested in
13 rates.

14 After consideration of insurance use and
15 territory and capping and balancing for experience rate
16 adjustments, the results are modelled to assess the
17 impact of various rate and classification changes which
18 yield the requested rate changes as follows:

19 Forty percent of vehicles will receive a
20 rate decrease; most decreases are less than fifty dollars
21 (\$50). Eight percent of vehicles will receive no change
22 in rates. Forty-six percent of vehicles will receive a
23 rate increase, including 19 percent of vehicles which
24 will receive a rate increase of up to twenty dollars
25 (\$20). Twenty-four percent of vehicles which will

1 receive an increase of between twenty (20) and fifty
2 dollars (\$50); 1.8 percent of vehicles which will receive
3 a rate increase of between fifty (50) and a hundred
4 dollars (\$100); and point seven (.7) of vehicles which
5 will receive an increase of greater than a hundred
6 dollars (\$100).

7 As I indicated a moment ago, this year the
8 Corporation is seeking approval of a multi-year rate
9 application where the rates for the 2009/'10 and 2010/'11
10 fiscal years would be based on a set process yet to be
11 fully determined. The Corporation advises that its
12 forecasting and rating practices have reached a maturity
13 level and financial stability whereby multi-year rate
14 applications may be more appropriate.

15 The primary reasons that the Corporation
16 has cited with respect to its multi-year rate application
17 are financial strength, rate stability, consistency in
18 rate-setting methodology, legislative intent, substantial
19 -- the substantial change clause, human resources, costs,
20 the rate stabilization reserve surplus, and other
21 utility's multi-year applications such as Manitoba Hydro.

22 The Corporation projects, pursuant to its
23 proposal, that regulatory cost savings would average six
24 hundred and eighty-nine thousand dollars (\$689,000)
25 annually, excluding costs that may be incurred by the

1 Board in its review of the Corporation's filings. In
2 addition, the estimated human resource cost savings to
3 the Corporation is two point five (2.5) full-time
4 equivalents; that being the staff time to prepare for and
5 attend at the GRA Hearing. This estimated savings does
6 not include the staff time that would be required to be
7 spent to respond to any questions from the Board or
8 Intervenors through the Board, with respect to the
9 annotated application filed.

10 The Corporation has proposed that the
11 following rules be utilized in the multi-year process for
12 2009/'10 and 2010/'11 with respect to the overall rate
13 requirement.

14 Firstly, if the overall actuarial
15 indicator is between negative 1 and positive 1 percent,
16 the Corporation will seek no change in overall revenue.
17 If the overall actuarial indicator is between a negative
18 3 and a negative 1 percent or between a positive 1 and
19 positive 3 percent, the Corporation will modify the rates
20 applied for in the multi-year process by the full amount
21 of the actuarial indicator.

22 Thirdly, if the overall actuarial
23 indicator is less than a negative 3 percent or greater
24 than a positive 3 percent, the Corporation will request a
25 hearing. Even without a revenue requirement change there

1 is the potential for rate increases for major classes in
2 the Order of up to 15 percent as acknowledged by the
3 Corporation.

4 With respect to the determination of
5 rebates, in the event that the Rate Stabilization Reserve
6 or RSR is in excess of the PUB target by more than 5
7 percent of gross written premium, the total excess of the
8 RSR will be rebated to customers.

9 The filing to be submitted by the
10 Corporation would consist of many of the documents
11 typically provided. A listing of the specific documents
12 to be provided is set out in the response to PUB/MPI
13 Question 34, asked in the second round, which is found at
14 Tab 31 of the Board's book of documents.

15 In addition, the Corporation has indicated
16 that it would file additional information if same were
17 requested by the Board. In terms of timing, the
18 Corporation would file its application with the Board on
19 or before July 1st and would seek Board's -- the Board's
20 approval of rates on or before December 1st.

21 The process proposed by the Corporation
22 includes no public hearing for the two (2) years in
23 question and the limited involvement of public interest
24 groups, though the Corporation has stated that the
25 process will be developed with input from the Board and

1 the Intervenors.

2 During the course of the hearing this
3 year, reference was made to a number of issues which the
4 Board has raised in past orders which remain outstanding.
5 These include the driver safety rating project, PIPP,
6 bench-marking and the business process review.

7 As well, a number of Board recommendations
8 from past orders have not been acted upon. These include
9 recommendations relating to Extension in SRE, investment
10 practices and the inter-provincial trucking subsidy.

11 With respect to DVL or the Driver and
12 Vehicle Licensing Department, it is the state of affairs
13 that same as being treated as a fourth line of business
14 in the Corporation after the merger two (2) years ago.
15 The funding for DVL is fixed and smaller than the cost
16 requirements to operate it such that there is a shortfall
17 to the Extension line of business. For 2006/2007, the
18 cost of the operations of DVL were \$31.4 million while
19 funding was established at 20 1/2 million resulting in a
20 shortfall of approximately \$10.9 million, an increase
21 from the \$6.1 million shortfall in the previous year,
22 2005/2006.

23 The Corporation has undertaken a business
24 process review to identify ways in which it can maximize
25 benefits to ratepayers, vehicle registrants and driver

1 licence holders arising from the DVL merger. Spending
2 for the Business Process Review or PBR is approximately
3 \$39.9 million, up from a \$28.8 million forecast last
4 year. The majority of these costs, save those incurred
5 for the driver safety rating and the PIPP infrastructure
6 enhancement, are borne by the Extension line of business.

7 The Corporation is currently undertaking a
8 process to implement a new system to replace the current
9 Bonus/Malus system. At last year's GRA hearing, the
10 Corporation anticipated that there would be a special
11 hearing before the Board in May 2007 to target -- or to
12 begin to target the implementation of the new system by
13 August 2008 with completion by July 2009.

14 Since then, the Corporation has slowed the
15 timeline on the Driver Safety Rating Project until such
16 time as it fully understands the opinions and feelings of
17 Manitobans regarding the rewarding of good drivers and
18 the surcharging of high risk drivers.

19 The completion of the Driver Safety Rating
20 project is now forecasted to be August of 2010. The cost
21 of the project is estimated to be \$12.8 million including
22 a \$2.5 million contingency which is an increase from the
23 \$9.1 million estimate of last year which also included a
24 contingency though of 1.7 million.

25 With respect to anti-theft initiatives,

1 I'll speak first briefly about the WATSS or Winnipeg Auto
2 Theft Suppression Strategy. This Strategy was started by
3 the Provincial Auto Theft Task Force, a partnership
4 between the Corporation, the Winnipeg Police Service and
5 Manitoba Justice to monitor youth offenders convicted of
6 auto theft and their compliance with court imposed
7 conditions. It was intended as a bridging or short term
8 strategy to dampen auto theft until the number of
9 vehicles protected with immobilizers reached critical
10 mass.

11 Originally a two (2) year funding
12 commitment was made of eight hundred and ninety-six
13 thousand dollars (\$896,000) per year. This has been
14 extended by one (1) year to expire in June of 2008. The
15 annual funding paid by the Corporation directly supports
16 the cost of fourteen (14) additional positions within
17 Manitoba Justice.

18 The Corporation also contributed a one (1)
19 time cost of sixty thousand dollars (\$60,000) earmarked
20 for the development of an information sharing process
21 between the various stakeholders. The Corporation has
22 indicated that going forward it will re-evaluate whether
23 to further extend the funding of this program.

24 This year there has been a continuation of
25 the Immobilizer Incentive Plan. A program to install

1 immobilizers in vehicles prone to theft known as the
2 most-at-risk or MAR vehicles.

3 The MAR list, now known as the Enhanced
4 list, incorporates vehicles with a one (1) in sixty (60)
5 chance of auto theft which are required to install an
6 immobilizer, and the list has been expanded to include
7 vehicles with a one (1) in one hundred (100) chance of
8 being stolen which vehicles can choose to install an
9 immobilizer. This latter group is called the voluntary
10 group.

11 All of the vehicles on the MAR list are
12 eligible for a free immobilizer from the Corporation.
13 The Corporation has indicated that the enhanced list may
14 be amended with experience.

15 As of September 1st, 2006, MAR vehicles
16 that are brought into Manitoba must be immobilized prior
17 to registration. Similarly, MAR vehicles stolen after
18 September 1st, 2006, must be immobilized before they can
19 be put back on the road.

20 New Manitoba legislation, which took
21 effect on September 1st, 2007, implemented a mandatory
22 immobilizer program pursuant to which all MAR vehicles
23 with odds of theft in one (1) -- of one (1) in sixty (60)
24 or greater, located in or commuting to Winnipeg, must
25 obtain an immobilizer as a condition of the renewal of

1 their auto insurance. This represents approximately
2 forty-six thousand (46,000) vehicles on the MAR list.

3 The Immobilizer Program was funded by the
4 Immobilizer Incentive Fund, or the IIF, with an
5 allocation of \$50 million from the Basic RSR, and has
6 offset the cost of installations and the administration
7 of the Immobilizer Program. It is anticipated that this
8 fund will be fully depleted in 2009/'10. The program
9 envisions forty thousand (40,000) installations during
10 each year through 2011/'12.

11 As of the end of 2006/2007, the
12 Corporation has reported forty thousand two hundred and
13 twenty (40,220) immobilized vehicles, and is forecasting
14 that total to grow to seventy-one thousand four hundred
15 and ninety-nine (71,499) vehicles by the end of the
16 current year, 2007/2008. Overall, the forecast is to
17 install two hundred and fifty thousand, seven hundred and
18 twenty-one (250,721) immobilizers.

19 For the year of the Application,
20 2008/2009, the Corporation forecasts a reduction in
21 claims incurred from auto theft of \$13.7 million to
22 Basic, and \$1.3 million to Extension. However, no
23 allocation of the costs associated with the program were
24 allocated to Extension. The Corporation has taken the
25 position that prior transfers from Extension to the Basic

1 RSR met this requirement.

2 The total impact on the operating results
3 from the program for the year of the Application,
4 2008/2009, is projected at a negative 4.6 million. The
5 program is anticipated to be self-supporting, and will
6 result in positive net income in 2010/'11, whereby the
7 cost of the immobilizer installations in that year will
8 be offset by forecasted claims costs reductions.

9 Over the life of the program, the
10 Corporation has estimated claims incurred savings from
11 reduced auto theft totalling \$178.5 million to Basic, and
12 \$24 million of cost reduction to Extension, for the
13 period 2005/2006 through 2013/'14.

14 With respect to investment income, which
15 is a major component of the Corporation's income, same
16 has historically offset annual underwriting losses.

17 The Corporation is projecting
18 approximately \$100.2 million in investment income to the
19 Basic Insurance Division for 2008/2009. The size of the
20 corporate portfolio for 2008/2009 is projected to be \$2.2
21 billion, comprised of roughly 73 percent long term bonds,
22 24 percent in equities, 2.7 percent in cash and short
23 term investments, and .4 of a percent in venture capital.

24 The yields on the portfolio range from
25 4.33 percent on short term investments to 4.89 percent on

1 long term investments, and including -- and, pardon me,
2 6.4 percent on equities for the year of the Application,
3 including an equity risk premium of 1.5 percent as
4 directed by the Board in its Order 156/06.

5 The Department of Finance of the Province
6 of Manitoba has authority over the Corporation's
7 investments, though there is a joint investment committee
8 in which the Corporation participates.

9 Historically, there has been some
10 significant variability in the Corporation's projected
11 versus its actual investment income results, which could
12 be attributable to equity gains and losses taken versus
13 those projected in each year.

14 Apparently, some securities were
15 subsequent -- some securities sold were subsequently
16 repurchased. The investment policy statement of the
17 Corporation includes a guideline for realizing gains
18 based on the level of unrealized gains relative to the
19 book value of investments.

20 At present, the Corporation reports
21 holding unrealized security gains of approximately \$11
22 million, down from over \$93 million at the last year end.

23 The Corporation has adopted in the current
24 year, 2007/2008, changes in accounting standards related
25 to the Canadian Institute of Chartered Accountants.

1 Specifically these are Sections 15-30 relating to
2 comprehensive income, 30-51 relating to Equity, 38-55
3 relating to financial instruments and the recognition and
4 measurement thereof, and Section 38-65, relating to
5 hedges.

6 These new sections will require the
7 Corporation to recognize unrealized gains in a new
8 financial statement, the Statement of Comprehensive
9 Income. The accumulated other comprehensive income is to
10 be disclosed as a separate item within the Corporation's
11 retained earnings. The Corporation has stated that it
12 should not be regulated based on its comprehensive
13 income.

14 Moving to the Rate Stabilization Reserve
15 or the RSR, the stated purpose of the RSR is to protect
16 motorists from rate increases made necessary by
17 unexpected events and losses arising from nonrecurring
18 events or factors like the hailstorm experience that
19 swept through the province this summer.

20 The application as filed projects the
21 balance of the Basic RSR in the millions of dollars as
22 follows:

23 For 2005/2006, 173.1 million including
24 consideration of the 37 million in the IIF and 19 million
25 from the SRE in Extension transfers.

1 For 2006/2007, 161.3 million including
2 consideration of the IIF with a discontinuance of
3 transfers from SRE and Extension.

4 For 2007/2008, 131 million after a
5 proposed \$49.1 million dollar rebate and including the
6 IIF.

7 For 2008/2009, 118.9 million including a
8 consideration of the IIF.

9 For 2009/2010, 114.6 million, by which
10 time the IIF is expected to be fully depleted.

11 For 2010/'11, 118.4 million.

12 And for 2011/2012, 122.8 million.

13 The Board's RSR target level for
14 2007/2008, the current year, is a range of 69 million to
15 105 million. At last year's application, the Corporation
16 indicated a preference to use the minimum capital test or
17 MCT to establish the RSR range.

18 The MCT is a solvency test utilized by
19 private insurance companies which are regulated by the
20 Office of the Superintendent of Financial Institutions or
21 OSFI. The Corporation has indicated that the test is an
22 industry best practice but acknowledged that it is not
23 subject to OSFI regulation.

24 The Board concluded in Order 156/06 that
25 while the MCT is a reasonable test of a private insurer's

1 financial strength and may prove as a useful trend
2 indicator over time, it is not to supplant the approach
3 adopted by the Board for the Corporation.

4 Overall, the financial strength of the
5 Corporation is strong, particularly given retained
6 earnings of 46.4 million and 64.6 million in Extension
7 and SRE, respectively, as at the end of 2006/2007. The
8 Corporation has declined to file any forecasts of
9 retained earnings relating to SRE and Extension. As of
10 March 1st, 2006 the Corporation's Board authorized no
11 more transfers of retained earnings from Extension and
12 SRE to Basic to be made, as the PUB RSR target had been
13 met.

14 It is noted that the Corporation's annual
15 report indicated that the Board of Directors approved a
16 one (1) time transfer of \$39 million in deemed excess
17 competitive line retained earnings on March 1st, 2007 to
18 develop an Extension Development Fund or EDF.

19 The EDF is apparently to be used to defray
20 the annual driver licensing project costs that flow
21 through the Extension line of business. No details were
22 provided to the Board.

23 The competitive lines of business have
24 approximately \$110 million in retained earnings before
25 the transfer to the EDF, and combined with the 161.3

1 million in Basic retained earnings overall there was over
2 \$272.3 million in retained earnings at the end of
3 2006/'07.

4 For the current year 2007/'08, it is
5 projected that the Basic insurance RSR will reach 180.1
6 million including the IIF; well in excess of the top end
7 of the Board's RSR range for rate setting purposes. This
8 amount does not include SRE and Extension retained
9 earnings, nor the proposed RSR rebate proposed by the
10 Corporation.

11 As previously indicated, that proposal is
12 a \$49.1 million rebate to be paid in 2008/2009
13 representing 7.75 percent of gross written motor vehicle
14 premiums.

15 With respect to claims incurred, claims
16 experienced rate adjustments are made by looking at
17 historical data and projecting same into the future to
18 determine the expected cost of claims for all of the
19 different categories in Order to achieve revenue
20 neutrality.

21 With respect to accident benefits, the
22 actual claims incurred were 1. -- pardon me, 186.1
23 million in 2006/2007. They are forecasted to be 234
24 million in the current year, 2007/2008, and are projected
25 to increase to 243.7 million in 2008/2009.

1 With respect to collision coverage, the
2 actual claims incurred in 2006/2007 was 234.4 million,
3 forecast to increase to 238.9 million in the current year
4 and projected to increase to 253 million in 2008/2009.

5 With respect to comprehensive coverage,
6 the actual claims incurred in 2006/'07 was 75.4 million,
7 forecasted to decrease in the current year to 75.3
8 million, forecasted to increase to 76 million in
9 2008/2009.

10 With respect to property damage, the
11 actual claims incurred in 2006/2007 were \$34.6 million
12 projected -- or pardon me, forecast to stay the same in
13 2007/2008 and projected to increase to 36.8 million in
14 2008/2009.

15 Public liability claims incurred were 4.3
16 million in 2006/2007, projected to increase to 6.2
17 million in 2007/2008 and to 6.4 million in 2008/2009.
18 The total numbers for claims incurred therefore, for
19 2006/2007 were 534.9 million, forecasted to increase to
20 589.5 million in 2007/2008 and projected to increase to
21 615.9 million in 2008/2009.

22 In other words, claims incurred are
23 projected to increase by 81 million or 15.1 percent over
24 the next two (2) years. The majority of the increase
25 relates to a projected increase in PIPP claims incurred

1 by 57.5 million or 31 percent over the next two (2)
2 years.

3 In past orders, the Board recommended that
4 the Corporation develop claims handling, PIPP and other
5 operating cost benchmarks and perform analyses comparing
6 the Corporation's experience with that of other
7 comparable insurers.

8 The Corporation began a PIPP
9 infrastructure planning study in December 2005 at an
10 estimated cost of just over \$1.2 million. The
11 Corporation indicated at the last GRA that the three (3)
12 phase planning study would be completed by August 2006,
13 at which time implementation decisions would be made.

14 In an update provided at this Application,
15 the Corporation has stated that the need to make changes
16 to the tools, training and support systems available to
17 PIPP case managers is not urgent but is important in the
18 long term.

19 The Corporation is proceeding slowly with
20 this initiative with more focus on more pressing issues
21 such as auto theft.

22 Phase 1 of the PIPP infrastructure
23 initiative, the Insight Phase, has an objective of
24 ensuring that any future investment in PIPP processes,
25 systems and people are aligned with the vision and

1 strategy for PIPP which has been completed while Phase 2
2 is currently in progress.

3 Phase 2 represents detailed planning of
4 the initiative and the selection of a bodily injury claim
5 system.

6 Phase 3, as described in the last
7 application, represents the road map phase; the objective
8 of which is to develop business cases for the prioritized
9 PIPP improvement opportunities. One of the improvement
10 opportunities includes a PIPP performance management and
11 benchmarking framework.

12 The Corporation now expects the
13 implementation of Phase 3 recommendations to start in the
14 first quarter of the fiscal year 2008/2009 and is
15 expected to take up to five (5) years to implement. The
16 Corporation indicated that work would be completed by
17 2012/2013.

18 With respect to operating expenses, the
19 operating expenses attributable to Basic have increased
20 to 43.7 million in the current year from 38.6 million
21 last year, and are projected to increase further to 44.7
22 million in the year of the Application, 2008/2009.

23 Staffing levels have continued to increase
24 for the Basic line of business as set out at Tab 37 of
25 the Board's book of documents.

1 The level increased from thirteen hundred
2 and thirty one point four (1,331.4) full time equivalents
3 as of March 1st, 2003, to fifteen hundred thirteen point
4 five (1,513.5) full time equivalents as of March 1st,
5 2007. The level is forecasted to grow to one thousand
6 five hundred and forty-seven point one (1,547.1) full
7 time equivalents as at March 1st, 2009. Over the past
8 number of years support staff have increased by
9 approximately 65 percent.

10 The Corporation has indicated that only
11 employees allocated 100 percent to DVL operations were
12 removed from the table at Tab 37 of the book of
13 documents. DVL employees are -- have been integrated
14 throughout the Corporation, and the head count at that
15 tab includes employees whose time is allocated among the
16 various lines of business of the Corporation.

17 As referenced earlier, the Corporation is
18 currently undertaking a business process review of the
19 DVL operations.

20 With respect to the allocation of costs,
21 the Corporation has indicated that it is allocating the
22 correct cost to DVL. With DVL located in Extension,
23 contrary to the Board's recommendation, no details have
24 been provided.

25 Salaries are a major component of the

1 operating expenses of the Corporation, representing 58
2 percent of the total operating and claims expenses in the
3 year of the Application, 2008/2009.

4 The need for a new shared service cost
5 allocation review was an issue raised by the Board in its
6 Order 156/06.

7 With respect to interprovincial trucking,
8 there is, at present, a rate subsidization being borne by
9 the Corporation's Basic ratepayers in favour of
10 interprovincial truckers, with respect to injury claims
11 costs of approximately \$1.8 million per year for the last
12 five (5) years.

13 A couple of comments, then, on sustainable
14 development before I conclude my remarks.

15 The Corporation has filed this year a pay-
16 as-you-drive, or PAYD Research Study, on paid programs in
17 North America. The information indicates that in
18 jurisdictions where pilot PAYD programs have been
19 implemented, some have appealed to segments of the
20 driving public.

21 The Corporation has indicated a
22 willingness to review the results of the study, and has
23 not precluded the possibility of a pilot program in the
24 future.

25 In conclusion, Mr. Chairman and members of

1 the Board, these are some of the issues that have arisen
2 from this year's Hearing. Mr. Saranchuk and I would like
3 to thank the Board, the Intervenors, and the MPI panel
4 and its counsel, for the indulgence and cooperation
5 extended during the course of this Hearing. Thank you.

6 THE CHAIRPERSON: Thank you, Ms. Everard.
7 So now we'll move on to CMMG. Mr. Oakes,
8 are you ready to being?

9

10 CLOSING COMMENTS BY CMMG:

11 MR. RAYMOND OAKES: Thank you, Mr.
12 Chairman. and my thanks again to Mr. Williams with
13 respect to the courtesy in allowing those Intervenors
14 with slightly shorter presentations and final arguments
15 to proceed.

16 Mr. Chairman, members of the Board, in
17 seeking to sum up this year's MPI application in a few
18 words, I recall the solicitor who used to be with our
19 firm that subsequently left to join MPI's burgeoning
20 legal department, and his letters to opposing counsel
21 often contained the description that he was shocked and
22 dismayed. That was his trademark phrase.

23 I'm not sure that personally I'm shocked
24 and dismayed, although some of the motorcyclists who
25 receive the -- the 9.4 percent increases or, which may

1 range, of course, up into the double digits, certainly
2 they may be shocked and dismayed. I would think mildly
3 surprised and more than mildly disappointed would be my
4 characterization.

5 Of course, ongoing escalation of
6 motorcycle rates don't characterize -- don't compromise
7 (sic) a surprise any more; certainly a disappointment
8 though. The notion of the multi-year rate application
9 was certainly a surprise.

10 Motorcycle rates continue to rise. The
11 average increase over the last ten (10) years has been
12 substantial, rising from three hundred and ninety seven
13 dollars (\$397) to one thousand eighteen (1,018) on
14 average, or increasing by about 2 1/2 times. There was
15 some rate softening last year, but of course, the
16 increase sought by the Corporation this year is still
17 amounting to what we would consider rate shock.

18 Motorcycle rates continue to be less and
19 less affordable for this important community. In
20 addition to the raw increases, the further evidence
21 supporting the rate problem for motorcycles. We also saw
22 the relatively higher uptake for time payment plans for
23 this group, as described in the responses to CMMG/MPI-1-
24 12.1 and CMMG-1.12.2. The usage rate of the time payment
25 plans is much higher for motorcyclists than private

1 passenger vehicle owners; quite simply, the higher rates
2 force them to finance their insurance.

3 There are a number of issues related to
4 MPI's cost structure and the analysis of motorcycle rates
5 which I'll discuss during this argument. CMMG's
6 position, based on its review of these matters, is that
7 the overall rate increase for motorcycles should be
8 capped at the current level.

9 With respect to those claims and operating
10 costs, we looked at the comparable insurers such as SGI
11 and ICBC. Claims expenses have grown by more than double
12 the amount in Manitoba as in Saskatchewan. In the same
13 period claims expenses actually decreased in BC as shown
14 in CMMG/MPI-25.1.

15 Operating expenses grew by 73 percent in
16 Manitoba compared to 15 percent in Saskatchewan and a
17 substantial decrease in BC. The total staff, excluding
18 the amalgamated driver and vehicle licensing operations,
19 grew by two hundred and fourteen (214) from one thousand
20 three hundred and thirty-one point four (1,331.4) in 2003
21 to fifteen hundred and forty-five (1,545) total staff
22 projected for 2008 as demonstrated in CMMG-1-28.1.

23 Mr. Galenzoski, of course, describes the
24 use of indexes as a measure, and the transcript relates
25 that at page 1308. Even though this is, perhaps, his

1 swan-song year, and I have the greatest respect for his
2 analysis, I think that it's in the Corporation's best
3 interest to have its witnesses talk about an explanation
4 of those indexes. Even though we're really talking about
5 trend analysis and the comparison of trends and the
6 containment of increases, one needs to look no further
7 than the use of the CPI to see that these are trend
8 analysis and comparison of trends.

9 If there were greater control over
10 expenses, Mr. Chairman, then rates for all Manitobans
11 would be lower.

12 Loss development and IBNR are inextricably
13 tied to the rate level indication as described in the
14 transcript at pages 977 and 978. The higher the loss
15 development factors used in the IBNR report, the higher
16 the rate.

17 During this Hearing, the CMMG was quite
18 surprised at the degree in change to loss development for
19 PIPP coverage. At the individual coverage level, there's
20 a remarkably pattern -- a remarkable pattern of
21 inconsistency.

22 At the overall level, what is clearly
23 evident is the decline in total PIPP costs from 2001 as
24 described at page 985 of the transcript. If the
25 Corporation is consistently overestimating claims costs,

1 the rates related to these costs are overestimated as
2 well. This, in part, explains the ongoing rebates that
3 have occurred. Rates have been too high and quite likely
4 will be too high in the future.

5 With respect to ongoing rate escalations
6 specific to motorcycles, the driver appears to be the --
7 or the causation appears to be the sporadic occurrence of
8 large bodily injury losses. In this cross-examination,
9 several aspects of the large loss phenomenon were probed
10 by the Corporation.

11 At page 990 of the transcripts, serious
12 losses make up about 10 percent of the loss costs for
13 motorcycles. For other classes, the importance is much
14 smaller.

15 The purpose of the averaging serious
16 losses is to reduce rate volatility as described by the
17 Corporation. However, on a comparative basis motorcycles
18 are disadvantaged relative to all classes since the
19 instability caused from large losses is greater, simply
20 since the share of cost is greater.

21 If volatility reduction is a goal as
22 described at page 991 of the transcript, the current
23 approach to -- to applying average large losses is only a
24 partial solution. The impact of this volatility is
25 especially evident given the change in -- in the required

1 rate for the class overall -- doubled to sixteen point
2 five (16.5) this year compared to 8.4 percent last year.

3 The Coalition offers an alternative for
4 consideration by the Board on that issue. Instead of
5 averaging serious losses and applying the ten (10) year
6 average, simply cap each serious loss at a half million
7 dollars with the excess amounts pooled; similar to the
8 treatment of unassigned claims and injury loss transfer
9 amounts.

10 If motorcyclists have more serious
11 accidents on a relative basis in other classes, the
12 higher frequency will be accounted for in the rate.

13 The coalition is supportive of the
14 Corporation's approach to accounting for loss transfer of
15 collision claims costs. It remains mystified with the
16 rationale that the actual costs can't be identified and
17 transferred, however it accepts the current approach.

18 With respect to single vehicle accidents,
19 as evident in cross-examination, the Corporation
20 indicated it has done little to investigate the data
21 inconsistency between Manitoba and other jurisdictions
22 related to single vehicle accidents. The reference is
23 the transcript at page 992.

24 The coalition notes the trend in the data
25 shown in CMMG-1-64.1 has reversed with single vehicle

1 accidents now decreasing; further, the data itself
2 changes.

3 For example, as shown in the same
4 response, single vehicle accidents as a percentage of
5 total claims for 1998 is now reported at 41.9 percent of
6 the total claims. When the motorcycle risk study was
7 performed several years ago, single vehicle claims were
8 only 22.9 percent of the total.

9 The change in trend and the remarkable
10 changes in the data itself causes the CMMG to wonder how
11 valid rates might be if the data behind them is
12 erroneous. The Corporation did indicate as part of the
13 PIPP allocation exercise, it had reviewed many motorcycle
14 claims files and revised the data.

15 The CMMG notes it does not appear that
16 this is an ongoing effort and the audit was not performed
17 independently.

18 The CMMG is still of the view that an
19 independent audit is needed of this data along with a
20 better explanation of the causal difference in single
21 vehicle frequencies amongst jurisdictions. This is
22 particularly important to motorcyclists since single
23 vehicle accident costs do not transfer and these costs
24 are driving motorcycle rate increases.

25 Single vehicle accidents include risk

1 factors that are not directly controllable by
2 motorcyclists and other vehicle owners such as collisions
3 with livestock and wildlife. With respect to wildlife,
4 it is hard to fathom how the motorcyclist or any other
5 motorist could be considered at fault regardless of what
6 the Highway Traffic Act stipulates.

7 With respect to collision with wildlife,
8 the cost of the single vehicle accidents is relatively
9 high for motorcyclists compared to other vehicle groups
10 as shown in CMMG-1-5.3. They were slightly over nine
11 hundred thousand dollars (\$900,000) in 2006; roughly 16
12 percent of our costs. These are accidents which are not
13 the fault of the motorcyclists and are a substantial
14 contribution to motorcycle claim costs and rates.

15 Where the collision is with a farmer-owned
16 livestock, the Corporation may attempt to collect from
17 the livestock owner. However, Ms. McLaren is quite
18 clear, shown on page 999, that it only occurs where there
19 is a cost benefit to do so and not PIPP costs. If PIPP
20 costs are not recovered or at least reassigned, there's a
21 relative inequity for motorcycles, relative to groups of
22 other vehicles.

23 Negligently managed livestock are likely
24 to cause greater impact on motorcycles than vehicle
25 owners such as trucks. If the Corporation does not

1 recover or reassign PIPP costs, motorcycle rates are
2 artificially inflated.

3 Clearly it is not their actions that
4 resulted in the accident. If it were another vehicle
5 that crossed the motorcyclist's path, that vehicle and
6 its driver would be responsible.

7 The CMMG's view is that costs related to
8 livestock and wildlife claims should be allocated across
9 all classification groups in the same manner as the pool
10 claims described at page 35 of the 2008/'09 rate making
11 methodology.

12 If there are concerns with the data at the
13 overall level, at the more refined level such as sport
14 bikes, the data is even more questionable, as is the
15 resulting rate indicators.

16 The data for sport bikes has a very low
17 level of credibility. The use of credibility does not
18 allay this concern that the data is weak since in MPI's
19 formulation the complement used is the existing rate.
20 Consequently, if the existing rate is built up over time
21 based on inadequate data, then the applied for rate is
22 also effected.

23 With respect to the assignment of
24 motorcycles to the sport classification based on the
25 horsepower to weight ratio, the Corporation was unable to

1 provide any information to show why it's reflective of
2 risks. Without this information it's difficult to accept
3 the current classification schemes for these vehicles.

4 The coalition suggests to the Board the
5 Corporation has not fulfilled its onus with respect to
6 sport bike classifications, and consequently the rate
7 differentials should be frozen until it has met that
8 onus.

9 Credibility also remains a concern for the
10 CMMG, simply since the Corporation uses an inconsistent
11 approach for motorcycles versus other vehicles, as
12 described at page 1,008 of the transcript. The CMMG
13 suggest that the Board Order this inconsistency be
14 eliminated in the next rate application for 2009/'10.

15 With respect to credibility, as described
16 in CMMG-2-16, there are alternatives to the policy based
17 approach used by MPI. The typical all -- alternate is to
18 use claims costs. MPI suggests that the credibility
19 issue was resolved with Order 148/04. However, that
20 Order dealt only with the debate over classical versus
21 Bowman credibility. It did not consider the basis of the
22 credibility calculation, for example, based on policy
23 versus claim numbers.

24 CMMG suggests that the Board Order the
25 Corporation to report on the effects on individual rates

1 of alternate approaches to the basis of the credibility
2 calculation. The CMMG is of the view that the alternate
3 acceptable practice of using a claims based credibility
4 approach would be more suitable.

5 With respect to the rate line adjustment,
6 the CMMG reviewed the Application of the collision
7 relativity with the Corporation during cross-examination,
8 as shown at pages 1,007 and 1,008 of the transcript. As
9 applied for by the Corporation, the rate line adjustment
10 flattens out at rate group 4 before continuing upwards.
11 This is in part due to the amalgamation of two (2)
12 different models for the collision rate group.

13 The CMMG is of the view that a more
14 consistent approach would be to use a single model, or
15 apply the model used for rate groups 5 through 9, to rate
16 groups 2 through 9.

17 Given the inconsistency in the line, the
18 CMMG is of the view that changes for 2008/'09 should be
19 held in abeyance and the suggested improved formulation
20 be applied as part of the 2009/'10 application.

21 The CMMG has an additional concern with
22 that rate line adjustment as well. Mr. Palmer suggests
23 at page 1,008 that the credibility of the PIPP data is
24 zero percent, even though it is the largest portion of
25 the cost. If the data is not credible, one is left to

1 wonder how it can be used in any form for rate
2 development for motorcycles at the rate group level.

3 Overall, with respect to motorcycle rates,
4 the CMMG is of the view that the motorcycle rates should
5 be held constant for 2008/'09. This is based on the
6 following considerations.

7 The first is the demonstrated ongoing
8 conservatism in the Corporation's approach to rate
9 setting, especially with respect to claims loss
10 development.

11 The second is the opportunity for the
12 Corporation to better control their costs.

13 Third is the need to review alternate
14 approaches to assign collision with wildlife and similar
15 claims.

16 Next is the need to review alternate
17 approaches to handling large losses from a rating
18 perspective.

19 Ongoing concerns, as well, with the
20 approach in -- approach to credibility, and the unknown
21 potential effects of using credibility with claims counts
22 as the basis.

23 The next would be continued concern with
24 the single vehicle accident data for motorcycles, and the
25 inconsistency of the Application of MPI's models to the

1 rate line adjustment.

2 The foregoing serve as a counter-point --
3 point to MPI's suggestion that multi-year rate
4 applications are appropriate. Since basically everything
5 that needs to be discussed through the Intervenor has
6 been discussed, and of course, that's the Corporation's
7 perspective, therefore all that is needed is the Board's
8 review.

9 The CMMG can assure this Board that it has
10 many current issues still to review with the Corporation
11 in this forum. As well, new issues will emerge in the
12 future; for example, differentials by motorcycle engine
13 displacement size.

14 With respect to the Corporation's argument
15 that all of the important Intervenor have been covered,
16 the Coalition prepared an analysis of the various rulings
17 since 1999, highlighting the non-rate authorization
18 issues which was fielded during the hearing process.

19 To suggest that the Orders and
20 recommendations and the rulings arose simply from the
21 Board's review does not stand up against the measure of
22 the orders.

23 It shows that the number of issues that
24 were identified by the Coalition or other Intervenor
25 which is -- which the Board, as indicated by its ruling,

1 must have considered having some merit.

2 Amongst these issues were pay-as-you-drive
3 brought forth by TREE, loss transfer, car rental issues
4 is brought forward by the MCTRA, inclusion of merit
5 discounts for delivery drivers, a process proposed by MPI
6 would thwart Intervenors and the public to bring new
7 issues that may emerge at any time to the Board.

8 MPI suggested that public input could be
9 met, perhaps, in its public review meetings. During
10 cross-examination, it was readily apparent that this is
11 not suitable since the public involvement of these
12 meetings, small, hardly delves into rate related matters
13 at the detailed level necessary to ensure the overall
14 public interest and the interest of individual
15 intervention groups is assured.

16 In this regard, the CMMG refers to the --
17 refers the Board to pages 1025 and 1026 of the
18 transcript. MPI cites multi-year application approach
19 used by Hydro and Centra Gas and MTS as examples of such
20 an approach.

21 MPI's analysis of the situation and view -
22 - in the view of CMMG is superficial and flawed. With
23 respect to Manitoba Hydro Electric, rate adjustments
24 typically take the form of an across-the-board increase.

25 There is not a range of rates ranging from

1 increases of more than 20 percent to decreases of more
2 than 20 percent that are typical of an MPI rate
3 application. There are relatively few rate classes used
4 by Hydro that receive those across-the-board increases.
5 There are roughly fifteen (15) to twenty (20), I
6 understand, of these rate classes used by Hydro.

7 Typically, a person and their neighbour
8 receive the same percent increase in rate.
9 Comparatively, there are about nine (9) to ten thousand
10 (10,000) different individual rates for motorcycles in
11 Manitoba.

12 Insurance classification, the rating is
13 significantly more complex with many individual rate
14 changes. A person and their neighbour will receive
15 different adjustments with some going up and some going
16 down; spawns a greater need for intense annual review.

17 With respect to Manitoba Hydro, Centra Gas
18 and MTS, one (1) word summarizes the flaw in MPI's
19 argument and that word is "choice". With respect to gas,
20 consumers are able to choose from other competitors such
21 as Direct Energy rather than buying from Manitoba Hydro's
22 Centra Gas.

23 And they also choose to use a different
24 energy source for heating; for example, many houses are
25 heated by electricity; some are heated by home heating

1 oil or propane.

2 When it comes to phone service, there's
3 competition in the traditional land line service -- for
4 example, Shaw -- so all consumers can choose from a host
5 of cellular carriers, completely avoiding traditional
6 landline service. With choice comes the opportunity for
7 customers to select different service and cost options,
8 something that is absent from MPI's coverage and pricing
9 approach.

10 This ability to switch makes multi-year
11 rates setting more reasonable in the case of gas and
12 phone service providers. Since if you don't like your
13 current rate or service level, you simply change.

14 With respect to gas, MPI also fails to
15 consider the fundamentals of the pricing regime. Basic -
16 - basically the price consumers pay for gas is not
17 controlled in Manitoba. It is set through international
18 market forces. This is unlike rates for MPI which are
19 predominantly needed by local market issues; for example,
20 labour costs for auto repair.

21 When considered in this context, MPI's
22 rationalization, based on the so-called similar
23 situations where multi-year rate application supply are
24 invalid. MPI also attempts to justify multi-year rate
25 applications as a cost saving initiative.

1 These cost savings are somewhat less than
2 seven hundred thousand dollars (\$700,000) annually. In
3 cross-examine the Information Request process, we saw
4 that the cost savings are a relatively minuscule part of
5 the operating costs to the Corporation; less than a 10th
6 of one percent as shown at page 610 of the transcript.

7 The savings the Corporation proposes in
8 eliminating public scrutiny are less than the cost of
9 post-retirement benefits, the healthcare benefits
10 described in CMMG-1-26.8.

11 Community relations costs of 1.3 million
12 described in CMMG-1-26.7 or the roughly 2 million in
13 public advertising information costs as shown in CMMG-1-
14 26.9. The latter has grown by four hundred thousand
15 dollars (\$400,000) in the last three (3) years.

16 The Corporation was unable to provide the
17 costs of executive retirement allowances which also could
18 be reduced from the excessive maximum of seventy-one (71)
19 weeks if cost savings are the goal. The CMMG is quite
20 disturbed the Corporation was unwilling to provide this
21 information as shown in response to CMMG-2-13.

22 As shown in the response, the average
23 executive compensation has grown by, roughly, thirty-
24 seven thousand (37,000) since 2005. In total, with eight
25 (8) executive, total costs have risen by about three

1 hundred thousand dollars (\$300,000) in the past four (4)
2 years.

3 The Coalition heard during the cross-
4 examination some of the expenditures on sponsorships were
5 based -- goals not directly related to the mandate of the
6 Corporation. As well, they heard that the cost benefit
7 analysis were considered absent, as shown at page 1038.
8 If cost savings are the goal of multi-year applications,
9 these examples show many opportunities for the
10 Corporation to reduce costs and perhaps even have greater
11 savings without jeopardizing public scrutiny of rates.

12 A final part of MPI's rationale is that
13 the PUB process takes staff away from other projects such
14 as the DSR or the Business Process Review. If the
15 Corporation is short of staff related to regulation and
16 more staff can be used to improve the equity of MPI
17 rates, the Corporation is supportive of a one (1) to two
18 (2) person staff increase in the actuarial and related
19 regulatory areas.

20 With respect to staff, it is noted that
21 the Corporation's general counsel function has grown from
22 seventeen (17) staff in 2003 to twenty-five (25) in 2007
23 and that's despite the elimination of the Tort process
24 and the new no-fault environment.

25 The Corporation implies throughout the

1 application process in hearing that the PUB had approved
2 the various methodologies used in the Application. The
3 CMMG is of the view that components of the methodologies
4 still have not been adequately reviewed and are subject
5 to change; an example of the aforementioned issue related
6 to credibility that I spoke about earlier this morning.

7 From the CMMG's perspective, what the
8 Board has approved is the outcomes of the methodologies,
9 not the methodologies and the assumptions within those
10 methodologies. The CMMG has many more questions related
11 to these assumptions and the information filed which are
12 specific to its view and can only be handled through
13 annual applications in hearings.

14 As we heard during cross-examination at
15 page 1027 of the transcript, many vehicle owners, in
16 addition to motorcycles, face a substantial change in
17 rates for 2008.

18 The multi-year applications for 2009/'10
19 and 2010/'11 provide no information as to the rate of
20 changes for individual vehicle owners. Without this
21 information, how will individual owners, either
22 represented individually or through groups such as CMMG
23 or CAC, receive a fair hearing of concerns that they may
24 have with those rates? The approach proposed by MPI
25 eliminates those important constituents from the process.

1 In summary, Mr. Chairman, the Corporation
2 has not made a case for multi-year rate applications.
3 The position of the CMMG is that such an approach is
4 detrimental to the public interest and the CMMG requests
5 the Board to rule against that.

6 As part of the proposed multi-year
7 process, the Corporation suggests there should be trigger
8 points for the release of excess RSR. Aside from the
9 concern that rates must be too high if multi-year
10 releases are occurring, the CMMG has several concerns
11 with their reserves.

12 First, reserves outside of the RSR
13 continue to grow. The PFAD grew -- grew by \$96 million
14 from 2002/'03 to 2006/'07 as shown at page 977 of the
15 transcript. Other financial reserves excluding unearned
16 premiums also grew by \$71 million in the same time
17 period, as shown in CMMG-1-48.1.

18 The concern of the CMMG is that within
19 acceptable and actuarial accounting limits, the
20 Corporation has room to increase reserves outside the
21 reserves required for the RSR. In a multi-year
22 application, the weight of the Intervenor would not be
23 brought onto that matter. This would allow for a buildup
24 of the reserves outside the RSR and inhibit the release
25 of rebates.

1 With respect to reporting, it is curious
2 to the CMMG that the Corporation hangs on to a
3 methodology that has not been approved. In financial
4 reporting, it shows the Basic RSR as not meeting target,
5 even though it exceeds the regulatory requirement. The
6 Corporation provides irrelevant material to the process
7 in this regard.

8 The DCAT report at a cost of forty
9 thousand dollars (\$40,000) is not a relevant input to the
10 proceedings. Perhaps the resources used for these
11 endeavours could be put to use in the DSR study, or in
12 motorcycle safety programming.

13 CMMG notes that the excess of RSR above
14 target was about \$78 million, or 11 percent of premiums
15 as at the end of May 2007, as described at page 981 of
16 the transcript.

17 At the end of August, the excess was even
18 greater with Basic having \$191 million in retained
19 earnings, plus 26.7 million in the Immobilizer Incentive
20 Fund, as described at page 256. The Corporate total was
21 \$352.3 million. In the view of the CMMG, a 10 percent
22 rebate in excess of 10 percent is in Order for 2007/'08.

23 CMMG's position is that it would be
24 preferable if the Corporation's rates were not too high
25 to begin with. However, as the conservatism and rates

1 itself is a risk mit -- mitigation approach, it is not
2 adverse to continued rebates. CMMG's position is size
3 and disposition of rebates should be determined by the
4 Board annually, with input from the Intervenors in the
5 form of the existing process.

6 A variety of matters related to Board
7 Order 156/06 are still a concern to the CMMG. At a
8 customer service level, the Coalition is surprised that
9 the Corporation has done little to provide assistance to
10 motorcyclists in declaring the value of their motorcycle
11 at the broker's office, as shown at page 1,047 of the
12 transcript.

13 As we heard last year, and again this
14 year, the cor -- consequence may be either undercoverage
15 for the motorcycle in the event of an accident, or
16 overpayment of the premium. The Corporation has not
17 fulfilled the requirement of this Order in spite of
18 having electronic databases that it could provide to the
19 brokers.

20 The coalition seeks the ongoing support of
21 the Board in this matter, hopefully with the Corporation
22 fulfilling its obligations soon.

23 As users provided by the Corporation's
24 special risk Extension division, either an Order to ex --
25 acquire extended income replacement benefits, or for

1 comprehensive coverage, the Corporation is unhappy that
2 excess funds for that division are being diverted to long
3 haul trucker education. The amount of this diversion of
4 funds seems unknown since, in its press release, the
5 Corporation suggested it was five (5) million, yet in
6 filings it provided with this application, as referenced
7 in CMMG-2.11-3, the total cost is 8.15 million.

8 The Corporation notes that the subsidy is
9 on top of the subsidy already received by the
10 interprovincial trucking industry, as the industry does
11 not pay premiums for PIPP coverage.

12 With respect to the latter, one of the
13 justifications the Corporation makes for the free ride for
14 truckers is that they're often engaged in business
15 outside of Manitoba. Similarly, there may be other
16 businesses that operate vehicles outside Manitoba for a
17 considerable part of the year, yet reside in Manitoba;
18 for example, a travelling salesperson, whose territory
19 includes Thunder Bay to Calgary. Their vehicle may have
20 most of its exposure outside Manitoba similar to long
21 haul trucks, but this benefit is not extended to those
22 type of businesses.

23 MPI suggested through the driver's licence
24 premium that the cost it claims based on the CMMG's
25 recollection of nearly \$5 million, is partially funded.

1 for motorcycles, the Corporation continues to put
2 motorcyclists in a high-risk position due to the lack of
3 coverage under lay-up policies; extended third party
4 coverage is not available.

5 For retirees or motorcyclists who lay
6 their vehicle ups, if another vehicle collides with their
7 vehicle while it is laid-up, that coverage is also not
8 available.

9 With respect to motorcycle pleasure use,
10 the Corporation continues to set rates at 10 percent
11 lower than the all purpose rates. As we heard in
12 previous years in cross-examination, the 10 percent
13 differential was selected on the basis of the pleasure
14 compared to all purpose use for private passenger
15 vehicles at the time the new class was established.
16 Using this basis, based on the response to CMMG-1-21.1,
17 the differential could easily be more than 20 percent.
18 Accordingly, the CMMG requests the differential be
19 increased.

20 With respect to the driver safety rating,
21 while willing to accept the Corporation's representation,
22 it will make a special application for that new program.
23 The CMMG is concerned with the delay that has occurred to
24 date. The Coalition sees the new plan as an important
25 opportunity for the Corporation to be innovative in its

1 solutions.

2 With respect to overall customer service
3 satisfaction levels, the Corporation reported in response
4 to CMMG-1-52.1 that it does not have data specific to
5 motorcyclists. The suggestion of the Coalition to the
6 Board is that the Corporation refine its data collection
7 procedure allowing for satisfaction levels to be measured
8 by broad types of vehicles; for example, motorcyclists,
9 ORVs, commercial trucking.

10 The level of satisfaction for these groups
11 may be substantially different than for the overall pool
12 of vehicles. The Coalition notes the Corporation does
13 have the ability to query the public in some detail about
14 their views of motorcycle risks shown in CMMG-2-17.

15 Motorcyclists are also the owners of other
16 vehicles. On average, motorcyclists have 1.3 other
17 vehicles; such, the CMMG has a significant interest in
18 rate and classification adjustments for private passenger
19 and other vehicles.

20 The inconsistency in comprehensive
21 coverage, which is not provided automatically as part of
22 the motorcycle policy, it is included as part of the
23 typical passenger vehicle policy, may be problematic for
24 some motorcyclists who assume that the coverage is
25 consistent.

1 The Coalition is of the view the
2 Corporation has two (2) options related to that matter.
3 First, it could cover comprehensive losses on motorcycles
4 under the Basic plan. Alternately, it could prepare a
5 consumer study for review for the 2008 hearings that
6 confirms that motorcyclists are aware of the difference
7 in coverage.

8 Motorcyclists also own vehicles that are
9 affected by the Immobilizer Incentive Program. CMMG has
10 several suggestions that may help strengthen the Program.

11 The first relates to the add-on charges
12 when the immobilizer is installed and there are examples
13 of that: the new battery identified in PUB-1-51, key
14 fobs, remote starters. The Coalition suggests MPI
15 include those within the amounts it funds. And then the
16 most-at-risk vehicles, we suggest that there are some
17 anomalies in the data related to my questions on the
18 Yukon Suburban.

19 The Coalition suggests then, in those
20 situations, twins or related vehicles would be added to
21 the MAR list.

22 Warranty. We believe the immobilizer
23 installation is also an issue, particularly as the
24 program winds down around 2010 or 2011. We know that
25 from the Hearing that approximately 1 to 2 percent of the

1 owners will have problems post-installation.

2 And not expectedly, one (1) of the affects
3 of hardening vehicles against theft has been the rise in
4 vandalism and attempted theft claims over the last year's
5 as shown in CMMG-1-4.8.

6 The Coalition understands the situation
7 for total theft, attempted theft and vandalism claims the
8 owner is responsible for the Basic deductible and so in
9 that case, the victim then is being penalized.

10 We also had some questions relative to
11 whether that's going to result in other criminal activity
12 if they can't find vehicles to steal such as carjacking,
13 home invasions. The Corporation is very indignant,
14 indicating that they'd worked with the police and the
15 people in the know in terms of theft, and so they were
16 able to rule out those kind of consequences -- unintended
17 consequences.

18 However, that's completely at odds with
19 the data that they provided relative to the rise in
20 vandalism and attempted theft claims to date.

21 The Coalition has an upgrade in the -- has
22 an interest in the upgrade in vintaging process for
23 passenger vehicles and light trucks. It's our view that
24 the -- as a price of a vehicle -- the accident benefit
25 rate group would increase and the vehicle price

1 relationship to the accident benefits doesn't make any
2 sense.

3 As clear from the example in CMMG-1-61.6
4 that price is driving the increase in rate groups, while
5 vehicle prices have risen by about seven thousand dollars
6 (\$7,000) or 25 percent. At the same time there's no
7 increase in the maximum insured value range, forcing
8 consumers to buy Extension coverage in many cases.

9 With respect to the price effect in the
10 CLEAR model and as related to declared values, the Corp -
11 - the Coalition is of the view that the Board should
12 compel the Corporation to file a justification for its
13 current approach to assigning accident benefit rate
14 groups related to the maximum insured value as part of
15 its 2009/'10 application.

16 The lack of activity related to motorcycle
17 road safety is a significant concern for the CMMG. If
18 motorcycling is truly a riskier activity compared to
19 other types of motoring, then one would expect the
20 Corporation would be spending a higher amount of its
21 safety programming budget for motorcycling than other
22 types of travel. The Corporation seems to spend
23 proportionately less.

24 As part of the cross-examination process,
25 the Coalition outlined a number of safety programming

1 initiatives from the National Agenda for Motorcycle
2 Safety. As shown at pages 940 to 952 of the transcript,
3 the Corporation has not considered many of those
4 initiatives.

5 The CMMG requests the Board order the
6 Corporation to prepare a thorough review of each of the
7 initiatives in the guide and provide a report describing
8 each initiative, their decision whether or not to
9 implement that initiative, the reasons for their decision
10 and implementation dates as part of next year's rate
11 application.

12 A brief summary, Mr. Chairman, with
13 respect to the MPI's 2008/'09 rate proposal, the
14 Corporation's of the view, based on the reasons
15 described, that the rate requirement is too high due to
16 conservatism in the estimating process. As well there's
17 the potential for MPI to reduce its operating costs.

18 With respect to the rebate the CMMG is of
19 the view a rebate in excess of 10 percent is warranted.

20 You have our thoughts as well on the
21 multi-year rate application. We do not believe such an
22 approach is in the public interest for the multiple
23 reasons we gave.

24 Outstanding matters, as an overall
25 principle the Coalition is of the view that when a

1 recommendation or Order is made by this Board that it
2 should be adequately vetted and deliberated upon by the
3 Board and this public forum.

4 Consequently, all matters should be
5 responded to by the Corporation either in the form of
6 implementing the recommendation or Order or providing a
7 detailed written submission in the subsequent application
8 as to the barriers to implementing the recommendation or
9 Order, at which time it would be again potentially open
10 for a public review.

11 The onus would be on the Corporation to
12 convince the Intervenors and Board as the need to change
13 the recommendation or Order. Until the process is
14 complete, the recommendation or Order should stand as a
15 requirement for the Corporation.

16 At this time, the Coalition has a keen
17 interest in MPI implementing two (2) specific
18 recommendations.

19 The first is the matter of the regulation
20 of the Extension lines of business. Motorcycles are
21 important users of the products for those lines,
22 particularly Extension Comprehensive and Lay-up, and
23 those -- we've heard throughout that those are, in
24 essence, monopolies leaving the Coalition and other
25 Manitobans who are dependant on these products with

1 little consumer protection, and in many cases, products
2 that are not sufficient.

3 Again with respect to the MPI multi-year
4 forecast, over the last number of years MPI has produced
5 financial statements for the rate application process
6 that have proved to be conservative when tested against
7 the actual final results. A key source of the
8 conservatism has been understating investment income, as
9 well as with respect to claims forecasts.

10 The CMMG has some comments relative to
11 environmental matters, that there should be a greater
12 consideration of the environmental risk in the MPI risk
13 rating plan. There are alternatives. The pay-as-you-
14 drive certainly is an alternative. There's such other
15 methods as environmental effects into the assignment of
16 rate group, or in making rating adjustments at the
17 classification level.

18 In terms of priorities, from the CMMG's
19 perspective, the top priorities are increasing work on
20 road safety, with a focus on motorcycles, an improved
21 monitoring of operational costs and driver safety rating.

22 The Coalition wishes to thank the Board,
23 the other Intervenors, and the Corporation in its
24 participation, and look forward to many years of annual
25 participation in these hearings.

1 THE CHAIRPERSON: Thank you, Mr. Oakes.
2 Before we move on to Mr. Dawson, we'll
3 have our break now. Thank you.

4
5 --- Upon recessing at 10:29 a.m.
6 --- Upon resuming at 10:46 a.m.

7
8 THE CHAIRPERSON: Okay, Mr. Dawson...?

9
10 CLOSING COMMENTS BY CBA/MBA:

11 MR. ROBERT DAWSON: Thank you, Mr.
12 Chairman. It's the position of my client that the
13 applicant, MPI, has ignored an Order of this Board that
14 dates back to 2004, relating to the cla -- to the
15 development of claim benchmarks. And we submit that at
16 least two (2) submissions flow from this failure to
17 comply with the Board's directive.

18 First, the failure undermines those who
19 would challenge the way in which MPI handles the claims
20 of victims of personal injury.

21 And secondly, it disentitles MPI from
22 seeking a multi-year rate application.

23 I'll deal with those in turn, and I'll
24 start by way of reminding the Board that on the 3rd of
25 December, 2004, an Order was made that MPI develop claim

1 benchmarks, then compare those benchmarks with its own
2 claims experience and that of other no-fault
3 jurisdictions and agencies and file a summary of those
4 findings with the Board.

5 And that Board Order was of course Number
6 148/04, and the specific Order appears at page 93 of that
7 Order.

8 My client submits that this Board then
9 recognized, and indeed I'll suggest continues to
10 recognize, that benchmarking is a useful management
11 practice.

12 Benchmarking enables both the applicant
13 and this Board to formulate informed views on cost
14 controls. The comparison of the applicat -- applicant's
15 operations to establish benchmarks, and the comparison of
16 other appropriate insurers to such benchmarks, would help
17 underlying areas where the applicant could improve its
18 service to Manitobans.

19 At one end, the results of such a study
20 could show indeed that MPI has brought its operations
21 well in line with established benchmarks, and that there
22 really is no substantial room for improvement.

23 That essentially would deal with many of
24 the complaints that at least my client has asserted over
25 the years.

1 At the other end, deficiencies could arise
2 and be identified as a result of such a benchmarking
3 study, and that would in turn help this Board to curb
4 unnecessary expenses and make other orders and
5 recommendations.

6 Of course, the Board appreciates that
7 there is a significant number of Manitobans who question
8 the way in which MPI handles claims, especially those
9 arising out of personal injuries sustained as a result of
10 the operation of a motor vehicle.

11 When I had first assumed conduct of the
12 Manitoba Bar Association's regular intervention before
13 this Board, some four (4) hearings ago now, my client
14 instructed me to examine closely the way in which such
15 claims were being handled. The record will show that
16 through extensive Information Eequests over the years,
17 the Bar Association compelled the production of
18 information ranging from the training of adjusters to the
19 way in which MPI's medical experts were instructed to
20 assess personal injuries.

21 Beginning at page 1169 of the transcript
22 for the 2005 GRA, I went through a number of points with
23 Mr. Bedard and Ms. McLaren principally. Although MPI's
24 position in closing argument was to dismiss the validity
25 of the concerns that were expressed through cross-

1 examination, I suggest that, at the very least, one must
2 agree that the evidence gave a reasonable person grounds
3 to consider that MPI, at least, might be handling
4 personal injury claims in a different way than it then
5 was.

6 At page 61 of its 2004 reasons for
7 decision, the Board summarized the submission of the
8 Manitoba Bar Association noting that:

9 "The MBA had urged [and I quote] the
10 Board to direct MPI to undertake a
11 comparative study of the handling of
12 personal injury claims by the WCB."
13 End of quote.

14 The Order's summary of the MBA's position
15 that year noted concerns of what the MBA had described as
16 MPI's, unnecessarily adversarial, handling of personal
17 injury claims and the unfamiliarity of most claimants
18 with the general principles of proving an insurance
19 claim. In short, the MBA had expressed a concern about
20 what it had described as deficiencies in the way that MPI
21 handles personal injury claims.

22 Of course, underlying this concern is the
23 reality that where a claim is wrongly denied or reduced,
24 a claimant is effectively deprived of benefits to which
25 that person has a statutory right and, indeed, also a

1 contractual right. More relevant to the proceedings
2 before this Board such a mishandling of a personal injury
3 claim means that although collected pursuant to premiums
4 that this Board sets and on the premise that the
5 applicant will use those revenues pursuant to its
6 legislative framework, revenues are in those
7 circumstances not being applied in the way that the
8 applicant has represented to this Board that they are and
9 will be used.

10 A benchmark study would be directly
11 relevant and helpful in the assessment of the MBA's
12 submission. First, and I am mindful of the fact as MPI
13 often notes, that there is a distinction between a
14 benchmarking study which focuses upon cost controls and
15 other forms of analysis that might look at the way in
16 which MPI handles personal injury claims. So cost
17 handling and cost controls are not the same thing, I
18 concede, but for the reasons that I'll soon get to, I'm
19 going to suggest there is a close and intimate connection
20 between those two (2).

21 I return, then, to the notion of how a
22 benchmark study might be directly relevant and helpful.
23 First, of course, a comparison between actual and best
24 practices could show that MPI's cost controls in the area
25 of personal injury claims are excessive, thus supporting

1 the express concerns of the Bar Association over the way
2 in which the applicant handles personal injury claims.

3 Secondly, a comparison between actual and
4 best practices could further support the submission that
5 where a claim is wrongly denied or reduced, the result is
6 surplus revenue contrary to the legislative framework
7 that governs the applicant's operations, and also
8 contrary to the representations that the applicant makes
9 to this Board when seeking approval of rates.

10 Of course, the results of such a study
11 could also have the effect of supporting the rebuttal
12 that MPI has mounted to the negative submissions made
13 about the way in which it handles personal injury claims.

14 Yet, despite its relevance and indeed
15 importance as we all know, MPI did not file the ordered
16 benchmarked study in 2005 and this omission prompted this
17 Board on November 14th, 2005 to remind MPI of its
18 outstanding obligation.

19 At page 47 of Board Order 150/05, the
20 Board's 7th recommendation borrows from the original
21 Order but changes the wording stating that MPI should and
22 I quote:

23 "Develop claims handling PIPP and other
24 operating cost benchmarks, perform
25 analyses comparing MPI experience with

1 that of other comparable insurers and
2 file a report with the Board at the
3 next GRA proving the findings." End
4 quote.

5 When MPI again failed to file the
6 benchmark study as part of its 2007 rate application,
7 that is last year's rate application, the MBA again
8 pressed the applicant for an explanation.

9 In our first round Information Requests,
10 we saw production of the IBM contract for the roadmap, as
11 it's being called, of the study. And then we went on to
12 cross-examine Mr. Bedard about that roadmap and the
13 eventual study which appears at the transcript of last
14 year's Rate Application Hearing, beginning at page 1027
15 line 18.

16 During that exchange, Mr. Bedard provided
17 the description of the benefit of benchmarks. At page
18 1028 line 17 of last year's transcript, he talked about
19 quote:

20 "Allowing the system to provide you
21 with data in terms of how you're
22 performing, in terms of the frequency
23 and duration of treatments, length of
24 income replacement based on injury
25 type, the demographics of the type of

1 claimants you're dealing with allowing
2 you to have more data in which to
3 understand your business, understand
4 what the drivers are and ultimately
5 understand what your cost implications
6 are." End of quote.

7 Perhaps as a result of that exchange this
8 Board last year gave yet another reminder to the
9 applicant in its Board Order 150/06 of November 20th,
10 2006. The Board set out as its 3rd recommendation at
11 page 85 that MPI, and I quote:

12 "Develop claims handling, PIPP and
13 operating cost benchmarks and perform
14 analyses trending developments and
15 comparing MPI experience with that of
16 other comparable assurances."

17 And of course, that brings us to the
18 current year where MPI has again not filed the benchmark
19 study that this Board ordered in 2004.

20 Through my cross-examination of Ms.
21 McLaren, we have the admission of the president of the
22 Manitoba Public Insurance Corporation at page 899, line
23 5, of this year's transcript that she agrees with the
24 proposition that where the Public Utilities Board makes
25 an Order, as opposed to a recommendation, in its reasons

1 for decision, that Order is binding and dictates the
2 actions of the applicant.

3 Board counsel and other Intervenors have
4 pressed and, indeed I know, will press the applicant
5 about past orders and recommendations, but my client
6 wishes to focus especially upon that one (1) specific
7 ignored Order that dates back to 2004.

8 And it's for that reason that I asked Ms.
9 McLaren, at page 897 of this year's transcript, to report
10 on the work or lack of work that the applicant has
11 completed on the ordered benchmark study.

12 At line 8 of page 897 she explained that
13 quote:

14 "We have not started to collect and
15 report on our data or the data from
16 other no-fault insurers to compare the
17 result of the measure."

18 She then added at line 11 of page 897 that
19 quote:

20 "The measures themselves have been
21 described as best we know about them a
22 year ago." End quote.

23 Referring, I think, to the IBM roadmap
24 study about which I had cross-examined Mr. Bedard during
25 the GRA 2006.

1 And so a whole year apparently could go by
2 without making progress useful to this Board's oversight
3 of MPI. Rather tellingly, I remember Mr. Bedard speaking
4 last year, at page 1026 of the transcript starting at
5 line 22, about the usefulness and indeed the elusiveness
6 of conducting and implementing benchmarks. He said that,
7 quote:

8 "Creating benchmarks, establishing them
9 and monitoring our own business and
10 comparing it with other organizations
11 of like programs, it's been around for
12 a long time. It's much easier to
13 articulate than to do."

14 Such words will worry onlookers, in the
15 catch phrase of the day, it will instill perhaps shock
16 and dismay causing such onlookers to worry or wonder if
17 benchmarking has essentially become, shall we say, the
18 term paper that gets assigned in October only to find
19 that it still sits unfinished in December on the night
20 before the assignment is due and, indeed, we now know
21 well after the deadline for its submission.

22 We know, from the evidence, that part of
23 the problem is the Applicant's unnecessary insistence
24 that it should broaden the benchmarking study beyond what
25 this Board has required. Indeed, the Board will recall

1 that during the 2007 GRA at page 1032 of the transcript
2 at line 13, Ms. McLaren agreed with me that I suggested
3 that, quote:

4 "The work that MPI has been doing goes
5 far beyond what the Board has ordered
6 MPI to do." End quote.

7 Apart from the earlier expressed business
8 and regulatory reasons that would urge compliance with
9 the 2004 Order and result in filing a benchmark study,
10 there are less, shall we say, financial considerations.

11 Indeed, every year before this Board there
12 are presentations from ordinary Manitobans that
13 critically point to the handling of their personal injury
14 claims.

15 For example, in this year's proceedings
16 one (1) presenter, whose testimony appears at page 219 of
17 this year's transcript, recounted her own experience with
18 MPI after her daughter had suffered a devastating injury.

19 While surely, as I've said before, there
20 is a distinction between claims handling and claims
21 costs, and while it is to be admitted that benchmarking
22 focuses upon costs and their control, I submit that there
23 is a connection and we find that connection especially in
24 the presentation that appeared before us this year.

25 As that presenter spoke, it became clear

1 to those listening that she felt that MPI was depriving
2 her daughter of benefits to which she thought her
3 daughter was entitled. Now putting aside whether or not
4 her conclusions as to entitlement are correct, the
5 presenter, nonetheless, pointed in support of her
6 allegation to what, I suggest, may be properly
7 characterized as a series of cost controls.

8 There was the question, for example, of
9 whether or not it was justified to pay the cost of a
10 tutor for someone whose head injury might, shall we speak
11 in the harshest possible terms, cause any learning to be
12 quickly forgotten.

13 Although, in more general terms, the Bar
14 Association has over the years pointed to the operations
15 of MPI and suggested the way in which it handles personal
16 injury claims reflects a preference to control costs over
17 serve claimants.

18 I point also to this year's transcript
19 where I sought to confirm that in my conversation with
20 Ms. McLaren, starting at page 909, line 5. There, she
21 confirmed that since 2004, when I had first asked Mr.
22 Bedard about it, the handling of personal injury claims
23 really has not changed significantly.

24 And over the years, the Bar Association
25 has asserted that any wrongful denial or deduction of

1 benefits is a breach of the Applicant's statutory
2 obligation and, of course, that too is hardly a
3 controversial statement which is why MPI has always
4 accepted that premise and this year is no different, and
5 we find the admission at page 915, line 23 of the
6 transcript.

7 Given that benchmarks are as an objective
8 a standard as possible by which to measure the
9 performance of an organization and by which to test the
10 validity of assertions, such as advanced by my client,
11 and given how vital it is that benefits should actually
12 be paid in the way and amounts to which claimants are
13 entitled, the Bar Association submits that the need for
14 the benchmark study as ordered in 2004 continues.

15 And so what should we do? Well, it's not
16 my client's function to usurp the role of Board counsel
17 and advise the Board on available options to enforce its
18 judgment or its Order. Instead, I propose to suggest a
19 less confrontational course of action. It is certainly
20 our submission that the benchmark study is indeed useful.

21 It's our further submission that because
22 it addresses cost controls relating to, among other
23 things, personal injury claims, such a study can go a
24 long way towards demonstrating or, it's conceded,
25 negating arguments that such claims are mishandled as a

1 result of inappropriate cost considerations.

2 And so one approach to tacking the
3 benchmark study is simply to break it down into
4 manageable components. As it presently stands, the
5 benchmark study, by the admission of MPI itself, goes
6 beyond what this Board is asking. It also tries to
7 compare MPI to other insurers, even where, as Mr. Bedard
8 told us la -- during last year's GRA at page 1029, line
9 7, most other insurers do not even have the data that
10 would be needed to conduct a comparative bench marking
11 study.

12 Fortunately, Ms. McLaren's answer to my
13 question at page 1035, line 3 of last year's transcript
14 gives us the solution. She says, and I quote:

15 "I think the most important
16 consideration for Manitoba Public
17 Insurance is benchmarking itself
18 against its past experience. I think
19 that this is the first thing that would
20 certainly be our priority." End of
21 quote.

22 She goes on, of course, to assert the
23 usefulness of also comparing MPI to other insurers, but
24 the key that I wish to emphasize to this Board is that
25 she acknowledges that the benchmark study is divisible,

1 and she identifies in a helpful way, the highest priority
2 of that study to be MPI's ability to compare itself and
3 its own performance against best practice benchmarks.

4 On that same page of last year's
5 transcript at line 1, Ms. McLaren reminds us that the
6 benchmarking process, quote:

7 "Will be an iterative process that will
8 be building through time."

9 And I submit that here is a further
10 helpful solution. Benchmarking can apparently be an
11 overwhelming project even for a corporation with the
12 financial and manpower resources of MPI.

13 But if this study were to focus, at least
14 initially, upon MPI's internal operations instead of
15 looking to comparable insurers, and if everyone,
16 including the Intervenor, such as my client, understood
17 that these benchmarks may evolve over time instead of
18 being perfectly established from beginning, it becomes
19 possible that this benchmarking program might move
20 forward in compliance with the Board's Order from 2004.

21 Otherwise, to return to the words of Mr.
22 Bedard:

23 "Benchmarking has been around for a
24 long time and we all fear that it might
25 be with us for a lot longer time yet to

1 come."

2 And so my client submits that the
3 appropriate disposition is this Board's inclusion in its
4 reasons for decision this year of a three (3) part
5 direction to the applicant that first -- and in the words
6 of the original Order set out in Board Order 148/04 at
7 page 93:

8 "MPI develop claim benchmarks for
9 duration, frequency and cost."

10 Secondly, that:

11 "MPI compare those benchmarks with its
12 own experience."

13 And thirdly:

14 "File a summary of those benchmarks
15 with the Board at the next general rate
16 application."

17 My client further submits that this Board
18 include a further direction that would separate out the
19 comparison of benchmarks with other no-fault
20 jurisdictions and agencies, because this seems to be a
21 significant problem to overcome.

22 That brings us to the issue of how to
23 express these directions, namely as orders or
24 recommendations. Assuming this Board accepts the premise
25 that benchmarking is an important, if not essential

1 practice that would help the Board and indeed all
2 Manitobans, in the testing of the effectiveness and
3 appropriateness of MPI cost controls, my client urges the
4 Board to frame its first direction to the applicant in
5 the form of an Order, not a mere recommendation.

6 That is, Order the applicant to develop
7 benchmarks on the very limited and focussed topics of
8 duration; frequency and cost of claims; Order a
9 comparison of MPI's own experience to those benchmarks,
10 and Order the filing a sum -- of a summary of those
11 benchmarks at the next GRA.

12 The second directive on comparative
13 benchmarking might, at least at this stage, take the form
14 of a recommendation.

15 Of course, this Board surely appreciates
16 the distinction between an Order and a recommendation,
17 and I submit that the applicant correctly interprets the
18 law when, at page 898, line 20 of this year's transcript,
19 Ms. McLaren agreed with my statement of the proposition
20 that, quote:

21 "Where a recommendation is made by the
22 Board, it has no compulsive effect. It
23 is merely a suggestion that the
24 applicant may or may not choose to
25 follow."

1 thought by many to be no good, it is not a war to be
2 fought, in my view, in this particular theatre. However,
3 this Board does take an interest, and continues to take
4 an interest, in the way in which the applicant disburses
5 premiums to its claimants.

6 While the Manitoban Bar Association is,
7 therefore, the logical Intervenor to press MPI,
8 especially on its failure to comply with that particular
9 Order of this Board, my client's interests in the
10 benchmarking study -- or, more precisely, the failure of
11 MPI to file a benchmarking study -- prompts questions
12 about the applicant's proposal to adopt a multi-year rate
13 application process.

14 My client takes no position on multi-year
15 rate applications in general, but it certainly does
16 concede that it is within the jurisdiction of this Board
17 to grant such an application.

18 Indeed, there are compelling reasons that
19 favour such an approach. It would reassure the applicant
20 about how its short and mid-term plans will unfold. It
21 allows an applicant to focus upon fulfilling its
22 legislative mandate instead of justifying its past
23 actions under public scrutiny of a rate application.

24 And, of course, as the applicant here has
25 stated, it offers economies to the applicant, saving it

1 the cost of filing a general rate application and then
2 responding to matters that arise out of that application.

3 At the same time, as is certainly obvious,
4 there are indeed benefits to the filing of an annual
5 application.

6 First, the operations and viability of an
7 insurer depend very much upon uncontrollable situ --
8 circumstances that necessarily vary and change over time.
9 And such variations and changes would logically increase
10 beyond predictable ranges as the amount of time increases
11 into the future.

12 Proposed triggers, such as those that the
13 applicant has set out that would require the applicant to
14 submit to direct oversight by this Board in the interim,
15 do not necessarily address most of those sorts of
16 uncontrollable circumstances.

17 The second benefit of an annual
18 application is especially relevant to the operation of a
19 monopoly enterprise because new issues, and especially
20 fresh political policy considerations, may arise over
21 time that prompt a review of the status quo.

22 Thirdly, and possibly the most obvious if
23 not most important, an annual application presents a
24 framework by Manito -- by -- a framework by which
25 Manitobans might test the way in which this statutory

1 its arbitration process. Now none of these issues
2 eventually figured prominently into the overall hearing
3 process, but I'll submit that privacy concerns and
4 transparency of process are important and they come to
5 light only because of the involvement of Intervenors such
6 as the Manitoba Bar Association.

7 While the applicant would have this Board
8 pay attention to the financial costs of such hearings, I
9 point out -- or rather I point to the Undertaking 18 that
10 MPI gave in response to the questions by Board counsel
11 which sets out how MPI gives away all -- well hundreds of
12 thousands of dollars each year in community event
13 sponsorship.

14 And perhaps flippantly I simply note that
15 for less money than it gave away to sponsor a golf
16 tournament or two (2) an Intervenor can be funded to
17 review MPI's application, test its assumptions, come at
18 issues from a particular angle of some interest or
19 expertise and, I'll suggest, assist this Board in the
20 oversight and evaluation of the applicant's rate
21 proposal.

22 While these might be compelling reasons
23 that support the annual application process there is, in
24 this particular circumstance, a more fundamental reason
25 to reject the proposed multi-year rate application. And

1 my concluding remarks, I can conc -- indicate to the
2 Board that, pursuant to its rules of procedure, I'm
3 indicating that my client intends to make an application
4 for an award of costs.

5 I can also advise the Board that it is
6 with genuine appreciation that the Manitoba Bar
7 Association thanks the Board for allowing it to intervene
8 in these proceedings. My client appears here not to
9 benefit its own members, but rather to promote the fair
10 administration of justice which benefits all Manitobans.

11 We do not seek to advance any particular
12 or partisan view, but rather try to offer the Board a
13 broader public policy approach to the issues that present
14 themselves in the course of the rate application.

15 And my client trusts that the Board finds
16 its participation useful. As always, I thank the Board
17 for its preparation and attention. My thanks also to
18 Board staff and Board counsel for their guidance; to MPI
19 and its witness panel for their courtesy and cooperation;
20 and to My Learned Friend, especially Mr. Williams, with
21 whom, as in past years, I've collaborated in order to
22 avoid duplication of efforts in these proceedings.

23 Failing any questions, that concludes my
24 client's submission.

25 THE CHAIRPERSON: Thank you, Mr. Dawson.

1 I am aware that Mr. Williams' final --
2 concluding statements will take some time. So I'm
3 wondering, in the interest of process, if some of the
4 others perhaps don't have such long submissions, I'm
5 wondering, Ms. Wankling, does the CAA have anything to...

6 Well, there's a suggestion. What about
7 you, Professor Miller? Are you...

8 DR. PETER MILLER: I've got about fifteen
9 (15) or twenty (20) minutes.

10 THE CHAIRPERSON: Then why don't we move
11 along with you now then? Thank you.

12 So we'll -- we'll proceed now with
13 RCM/TREE, which is Dr. Miller.

14 DR. PETER MILLER: Thank you very much.
15 I guess that's my brief that's being distributed there.

16 THE CHAIRPERSON: Yes, we have it.

17 DR. PETER MILLER: I did e-mail it in
18 last night.

19 THE CHAIRPERSON: If you want, sir, you
20 could either go through it entirely or we can put it on
21 the record and you can just deal with highlights. It's
22 up to you.

23

24 CLOSING COMMENTS BY RCM/TREE:

25 (WRITTEN SUBMISSIONS)

1 First I wish to apologize to the PUB, to
2 MPI and to the other participants that I was unable to
3 participate in the oral proceedings, other than to file a
4 written opening comment and to present in person these
5 closing comments. I was simply too overwhelmed with
6 other commitments to prepare a proper cross-examination.
7 I have, however, had a cursory look at the PAYD study
8 released shortly before these proceedings and have read
9 the transcripts.

10 RCM and TREE, as indicated in my opening
11 remarks on October 3rd, have intervened a number of times
12 before the PUB on the premise that gas, electricity, and
13 insurance rates and policies should reflect the public
14 interest as defined by principles of sustainability and
15 justice. In previous proceedings we have argued that
16 there is a strong prima facie case that the addition of a
17 distance-based rating factor, or Pay As You Drive
18 insurance, would promote both these principles better
19 than the present system.

20 Both the PUB and MPI have indicated that
21 they recognize the applicability of Manitoba's
22 Sustainable Development Act to MPI, and both have
23 acknowledged the urgency of addressing climate change
24 mitigation.

25 In Order 156/06, the PUB requested MPI to

1 gather information and examine approaches to Pay As You
2 Drive (PAYD) insurance options

3 "along with other initiatives to
4 enhance sustainable development
5 objectives."

6 The Board further observed:

7 "Transportation emissions are a major
8 contribution to overall greenhouse gas
9 (GHG) emissions and a recognized danger
10 to the environment. With a monopoly
11 motor vehicle insurer, Manitoba has an
12 opportunity to utilize the premium
13 system as well as a new Driver Safety
14 Rating program to encourage reduced
15 discretionary driving, and the choice
16 of vehicle.

17 The SDA requires all public bodies to
18 pursue environmental objectives; MPI
19 and the Public Utilities Board, though
20 a Crown Corporation and a quasi
21 judicial administrative tribunal,
22 respectively, are among that number.

23 (Order 156/06, p. 75)

24 In July 2007, MPI initiated research on
25 these matters, which is reported in their PAYD study

1 submitted at the end of August. MPI has also indicated,
2 in last year's hearing, that they find a tension or
3 conflict between the original MPI mandate to make
4 affordable vehicle insurance accessible to all Manitobans
5 and the demand management called for in Guideline 1 of
6 Schedule B of the Sustainable Development Act. MPI
7 indicated a willingness to work with stakeholders and the
8 province to identify appropriate roles for the
9 corporation in support of sustainability and GHG
10 mitigation. To this end, Ms. McLaren undertook to
11 contact the Centre for Sustainable Transportation (CST)
12 at the University of Winnipeg to convene a workshop group
13 "to discuss potential roles for MPI in
14 addressing sustainability issues in
15 general and climate change issues in
16 particular in the transportation
17 sector."

18 Although the initial contact between Ms.
19 McLaren and the Centre has occurred, the working group
20 has yet to be convened.

21 In his closing remarks last Wednesday, the
22 Chairman asked the parties to consider a number of items.
23 Three of these were (a) consideration of outstanding
24 directions or recommendations made by the Board in
25 previous orders; (b) the question whether the

1 environmental impacts related to motor vehicles should be
2 taken into account in rate setting; and (c) what should
3 be MPI's priorities in its unfinished business?

4 My brief response to these points is that
5 the issue of identifying MPI's role in addressing
6 environmental impacts related to motor vehicles, is quite
7 unresolved and a pressing priority that has been deferred
8 for too long. My hope is that the working group process
9 can generate specific recommendations that meet MPI's
10 requirement that they stem from provincial government
11 consultation. Some of those recommendations may in turn
12 lead to further review by the PUB at next year's
13 proceeding.

14 But that raises the question of whether,
15 with the initiation of a multi-year application process,
16 there would even be a proceeding next year. Our position
17 is that either there should be a proceeding next year as
18 long as the Board's sustainable development and other
19 directives have not been addressed or that the Board pre-
20 approve at this point the implementation of one or more
21 pilot projects or other recommendations arising from the
22 yet-to-be-convened working group on sustainability
23 measures. Indeed I would hope that PUB staff be able to
24 participate in the working group to keep abreast of the
25 process and remind the group of the PUB's interest in

1 these matters.

2 Let me point out that the PAYD study
3 released at the end of August was released too late to
4 allow for a proper discovery process or to be the subject
5 of expert testimony, so its consideration is very much
6 unfinished business.

7 It is encouraging that a review of these
8 issues has begun, but since it was pushed off for a year
9 after last year's GRA, a number of the points we raised
10 then continue to be pertinent now and are restated, with
11 some commentary, below.

12 1. MPI is obviously conflicted in trying
13 to reconcile its historical mandate with emerging climate
14 change policies and the encompassing requirements under
15 the Sustainable Development Act. The Manitoba Public
16 Insurance Corporation Act and the Public Utilities Board
17 Act are not the only applicable pieces of legislation. A
18 broad vision of the public good is provided through the
19 Sustainable Development Act. We submit that the SDA
20 itself constitutes the clear instruction from the
21 Province that MPI says is lacking. In particular we have
22 emphasized Guideline 1 of Schedule B of the Sustainable
23 Development Act, which calls for demand management with
24 appropriate pricing and incentives and full-cost
25 accounting to inform decision-making.

1 A premise of the multi-year application is
2 that, through previous hearings and Board Orders, a
3 consistent set of principles and methods have been
4 developed that will continue to be applied into the
5 future. The problem with this premise is that whatever
6 consistency there is was achieved without the
7 consideration of Guideline 1 of the SDA and through
8 successive postponements of the Board's instructions to
9 investigate the issue. It is a narrow consistency based
10 on a pre-SDA mandate and should not be allowed to
11 continue unchallenged into the future.

12 2. There is a need to improve MPI's
13 database, research and policy deliberations to address
14 sustainability issues. In particular, MPI should augment
15 its collection of mileage data at the time of annual
16 vehicle registration and claims.

17 3. We acknowledge that MPI's PAYD Study
18 has provided a survey of implemented Pay-As-You-Drive
19 systems that is helpful in identifying some of their
20 different attributes. Note, though, that actuarial data
21 was unavailable for this study. The absence of data from
22 other sources underlines the importance of MPI augmenting
23 its own database and analysis as well as seeking access
24 to other insurers' data and research.

25 4. We also acknowledge that MPI has

1 undertaken some research into transportation elasticities
2 relative to price changes in gasoline. the conclusion is
3 overstates, however, when it moves from the technical
4 definition of an inelastic response (the percent decrease
5 in consumption is less than the percent increase in
6 price, i.e., not hugely responsive) to

7 "Manitobans have not been responsive to
8 gasoline price increases..." (p.4).

9 This means that pricing, by itself, is not
10 a single magic bullet and that other factors, such as
11 those identified in the analysis, may also be operative
12 trending in a different direction.

13 5. MPI should investigate distance and
14 risk relationships. Again, this would require an
15 augmentation and analysis of the MPI database. In the
16 past, MPI has stressed the legal obstacles, but if
17 mileage readings were recorded for every claim, not just
18 write-offs, and reported for the annual vehicle
19 registration, there would be no need for any kind of new
20 law for that. MPI's information brochure to the public
21 indicates that the Corporation gathers information for
22 various purposes including the development of future rate
23 policies. This would be in line with that.

24 6. The implications of full cost
25 accounting need to be taken up by MPI as a framework for

1 decision-making. What are the social and environmental
2 costs of vehicle use and how can MPI policies contribute
3 to their mitigation?

4 7. MPI should do more to identify or
5 brand itself as a corporation subject to the Sustainable
6 Development Act.

7 8. MPI should develop educational
8 messages that promote sustainable development in the
9 transportation sector. Some of these messages, e.g.,
10 leave your car at home and take a bus, not only reduce
11 GHG but relieve traffic congestion and opportunities for
12 accidents, which helps MPI with its claims and helps the
13 medical system by reducing its caseload.

14 MPI has gone a good distance in promoting
15 sustainable practices within its own operations, but
16 still has a ways to go in its public role. Whether
17 through further recommendations or orders or other means,
18 the PUB should offer MPI every encouragement and guidance
19 to proceed down this path.

20

21 (WRITTEN SUBMISSION CONCLUDED)

22

23 DR. PETER MILLER: Well, I'll -- it's --
24 it's fairly short. I'll maybe just -- just highlight it.

25 And no doubt you're wondering who this

1 stranger is before you, and I do have to apologize that
2 other commitments simply overwhelm me. I could not
3 prepare appropriate cross-examination and so on.

4 So I've had the benefit of what -- what
5 occurred here by reviewing the transcripts and had a -- a
6 brief look at the Pay-As-You-Drive Study.

7 Our interventions in this and the
8 Utilities, Centra Gas and Electricity, have been based on
9 the principles of sustainability and justice. And we
10 believe that these principles should guide policy and
11 rates.

12 And so that's -- that's the perspective
13 that we have been pursuing in a -- in a number of these
14 interventions. And I've made a detailed argument for the
15 appropriateness of pay-as-you-drive in previous hearings.

16 The PUB and MPI both acknowledge the
17 Sustainable Development Act applies to them and both
18 acknowledge the urgency of addressing climate change
19 issues. So at that level of principle there doesn't seem
20 to be an argument.

21 Order 156/06, the PUB requested the MPI to
22 gather information, examine approaches to pay-as-you-
23 drive and I'm going to quote their observations in
24 connection with that:

25 "Transportation emissions are a major

1 contribution to overall greenhouse gas
2 emissions and a recognized danger to
3 the environment.

4 With a monopoly motor vehicle insurer,
5 Manitoba has an opportunity to utilize
6 the premium system as well as a new
7 driver safe -- safety rating program to
8 encourage, reduce discretionary driving
9 and the choice of vehicle.

10 The SDA requires all public bodies to
11 pursue environmental objectives. MPI
12 and the Public Utilities Board or Crown
13 Corporation - a quasi judicial
14 administrative tribunal, respectively
15 - are among that number."

16 And I think I -- I -- we have before us
17 the -- the survey of Pay-As-You-Drive plus some studies
18 related to some of the related issues of elasticities.

19 But Ms. McLaren last year indicated that
20 it wasn't primarily technical issues that led her to balk
21 at introducing it. It was policy issues.

22 And -- and so to address that side of --
23 of the concern, she agreed to contact the Centre of
24 Sustainable Transportation at the University of Winnipeg
25 to convene a working group that would include Provincial

1 officials to look at this material, look at the issues,
2 look at the policy questions, as well as the data,
3 presumably, and come up with a set of recommendations.

4 So that has been initiated in the sense
5 that the contact was made, but the meeting hasn't been
6 called. I saw an agenda over the summer proposed by CSD
7 which would have had about three (3) or four (4) meetings
8 con -- completed by this time, but that hasn't happened
9 yet. And of course, during this process no one is
10 available.

11 So I'm looking forward to that, as the
12 altern -- alternative forum that we said we preferred
13 during the pre-hearing conference, and we're looking for
14 what might come out of that.

15 If it has to do with some new rating
16 scheme, then presumably the PUB might wish to review
17 that. And this relates to the -- the multi-year
18 application question again. And Mr. Oakes referred to
19 that, that the pay-as-you-drive has not been resolved.

20 So unless the PUB is prepared to pre-
21 approve going ahead with pilots or other initiatives,
22 from a practical standpoint, I -- I would accept that.
23 That's up to the -- the PUB whether it cares to do that.

24 I -- I think the time is not right,
25 because of the unfinished business, for multi-year

1 applications. The premise for a multi-year application
2 is that all the Basic issues have been resolved and that
3 we have a coherent, consistent methodology and -- and
4 scheme for insurance.

5 But that is, I submit, is too narrow a
6 consistency. It was -- it's a pre-Sustainable
7 Development Act consistency. It doesn't include,
8 specifically, the instructions of Guideline 1 in Schedule
9 B of the Sustainable Development Act to work appropriate
10 incentives in -- in the light of full cost accounting.

11 And so I -- I don't think that the current
12 set of methods should be permitted to continue
13 unchallenged into the future.

14 I'll leave it to the Board as to how to --
15 how to handle that issue, but the -- the premise is one
16 that we would challenge.

17 The Pay-As-You-Drive Study came out, I
18 think, August 31st, at the very end of the summer and too
19 late for the discovery process or -- or to have any
20 expert review. And so that in itself is -- is unfinished
21 business. I'm hoping that this working group can have a
22 look at it, and -- and make use of it.

23 So because the issue has been pushed off
24 two (2) years, many of the conclusions that I -- I drew
25 last year are still appropriate. And my concluding

1 remarks lists them there, and I think I'll just let you
2 put that into the record, the -- the various issues that
3 I think are outstanding. Thank you very much.

4 Thanks for conceding the time.

5 THE CHAIRPERSON: Thank you, Professor
6 Miller. We'll enter into the record your written brief.

7 DR. PETER MILLER: Thanks.

8 THE CHAIRPERSON: Is CAA prepared to
9 proceed at this point?

10 MS. DONNA WANKLING: Yes, Mr. -- yes, Mr.
11 Chairman, we are.

12 THE CHAIRPERSON: Then please go ahead.
13 Thank you.

14

15 CLOSING COMMENTS BY CAA:

16 MS. DONNA WANKLING: Good morning, Mr.
17 Chairman, members of the Board, ladies and gentlemen. My
18 name is Donna Wankling and with me this morning is Mike
19 Mager, President of CAA Manitoba.

20 With regard to the 2008/2009 rates, CAA
21 acknowledges that we do not have the expertise to fully
22 and completely analyse the proposed '08/'09 rates. So as
23 in the past fifteen (15) years, we will leave this issue
24 to the Public Utilities Board and its expert advisors.

25 However, we do have a comment relating to

1 approved immobilizers, CAA fully recognizes that the
2 immobilizer is a very important part of the auto theft
3 problem but it is not the total solution.

4 In fact, over several days of testimony we
5 listened as it was pointed out that thefts have decreased
6 but theft attempts are skyrocketing. Our concern is that
7 we are on the cusp of an impending explosion of vandalism
8 arising from the attempted thefts that will offset any
9 gains made to eliminate the actual theft problem. Our
10 understanding is that vehicle owners pay the full
11 deductible of vandalism claims. As we've sat here and
12 listened to the whole issue of auto theft as it relates
13 to the installation of immobilizers, the thought occurs
14 to CAA that although we are perhaps solving one (1)
15 aspect of auto theft, we may in fact be masking the
16 entire problem.

17 By this we mean that as we bring down the
18 total number of vehicles available for easy theft as we
19 immobilize them, what is going to be hit in its stead?
20 Certainly we've talked about vandalism increasing but
21 perhaps carjackings, house break-ins, etcetera will be,
22 no doubt, increasing because of our success in minimizing
23 actual car thefts.

24 We've heard MPI witnesses suggest that
25 after we've immobilized all the most-at-risk vehicles,

1 quote:

2 "Thieves will give up." end quote.

3 CAA believes that they will turn their
4 attention to other things rather than give up. Our
5 concern is that all of us in this room, namely the Public
6 Utilities Board, its advisors, MPI and all of us that are
7 intervening have a larger societal obligation to insist
8 on proper interventions to bring about proper societal
9 change.

10 This means that people beyond this room,
11 namely Government and the Justice System, need to be part
12 of the solution and we, collectively, need to hold their
13 feet to the fire to accomplish this.

14 At the present time we are taking them off
15 the hook by some of the things that motorists are being
16 double taxed on. For example, when MPI participates in
17 paying for a Crown prosecutor and other functions in the
18 justice system and when they fund police departments in
19 Winnipeg, more that Brandon, the RCMP and the Dakota
20 Ojibway service, the motorist is in fact paying twice;
21 once through their general tax payment and again through
22 their Autopac fees. Why? What was to have been a
23 startup cost for any of the police issues has now taken
24 on the appearance of permanent funding.

25 On the issue of MPI's funding of the --

1 for the Immobilizer Program, we were astounded to hear
2 MPI suggest that Extension has more than paid their fair
3 share of the costs of immobilization. They suggest that
4 the transfer from Extension Surplus to RSR was monies
5 that prepaid Extension's portion of the Immobilizer
6 Program, CAA finds this incomprehensible because this
7 transfer occurred before the Immobilizer Program was
8 completely ruled out.

9 On the issue of retained earnings, CAA has
10 consistently pointed out that the Extension portion of
11 MPI's business is not a competitive line anymore and
12 should be under the auspices of this Public Utilities
13 Board.

14 MPI acknowledged during these hearings, in
15 a very casual way, that 90 percent of Basic insurers in
16 this Province utilize MPI for Extension coverage. By any
17 Basic textbook or 101 course, this constitutes a
18 monopoly.

19 Monopolistic utilizations of MPI's
20 products were supposedly under the purview of the Public
21 Utilities Board as set out by the Government when
22 creating the mandate for this Board to watch over MPI.
23 If at that time Extension coverage was not as
24 monopolistic as it is now and was therefore excluded, it
25 certainly is not the case today.

1 Any earnings of Extension products would
2 be impossible without Basic policies being written by MPI
3 and the ability to so easily put Extension into effect
4 through their Autopac online programming paid for by
5 Basic insurers. Clearly, the issue of Extension earnings
6 and buildup of reserves in the Extension area needs to be
7 changed. We intend to follow up on this issue.

8 On the issue of PIPP. Back when the
9 Government moved MPI into a no-fault system, CAA opposed
10 the change. We were concerned that ultimately some
11 claimants would in fact be hurt by this move. Over the
12 years since then, CAA has monitored the continuing
13 increase in PIPP costs and notes that these costs are not
14 abating.

15 More importantly than this, CAA originally
16 was concerned with claimants being unable to understand
17 their rights totally with the need to rely on MPI staff.
18 The actual case brought forth by the single mother on the
19 first day of this hearing reminded CAA of the reason why
20 we opposed no-fault in the first place. Whereas the
21 rights of the now paraplegic daughter are by law covered,
22 the actual policy set out by MPI may not be properly
23 serving her.

24 This case completely and totally reminded
25 CAA why we opposed the PIPP program and we add our

1 concern to that of other Intervenors about getting the
2 PIPP Review done and not put off again.

3 The integration of DDVL into MPI
4 operations has created a significant example of
5 transparency problems. The absorption of staff into MPI
6 operations cannot be fully followed because MPI says they
7 are now doing different functions than before and so the
8 full cost of these employees are no longer attributed to
9 DDVL only.

10 Following this explanation, CAA asks the
11 question of why then has the total number of employees
12 increased as significantly as it has? Again, because the
13 cost of DDVL is being charged to Extension and all of us
14 at these hearings are not allowed to follow the money.
15 The transparency of the transfer of employees is
16 compromised.

17 With regard to the multi-year application,
18 CAA submits that MPI stands for Manitoba Public
19 Insurance. By moving towards a multi-year process, it
20 removes the public from any of these proceedings. CAA
21 has heard MPI indicate that the public participation
22 would be facilitated at their information sessions; these
23 information sessions would replace this PUB Hearing. But
24 in answer to Mr. Oakes, Ms. McLaren indicated that the
25 number of people attending those information sessions is

1 typically minimal and is comprised of people who have a
2 specific problem with the adjudication of some part of
3 their claim, much like those people attending this
4 Hearing in the afternoon on the first day. So in
5 essence, the public part of any of these rate hearings is
6 removed if we proceed to a multi-year process.

7 As we've stated, CAA has participated in
8 these hearings for many years. When we first became part
9 of this process, MPI's financial capabilities were at the
10 point of bankruptcy and MPI needed all of us to help
11 build up their income, their reserves, and their ability
12 to operate on a long-term basis.

13 CAA, along with others sitting as
14 Intervenors today, became part of the solution to the
15 extent that we agreed to be overbilled by 2 percent per
16 year in Order to build up reserves and the ability to
17 continue to operate. Along the way we participated
18 fully; at times, differing with others on items such as
19 funding, extensive computerization and other projects.
20 The net result out of all of this is that MPI is now
21 overflowing with riches.

22 In CAA's opinion, it is at this particular
23 time that transparency of rate-making and the requirement
24 of the Public Utilities Board to oversee this process is
25 critical. We would not wish to see a repeat of the

1 intention of MPI to fund universities, as an example,
2 with motorists' money. Nor do we want to see history
3 repeated by having a negative financial situation arise
4 as happened when we first became involved.

5 MPI's reason for putting forth a multi-
6 year application at this time is based on the fact that
7 when earnings and operating results are as positive and
8 predictable as they claim, under the Legislation they are
9 allowed to ask for a multi-year process. MPI puts forth
10 the argument that there is considerable savings to be
11 made in a number of ways; namely, financial and people.

12 When questioned in detail about this, the
13 financial savings of one tenth (1/10th) of 1 percent of
14 total billed premiums and two and a half (2 1/2) people
15 out of the total MPI workforce is hardly a solid reason
16 to proceed at the expense of public participation.

17 Mr. Chairman, in our opening remarks, CAA
18 stated that we appreciated the opportunity to participate
19 in this public transparent process.

20 We've noted that during our time at these
21 hearings, we've witnessed how dramatic the fluctuations
22 can be within a twelve (12) month timeframe, when the
23 reality of what has transpired has been significantly
24 different than the predictions initially set forward.

25 The opportunity for all stakeholders to

1 meet in this public forum for the purpose of discussing
2 auto insurance rate -- rates set by the MPI monopoly is a
3 critical component. The very fact that Manitoba's
4 automobile insurance is a monopoly demands this.

5 We have no other choice but MPI. We have
6 no ability to vote with our wallet by going to another
7 insurer if we don't like decisions made in the absence of
8 this Board.

9 The prospect of a multi-year process is
10 akin to drawing a curtain around MPI. What is currently
11 an open process, open to public scrutiny, suddenly
12 becomes more opaque with little or no opportunity for
13 questions, dialogue, or debate.

14 CAA believes that a multi-year process for
15 Manitoba Public Insurance is wrong, and we do not support
16 it.

17 With regard to Board Orders and
18 recommendations, similar to other Intervenors, CAA
19 believes that abiding by Board Orders and its
20 recommendations is incumbent on MPI. In CAA's view,
21 recommendations should be either followed or the
22 reasoning for not doing so explained fully by MPI.

23 To not follow this as a principle is in
24 effect having MPI question the PUB process, triggering a
25 CAA memory of MPI's attitude towards the Public Utilities

1 Board process some fifteen (15) to sixteen (16) years
2 ago.

3 In closing, CAA would like to thank the
4 Public Utilities Board, their advisors, our fellow
5 Intervenors, and finally the MPI witnesses. In
6 particular, we'd like to acknowledge Barry Galenzoski,
7 who over the years has added significant value to these
8 hearings. We wish you well, Barry, on your retirement,
9 while at the same time we recognize that MPI and Manitoba
10 are losing a VIP when it comes to auto insurance.

11 Mr. Chairman, this concludes CAA's
12 comments.

13 THE CHAIRPERSON: Thank you, Ms.
14 Wankling. We appreciate it.

15 Now, I don't see Mr. Roberts from MUCDA
16 here, so I think what we'll do, Mr. Williams, if you
17 don't mind, we'll take our lunch break now, come back at
18 1:00, and then you can proceed uninterrupted.

19 MR. BYRON WILLIAMS: That's fine, Mr.
20 Chairman. I'm certainly prepared to go at 12:30 if it
21 assists the Board. We have some other obligations in
22 terms of the Pay Day Lending proceeding, but we can go at
23 1:00 if -- if you desire as well.

24 THE CHAIRPERSON: What's your view, Mr.
25 McCulloch?

1 MR. KEVIN MCCULLOCH: Well, Mr. Chairman,
2 at some point, I'm going to need time to prepare some
3 responses to comments made by the Intervenors to date.
4 We either do it now, or we do it later. I don't know how
5 long a presentation Mr. Williams is planning.

6 THE CHAIRPERSON: Can you give us an
7 idea, Mr. Williams?

8 MR. BYRON WILLIAMS: I'm guessing about
9 an hour and a half to upwards of that.

10 THE CHAIRPERSON: Well, why don't we come
11 back then at -- have a short lunch. Come back at 12:30,
12 and then we can have a break and give you a half an hour
13 to make any adjustments that you want to make. How's
14 that?

15 MR. KEVIN MCCULLOCH: I think that should
16 work fine. Thank you.

17 THE CHAIRPERSON: Okay. We'll come back
18 at 12:30. Thanks to everyone.

19
20 --- Upon recessing at 11:44 a.m.

21 --- Upon resuming at 1:34 p.m.

22

23 THE CHAIRPERSON: Okay, Mr. Williams, any
24 time you are ready.

25

1 CLOSING COMMENTS BY CAC/MSOS:

2 MR. BYRON WILLIAMS: Thank you and good
3 afternoon, Chairman -- Mr. Chairman, and Board Members.
4 Just of the Board's assistance -- first of all, I should
5 note that Ms. Desorcy was here for much of the morning.
6 She had to leave to teach a class at -- at the
7 university, so she bids a fond adieu to the PUB
8 proceedings for this year relating to MPI. I think
9 she'll be back in short order on Payday Lending, though.

10 Just for the Board's assistance, as well,
11 there are -- and, of course, you don't need to refer to
12 it, but to assist you in following the argument, there
13 are five (5) CAC/MSOS exhibits I may be referring to.

14 One is the pretty green book, CAC/MSOS
15 Number 3, also CAC/MSOS Number 8, Number 9, Number 10,
16 and Number 12. And just to assist the Board, as well, in
17 terms of the subjects that I'm proposing to cover this
18 afternoon, I'll start with the multi-year plan. I'll
19 move into operating and administrative costs and then
20 into PIPP, road safety, auto theft, issues of cross
21 subsidy, the driver safety rating, and then provide some
22 recommendations in terms of the revenue requirement and
23 the RSR rebate, as well as addressing some issues which
24 the -- the Board posed in the last day of the hearing.

25 As I move from each section -- for example

1 when I leave the section relating to the multi-year plan,
2 I'll make some recommendations on behalf of my clients,
3 at that point in time.

4 And just to start off, by way of hopefully
5 relatively brief intro, as the Chairman and the Board may
6 be aware, this year we're celebrating the 25th
7 anniversary of the Public Interest Law Centre. And it
8 was initiated way back in 1982 under then Attorney
9 General, Mr. Roland Penner. The Legislature, at the
10 time, expressly amended the Legal Aid Act to allow the
11 Public Interest Law Centre to represent public interest
12 groups, and expressly included in there was a reference
13 to consumer groups.

14 And as you may or may not be aware, one
15 (1) of the very first clients our office ever
16 represented, and we still have the honour of doing so
17 today, was The Consumers' Association of Canada, the
18 Manitoba branch. And as a review of past Board orders
19 would make evident, the Public Interest Law Centre and
20 CAC have been there for many of the battles over the past
21 two and half (2 1/2) decades with regard to telecom
22 issues, Hydro issues, in the early days, natural gas
23 issues, as well.

24 And the Public Interest Law Centre in CAC
25 were there in those dark early days when public interest

1 groups, Intervenors, were reviewed by at least some
2 parties to regulatory proceedings as interlopers, as mere
3 busybodies in those early years, who added very little to
4 the regulatory process, except additional costs.

5 And the Public Interest Law Centre and CAC
6 were there in those dark early days when interested
7 parties, public interest groups, were denied participant
8 funding. And PILC, on behalf of CAC and other consumer
9 groups led the battle in Court and in regulatory
10 proceedings before the Public Utilities Board to -- to
11 bring interested parties, public interest groups, to
12 their rightful place be -- they would submit anyways,
13 before Public Utilities Board, via the participant
14 funding mechanism.

15 And way back in 1984, after many years of
16 effort, the Public Utilities Board amended its process,
17 its procedures, to allow for the -- the awarding of costs
18 awards to interested parties, public interest groups.

19 Over time the Consumer coli -- Coalition
20 that CAC initiated was added to and expanded to include
21 our friends at minu -- Manitoba Society of Seniors. And
22 my current clients in this proceeding, CAC/MSOS, like to
23 think that over the past 25 years most individuals in
24 this room would concede the pollo -- public interest
25 groups have made a significant contribution to the

1 regulatory debate in matters relating to Hydro, natural
2 gas, and particularly MPI.

3 Now, I haven't been before the Public
4 Utilities Board for as long as My Friend, Mr. Kruk, or My
5 Friend, Mr. Galenzoski, or perhaps My Friend, Mr.
6 Saranchuk, but I have been here a long time. And I'd
7 like to -- and I'd like to just summarise for the Board
8 some of the many contributions that I would suggest of
9 public interest groups such as CAC/MSOS, CAA, CMMG, the
10 Manitoba Bar Association, and TREE have played.

11 And in my client's respectful submission,
12 these public interest groups have played a critical role
13 in stimulating debate and pushing corporate and
14 regulatory decision making on issues such as, for
15 example, the diversification of the Corporation's
16 investment strategy.

17 I remember the lonely days in the early
18 1990s when a CAC/MSOS witness argued for a much more di -
19 - diversified portfolio so that MPI did not continue to
20 lose out on opportunities in the equities market; issues
21 such as risk analysis and the RSR rebate.

22 And I remember when Mr. John Todd on
23 behalf of CAC/MSOS, first mentioned the idea of a rate
24 rebate. Mr. Oakes' clients have been important in issue
25 -- raising issues relating to more equitable treatment of

1 motorcyclists, including the Great Loss Transfer Debate.
2 And consumer groups such as CAC/MSOS and CAA have been at
3 the forefront, even in this decade, in fighting efforts
4 by the Corporation to budget for a loss in revenue
5 applications have been brought before this Board.

6 Likewise, CAA and CAC/MSOS argued for more
7 rapid implementation of clear, notwithstanding the pain
8 that it caused to some classification sales. CAC has
9 been long offering a voice in terms of road safety and
10 CAA in terms of auto theft. And of course, there's the
11 tremendous contributions of Dr. Miller in terms of
12 sustainability and issues relating to pay-as-you-drive
13 and other issues.

14 So, my clients would argue that on
15 balance, consumer involvement in the regulatory process
16 has done a tremendous service for all Manitoba driv --
17 drivers and for the public interest.

18 And a -- my clients also recognise that
19 this positive contribution that consumers have made would
20 not have been possible without the buy-in of the
21 Corporation and the buy-in of the Public Utilities Board
22 and its advisors.

23 And my clients see, in other venues, a
24 growing recognition of the value that public interest
25 groups can make to informed regulatory debate. They see

1 the recommendations of this Board with regard to Centra
2 Gas, where Centra has been recommended to it, that it
3 consult with CAC/MSOS on issues such as demand side
4 management, consumer education, bill formatting, and
5 survey and focus groups.

6 And they see it the efforts of other
7 public-owned insurers across western Canada. They see
8 the recent initiative by Saskatchewan -- SGI referenced
9 at page 70 -- 764 of the transcript, the customer council
10 initiative.

11 They see as well the efforts by ICBC for
12 increased consultation with stakeholders in terms of rate
13 design. Again, that's referenced at page 764 of the
14 transcript.

15 And that is why my clients are so
16 perplexed and so disappointed that MPI, without even
17 consulting with consumer groups, has brought forward its
18 multi-year application process, the likely consequence of
19 which will be to effectively shut public interest groups
20 and consumers out of the regulatory decision-making
21 process in 2009/2010 and 2010/2011 -- even in
22 circumstances as extreme as where the Corporation is
23 seeking a \$20 million rate increase or in circumstances
24 where major classes could be facing rate increases of as
25 much as 15 percent.

1 And it's been covered today, but perhaps
2 it's important before going any further to make it clear
3 exactly what the Board is being asked to approve by the
4 multi-year application of MPI.

5 MPI has confirmed that this is a multi-
6 year process it's seeking approval for, not a multi-year
7 application. The only application before the Board and
8 for consumers that they're being asked to passed judgment
9 on is for the '08/'09 year.

10 The Board and consumers are not being
11 asked to pass judgment on or to offer advice on forecast
12 costs for '09/'10. They're not being asked to approve
13 forecast costs for 2010/2011.

14 And unless that one single digit, that
15 actuarially -- that actual indicator is greater than 3
16 percent, my client's submission is that the MPI proposal
17 is for consumers to be essentially shut out of the
18 regulatory process in '09/'10 and 2010/2011.

19 Now you may suggest that the language I
20 use is too strong, but take a look if you would -- and
21 you don't need to refer to it now -- but the
22 Corporation's responses to CAC/MSOS second round 22, and
23 second round 25 found at the PUB book of documents at
24 Tabs 35 and 36.

25 What does MPI suggest is a primary vehicle

1 for consumer input in those years 2009/2010, 2010/2011?
2 Public information meetings. And then look at the
3 bizarre suggestion made by the Corporation in the course
4 of this proceeding at page 620 that the Board perhaps
5 could be the intermediary between the Intervenors and
6 ourselves in those years.

7 The logic of the MPI application -- the
8 proposal as CAC/MSOS understand -- it is that for the
9 2009/2010 year the 2010/2011 year there would be a rate
10 application. There would be costs the PUB would be
11 forecast -- asked to sit in judgment on -- on. There
12 would be significant changes to the proposed rates for
13 the major classes and for the thousands of classification
14 cells.

15 But unless the actual indicator was
16 greater than 3 percent the PUB would be asked to sit in
17 lonely judgment without the benefit of a public hearing,
18 without the benefit of cross-examination, and without the
19 benefit of the input of public interest groups.

20 As Board counsel, Mr. Saranchuk,
21 eloquently suggested at page 623 of the transcript the
22 essential thrust of the multi-year process proposed by
23 MPI is that the Public Utilities Board appears to be
24 requested to fulfill its mandate and act in the public
25 interest without participation of the public interest

1 groups.

2 My client struggled to get at the
3 essential thrust of the MPI application, their opening
4 statement. They may look to retain Mr. Saranchuk in the
5 future because I think he did a better job of it than I
6 might of.

7 Well does it make sense? Does it make
8 sense for MPI to shut public interest groups out of the
9 regulatory decision making process for those two (2)
10 years? On behalf of CAC/MSOS we will respectfully
11 suggest that it does not.

12 We -- and first of all we'll suggest that
13 MPI cannot rely upon regulatory pre -- the regulatory
14 precedence of telecom, Natural Gas or Hydro to justify
15 its position. And we will also make it clear that the
16 costs of the MPI process far outweigh the less than
17 compelling benefits that they've offered to date. As a
18 starting point, we would ask this Board to recall that
19 there is a key distinction between Public Auto Insurance
20 customers and oth -- and other customers.

21 And that distinction is that it is simply
22 not practical to employ a multi-year rate application for
23 MPI. Although my clients do not necessarily endorse the
24 practice, they concede that with a utility like Manitoba
25 Hydro, it is possible to have a multi-year Rate

1 Application.

2 We can be fairly confident that the cost
3 being forecasted -- to the forecasted projected years can
4 be reasonably tested. We can also be reasonably con --
5 confident in the Hydro sense that even if there are
6 changes from year to year in the cost allocation between
7 respective classes, of which there's only nine (9) or ten
8 (10), those changes will not rou -- result in
9 unconscionable rate impacts if deferred for a year.

10 There's a zone of reasonableness when we
11 look at Manitoba Hydro Rate Applications. And the -- the
12 volatility of cost allocations between classes is much
13 less than the volatility that would occur when you look
14 at the thousands of classification cells promoted and
15 administered by Manitoba Public Insurance.

16 And MPI concedes this, in their response,
17 the first run interrogatory, the PUB Number 64, and in
18 response to cross-examination at pages 635 and 636 of the
19 transcript. It concedes it is not realistic po --
20 realistically possible for the Corporation to file a two
21 (2) year GRA because of the material movement due to rate
22 group and rate line adjustments.

23 And as Mr. Palmer observed, there is a
24 necessity to adjust rates on an annual basis to ensure
25 the integrity of the classification system. As Mr.

1 Palmer confirmed, clear rate groups are updated annually
2 as vehicles age and as loss experience is recorded.

3 As Mr. Palmer confirmed, by not adjusting
4 rates on an annual basis and requiring a two (2) year
5 adjustment, that could result in large rate dislocations
6 or rate shocks. Put another way, as confirmed by Mr.
7 Palmer at pages 640 and 641 of the transcript, unlike
8 Manitoba Hydro, the major classes within Manitoba Public
9 Insurance do not have a postage stamp rate.

10 In contrast to less than the ten (10) rate
11 groups Manitoba Hydro -- of Manitoba Hydro which may have
12 differentially indicated rates, within Manitoba Public
13 Insurance there are lit -- literally thousands of
14 classification cells with a different actuarially
15 indicated rate and with the strong likelihood that the
16 relationship and the individual rate between these
17 classification cells will change on a year-to-year basis.

18 I want to take a -- a moment to look at
19 different regulatory models relating to telecom or
20 natural gas and hydro, not as an endorsement of those
21 models, but to make the point that what those models
22 offer to consumers are far superior to what the Manitoba
23 Public Insurance multi-year Application offers to
24 consumers.

25 And we would note that in -- that MPI in

1 its media backgrounder, that's at Volume I of the
2 Application, seem to be saying that its multi-year
3 process was bringing its rate setting process in line
4 with that of electricity, natural gas distribution, and
5 local telephone services.

6 But we were glad to hear Ms. McLaren
7 reject this point at page 660 of the transcript, lines 18
8 to 20, when she said:

9 "I would not say it all, but this is
10 the Corporation's perspective with
11 respect to the multi-year Rate
12 Application."

13 Because the fact is clear that the multi-
14 year proposal advanced by M -- MPI is not in the least
15 comparable to the CRTC price cap regime or the regulatory
16 regimes of Centra Gas or Manitoba Hydro. In my -- my
17 opening statement on behalf of my clients, I made the
18 suggestion that MPI was making a tortured analogy between
19 its multi-year rate process and the regulatory
20 environment experienced by ratepayers of MTS, Hydro, and
21 Centra.

22 I've carefully reflected upon the words
23 and I believe the phrase, "tortured analogy" was an
24 understatement. In the respectful view of CAC/MSOS, the
25 multi-year process envisioned by MPI bears no

1 relationship to these other models. It's but a frail,
2 impoverished shadow of the productivity, accountability
3 and savings offered to consumers under the price cap
4 model; or the productivity, accountability, and
5 transparency of the models employed with regard to Centra
6 and Hydro.

7 Let's take a look at telecom. And if the
8 Board is interested, the -- an excellent summary of the
9 telecom price cap regime appears in CAC/MSOS Exhibit
10 Number 3, the pretty green book at Tab 6. And a starting
11 point is to recognize that the telecom regulatory regime
12 is a regime unlike any other; unlike the cost of service
13 model for MPI and Manitoba Hydro, unlike the traditional
14 model for Centra of rate base -- rate of return.

15 The telecom model is a PBR model, a
16 Performance Based Regulation. The -- in which ratepayers
17 and com -- regulated companies are offered the light
18 hand, a lighter hand of regulation in return for
19 guaranteed productivity serv - savings put directly back
20 into the pockets of consumers.

21 And again, the -- a nice summary of this
22 model can be found in the excerpt from telecom decision
23 CRTC 202-34, and I won't drag you through it in burden --
24 burdensome detail. But it's important to understand
25 first of all the environment in which price caps is

1 bought -- brought into place; a much more competitive
2 environment then under the MPI model; viciously
3 competitive in the long distance side, even in the ear --
4 in the mid 1990's. And when price caps were brought in
5 in 1997, we were just on the cusp of a major breakthrough
6 on the local side; convergence between telephone and
7 cable, cellular as well.

8 And at least as importantly, or perhaps
9 more importantly, there's tremendou -- has been in the
10 past two (2) decades, tremendous technological
11 breakthroughs in the telecom industry. And they have
12 created tremendous opportunities for productivity
13 savings, such that the core element of the price cap
14 model, in sharp contrast to the MPI proposal, was that
15 the central trade off for reduced regulation was, in the
16 first years of the model, a 4.5 percent productivity
17 offset, and in 2 -- in 2002, a 3.5 productivity offset.

18 What does that mean? Well it means that
19 if inflation was rising at 2 percent, on an overall
20 basis, consumers were guaranteed a 2.5 percent reduction
21 in rates. I didn't go through the price cap model in any
22 great detail with MPI, because it's quite clear that
23 despite the analogies that it attempted to draw, it was
24 very unfamiliar with it.

25 But I'd ask you for just a minute to look

1 at Roman Numeral II, the second page of the -- of the --
2 of Tab 6 of this -- or the second page of the Executive
3 Summary of the price cap decision. And again, you can
4 refer to it later, but when you look -- look there,
5 you'll see this is what consumers were offered in
6 addition to a 4.5 percent productivity offset.

7 The fourth paragraph, starting with
8 fourth, they were offered quality of service mechanisms
9 which provided a rebate if there was a poor quality of
10 service. Going down another line, they were offer -- the
11 CRTC maintained the authority to pro -- approve and
12 designate service improvement capital plans.

13 And if you go down to the second to the
14 last bullet on that -- on that page, you'll see the
15 tremendous protection provided to Basic residential
16 customers. The -- the sub-basket for residential
17 customers was subject to constraint of inflation, less a
18 prod -- productivity offset. And no specific service
19 could -- could have an increase in a rate element greater
20 than 5 percent a year. Tremendous protection, far
21 superior to the protection offered under the -- the MPI
22 proposal.

23 So when you look at the telecom option,
24 the price cap, the performance based option, guaranteed
25 product op -- off -- offsets in the pockets of consumers,

1 rebates for per quality service, Basic service
2 restrictions on price growth; far superior to that
3 offered by MPI, and still the regulator maintained
4 approval over capital expenditures.

5 And it's just clear that MPI is not
6 comparable in terms of their proposal. First of all it
7 doesn't exist in -- in a competitive world. Consumers
8 don't have the choice of going elsewhere, as made
9 evidently clear by Mr. Oakes this morning.

10 And more importantly, it's clear that
11 there's no productivity offset being offered to consumers
12 by Manitoba Public Insurance. There's no productivity
13 guarantee, for example, assuming that inflation is 2.5
14 percent, that overall rates will decrease by 2 percent.

15 There's no guarantee of an overall rate
16 reduction in exchange for de -- denying consumers a voice
17 in the regulatory process. In fact, MPI indicated that
18 it -- it was not interested in the -- the Public
19 Utilities Board imposing limits on it in terms of capital
20 expenditures or OM&A expenditures.

21 There's no rebates offered under MPI for
22 poor quality service and there's no 3 percent cap -- or
23 excuse me, 5 percent cap. CAC/MSOS doesn't endorse
24 performance-based regulation for MPI, but they do wish to
25 make the point that the price cap regime is a far

1 superior model to consumers compared to what MPI is
2 offering.

3 My clients want to turn for just a few
4 seconds, as well, to natural gas, which as the Board
5 knows, is historically based upon rate base of return.
6 Just again -- and some of these points have been made
7 previously -- when you look at natural gas, you're
8 looking at seven (7) or so major classes plus a couple of
9 interruptibles.

10 You're looking, very importantly, at a
11 quarterly review of the primary gas product, which
12 accounts for about 70 percent of the costs. You're
13 looking in terms of distribution and transfer -- trans --
14 transportation, at Centra being obliged still to justify
15 all its plant expenditures and the Board retaining the
16 authority to disallow capital expenditures from the rate
17 base.

18 By contrast, MPI has thousands of
19 classification sales, they don't have the quarterly
20 review, and the level of scrutiny -- we would
21 respectfully suggest -- is far less intense in terms of
22 capital expenditures.

23 In terms of Hydro, again, just moving
24 quickly to that subject, again, leaving aside diesel,
25 there's certainly less than ten (10) major classes in

1 Manitoba Hydro. And think about what opportunity
2 consumers have in a Manitoba Hydro general rate
3 application. And I understand that we -- we have one (1)
4 coming up quite soon.

5 In a multi-year application they have the
6 opportunity to test the forecast cost for each year.
7 They, in the course of that proceeding, will be aware of
8 the actual rate increases that the Company is proposing
9 for each of those years in that public process and be
10 able to challenge that.

11 They will be able to challenge the
12 Company's allocations of costs and revenues between
13 classes, with regard to each year, in a Manitoba Hydro
14 general rate application.

15 And I think it's safe to say, at least for
16 the -- the time that I've been around, that it would
17 unheard of for Manitoba Hydro to have a 1 percent or 2
18 percent or 3 percent rate increase without a public
19 process involving Intervenors.

20 Even the conditional interim rate
21 increases in 2005, flowing from the PUB's decision in
22 2004, in those proceedings Manitoba Hydro was subject to
23 additional filing requirements.

24 They were subject to consumer-written
25 comments, and those proceedings were tested with

1 consumers having a meaningful involvement. And if you're
2 looking for a reference for that, although the PUB will
3 be aware -- well aware of that, that's in Tab 7 of the
4 CAC/MSOS book of documents.

5 It's been talked about briefly, but I -- I
6 want to turn -- and I'm -- I'm going to summarize on this
7 point in just one second, but I want to turn to the
8 subject of the RSR rebate for a second.

9 As CAA and also CMMG have noted, the RSR
10 rebate is evidence of consumers in the past paying too
11 much. And under the multi-year rate application proposed
12 by MPI it's clear -- and this appears at page 652 to 655
13 to the -- of the transcript -- that in 2010, 2011 the
14 Corporation could have as much as \$36 million too much of
15 consumers' money in its rate stabilization reserve and
16 not be obliged to provide a rebate.

17 \$36 million -- an average rebate of
18 between forty (40) and forty-one dollars (\$41) and no
19 rebate -- and as far as I can tell, no proposal to pay
20 interest to consumers in terms of the rebate that should
21 -- should have been pay -- paid.

22 So, clearly the MPI proposal does not
23 offer the productivity tradeoffs for less regulation
24 offered under the price cap regime. It lacks a
25 transparency and efficiency and the regulatory tools

1 which could be applied to Centra and Hydro.

2 Well is there something else on offer?
3 What if anything else has the Corporation offered in
4 exchange for the denial of a voice to consumer groups?

5 Well, we know that cost savings are
6 minimal and that they're overstated. Even the
7 Corporation admits that the direct savings will be less
8 than seven hundred thousand dollars (\$700,000) and at
9 cross-examination at page 656 of the transcript, we
10 concluded, we confirmed that that would be less than
11 eighty (80) cents per vehicle. And the Corporation also
12 conceded to Mr. Saranchuk under cross-examination that
13 they're probably overstated these cost savings.

14 We also know that the incremental staff
15 reductions are minimal. Two point five (2.5) positions
16 over a employ -- EFT equivalent -- population in the
17 range of fifteen hundred (1,500), fifteen hundred fifty-
18 eight (1,558) for the year 2010/2011 less than two tenths
19 (2/10) of 1 per cent, and the reference for that is page
20 658 of the transcript. And we know that the Corporation
21 doesn't even contemplate the PUB imposing spending limits
22 on OMNA or capital expenditures.

23 So is this a tradeoff consumers would buy?
24 Would consumers be prepared to lose the right to test by
25 interrogatory, cross-examination, and expert evidence a

1 \$20 million revenue requirement raising rates for some
2 classes by 15 percent and raising rates for some
3 classification cells by 20 per cent?

4 Would they be prepared to trade that in
5 exchange for cost savings of eighty cents (\$.80) a
6 vehicle? Would consumers be prepared to lose the right
7 to test the merits of an RSR rebate averaging forty (40)
8 forty-one dollars (\$41) per consumer for eighty cents
9 (\$.80) per -- forty (40) to forty-one dollars (\$41) per
10 vehicle for eighty cents (\$.80) per vehicle?

11 In my clients submission, if you pose this
12 question to consumers, if you told them the company was
13 not proposing OMNA caps, not proposing caps in capital
14 expenditures, but was seeking to shut consumers out of a
15 process that have served them, well, I suspect that the
16 first answer from most consumers would be no, I won't
17 trade away accountability. I won't trade away
18 transparency. I won't trade away my chance for a forty
19 dollar (\$40) rebate per vehicle just to save eighty (80)
20 cents.

21 MPI suggests that the -- the PUB should
22 look at how stable its rates have been and look at how
23 mature its forecasts and rating practices have been as
24 well. But how credible are the MPI claims of rate
25 stability?

1 Ms. McLaren said, under oath at page 605
2 of the transcript, it's entirely plausible by the end of
3 the year or in '08 or in 2010, significant events could
4 compromise our ability to provide rate stability. The
5 MPI position on this point seems quite inconsistent and
6 consumers aren't prepared to trust the Corporation's
7 definition of rate stability. They remember twice in
8 this past decade where MPI has come in seeking and
9 projecting a budget -- a budgeted loss and that's not the
10 kind of rate stability that consumers are prepared to
11 leave in the trust or entrust to MPI.

12 In terms of the maturity of the
13 Corporation's forecast, one has only to look at the PIPP
14 results over the past nine (9) years and I believe those
15 are summarized in CAC/MSOS Exhibit Number 9 to challenge
16 that assertion. And I'll talk about that a bit later
17 when we get to PIPP.

18 Or, look at the variance in claims in --
19 incurred over the past decade, and we went over that
20 discussion at page 844 of the transcript. The smallest
21 variance in terms of claims incurred was way back in
22 2000/ 2001, a \$3 million variance or a 0.2 per cent
23 variance. The biggest absolute dollar variance was quite
24 recent, 2004/'05, a \$48 million variance. So is that
25 sign of a mature forecasting procedure? When it comes to

1 the big stuff, when it comes to PIPP, or claims incurred,
2 there's nothing to suggest that MPI has got the
3 forecasting business sewn up. And I believe Mr. -- Mr.
4 Palmer, was quite candid about that on a number of
5 occasions in this -- in this proceeding.

6 In terms of the rating practices of the
7 Corporation, we would just note the -- the cross-
8 examination of the Corporation by Board counsel.

9 When issues were -- were at least raised
10 in terms of whether the fleet rebate process was
11 actuarially indicated, concerns have been raised about
12 driver premiums, as well as a Bonus/Malus System not
13 being actuarially indicated. So again, there's much to
14 be done in those areas as well.

15 Now, one (1) of the -- the last arguments
16 that MPI has made in this proceeding on -- in terms of
17 the need to reduce its regulatory burden is that it needs
18 less consumer involvement because it needs more time to
19 spend on driver safety rating, on PIPP, and on the
20 service centres.

21 And to be quite frank, CAC/MSOS simply
22 don't accept that argument. And just to explore that
23 subject a little bit, I went over with Ms. McLaren at
24 pages 677 and 678 of the transcript the juggling act that
25 major Crowns such Manitoba Hydro have to go through.

1 or three (3) times larger, in terms of revenues and
2 staff, than MPI. But in the respectful view of CAC/MSOS,
3 given the relative size, it's clear that Hydro is
4 juggling at least as much and probably more than MPI, as
5 MPI's facing challenges such the integration of DVL and
6 its \$50 million Immobilizer Program.

7 CAC/MSOS would also point out that to the
8 extent that MPI has felt time pressure or burden as a
9 result of the regulatory bro -- process, some of this
10 pressure is a function of its own choices. MPI certainly
11 was within its rights to do so, but on -- over how many
12 years have we spent debating the -- the relative virtues
13 of the MCT versus the risk analysis approved by the PUB?

14 How much time have we spent in this
15 proceeding on the multi-year application instead of on
16 other issues such as driver safety or PIPP? Moreover, to
17 the extent that MPI has felt time challenged, why hasn't
18 it sought the advice of others?

19 Why doesn't it look to the example of
20 Manitoba Hydro, which delegates much of its regulatory
21 agenda to it very competent staff below the VP level?
22 When was the last time we saw the CEO of Hydro at a major
23 regulatory proceeding?

24 Why hasn't MPI sought the advice of
25 consumers of Board advisors on a way to make the

1 regulatory process work better? Why don't we talk about
2 ways to make the findings more helpful, more transparent,
3 and perhaps make the process more efficient?

4 Why hasn't MPI used the device of
5 technical hearings, not as a way to avoid public
6 hearings, but as a way to streamline the process?

7 For example, could we not use technolo --
8 technical hearings to address complex background issues
9 such as forecasting without requiring the entire retinue
10 -- retinue of the MPI panel to be there?

11 The bottom line from the perspective of
12 CAC/MSOS is that the current regulatory model has worked
13 well and in the public interest, it has helped the
14 Corporation, it's helped rate -- ratepayers, and it's
15 helped the province.

16 And public participation has been a key
17 part of the current regulatory model. On behalf of
18 CAC/MSOS, we would urge the -- the MPI -- or the PUB
19 Board not to accept this proposal. Specifically CAC/MSOS
20 have three (3) recommendations for the Board.

21 First of all, as you might have guessed by
22 now, they're recommending that the PUB reject the multi-
23 year rate process proposed by MPI and endorse continued
24 consumer participation in the regulatory process on an
25 annual basis.

1 Secondly, while CAC/MSOS are of the firm
2 view that the current regulatory procedures serve the
3 public well, they recommend that MPI be invited to meet
4 with interested parties and board advisors to discuss
5 ways in which the regulatory process can be more
6 transparent, more accessible, and more efficient. Issues
7 to be considered could include minimum filing
8 requirements, what should be deleted, what should be
9 added; for example, from the consumer pro -- perspective
10 can we make the trend analysis more useful?

11 Another issue to be discussed would be the
12 merits of a more focussed technical -- technical
13 conference on key hearing issues in terms of assisting
14 and understanding of the issues and reducing hearing
15 time. A third issue which we think would suggest should
16 be on the agenda is ways in which we can better use the
17 experience of other insurance crowns. And we note that
18 there's a much more data in the public domain as a result
19 of greater regulation of ICBC and the filing by SGI in
20 its -- before its recommender if not regulator this
21 spring.

22 The -- the third recommendation and CA --
23 CAC/MSOS is looking at doing this by itself, but
24 certainly that the Public Utilities Board or MPI consider
25 co-hosting a 'Without Prejudice' forum for regulators,

1 crown monopoly insurers, consumer groups, and other
2 stakeholders on matters of mutual concern in public
3 insurance, investment policy, road safety, auto theft,
4 long term bodily injury claims, and sustainability.

5 In recent months my clients and myself
6 have been in contact with consumer groups in
7 Saskatchewan, in British Columbia. We found there's a
8 lot to learn; that we don't have a monopoly on wisdom and
9 it's -- it's an idea that we've been thinking whose time
10 has come.

11 Mr. Chairman, I'm moving on to the subject
12 of operating and administrative costs. Ms. Everard and
13 Mr. Oakes stole some of my thun -- thunder on these
14 points, but I will summarize a little bit of this.
15 Certainly Ms. Everard noted in -- in her opening state --
16 statement a trend of increases in operating expenses in
17 the projection and forecast years and also in past years
18 a significant growth in staffing littles -- levels with
19 the figure she cited being support staff growing by some
20 65 percent.

21 Now before turning to the kind of a high
22 level analysis of the question of operating and
23 administrative costs, it might be helpful to remind
24 ourselves that it's the Corporation which bears the onus,
25 in terms of establishing the reasonableness and prudence

1 of its expenditures. It is the Corporation that must
2 satisfy the Board that its forecast future costs are
3 reasonable.

4 And so before addressing aspects of the
5 Corporation's application including PIPP, road safety,
6 and express cross subsidies that are readily apparent,
7 CAC/MSOS believe it might be helpful to take a step back
8 and look at the big picture, because it is the contention
9 of CAC/MSOS that when we look at the recent cost
10 experience of MPI, when we look at its forecasts and
11 projections, when we compare its experience to that of
12 other industry players including Centra Gas and SGI --
13 other regulated entities, excuse me, and perhaps most
14 importantly, when we look at the corporate attitude as --
15 as expressed during cross-examination, ast a high level
16 on a prima facie basis, it is not clear that the
17 Corporation has established the reasonableness of its
18 rate application.

19 And perhaps the starting point of our
20 discussion, we should turn back to the discussion that
21 the Chairman had with MPI at page 703 of the transcript
22 with regard to P -- with regard to Exhibit Number 16, I
23 believe it's a MPI exhibit which shows the, but it may be
24 a PUB exper -- exhibit, excuse me, which shows the growth
25 of staff under PIPP.

1 And in discussing this table at page 703,
2 the Chairman suggested, and the suggestion was not
3 refuted by MPI, that between 1994 and 2007, MPI had seen
4 a rise in support staff of about 65 percent and of claims
5 personnel of about 30 percent. In fairness, MPI, while
6 admitting it had not done any sort of detailed analysis
7 about the growth of staff, did note the increasing
8 complexity of the world it operated in as a partial
9 rationale, a partial explanation, for this relatively
10 rapid growth.

11 But certainly MPI does not exist on an
12 island. There are other public insurers like SGI and
13 they are -- would surely be subject to many of the same
14 cost pressures.

15 And that's where the Corporation's
16 response to PUB Pre-Ask Number 4, which performs a trend
17 analysis for MPI excluding DVL, becomes so interesting
18 because when you turn to chart 7 of that analysis, when
19 you look at the index with regard to total costs, and
20 that's at page 744 of the transcript, one sees a sharp
21 divergence between the fairly comparable index of total
22 cost between SGI and MPI in 2000, and that was conceded
23 by Mr. Kramer at page 744, and a quite significant
24 difference as conceded or acknowledged by Mr. Kramer in
25 2007.

1 The numbers in terms of the ratio were
2 fairly close in 2000, but a sharp dis -- divergence in
3 the last seven (7) years. Now, the Corporation's stock
4 answer to that sort of Crown to Crown comparison, and
5 we're going to miss him, was given by Mr. Galenzoski.

6 When he spoke with Ms. Everard on
7 Thursday, of October the 4th, he argued that the indice
8 only showed relative changes, not an absolute value, and
9 he also argued that while Crowns are most comparable,
10 they are not easily comparable. And CAC/MSOS are
11 prepared to concede that any such comparison was probably
12 pretty problematic back in the late 1990s, especially
13 before ICBC became much more heavily regulated.

14 But as Mr. Galenzoski conceded at page 733
15 of the transcript, there's a much greater information on
16 the public record than there has been in the past with
17 regard to Crown corporations like ICBC and -- and SGI.

18 So we decided through the device of
19 CAC/MSOS Exhibit Number 6, which was that comparison of
20 administrative costs per vehicle, per insured vehicle
21 between MPI and SGI, we decided to address what appeared
22 to be the other major concern of Mr. Galenzoski in terms
23 of the trend analysis; the -- the fact that it only
24 showed changes in -- relative changes, rather than
25 absolute values.

1 And when you look at the front page of
2 CAC/MSOS Exhibit Number 6, if you look at the SGI measure
3 of total administrative costs per vehicle, which is the
4 device that MPI uses in its claim forecast books, you see
5 a significant gap between SGI and MPI in 2005, and an
6 even wider one (1) partially explained by the immobilizer
7 Program in 2006.

8 And just for those who don't have that
9 table in front of them, the administrative cost per
10 vehicle insured for SGI is calculated by CAC/MSOS were
11 ninety-eight dollars (\$98) in the 2005 year, as compared
12 to a range between a hundred and sixteen (116) and a
13 hundred and twenty dollars (\$120) per insured vehicle as
14 calculated for MPI, and the next year, so that -- about a
15 twenty-two dollar (\$22) difference at the maximum. The
16 next year the maximum difference was about twenty-eight
17 dollars (\$28) per insured vehicle.

18 MR. KEVIN MCCULLOCH: Excuse me, Mr.
19 Chairman, I don't want to interrupt Mr. Williams, but he
20 referred to an exhibit number that I can't seem to
21 coordinate. My --

22 MR. BYRON WILLIAMS: I misspoke, Mr.
23 McCulloch, it should be CAC/MSOS ex -- Exhibit Number 8.

24 MR. KEVIN MCCULLOCH: Thank you.

25 MR. BYRON WILLIAMS: And feel free to

1 interrupt when I misspeak in that way. And I apologise
2 for that, Mr. Chairman.

3 Now, when we looked at that comparison in
4 CAC/MSOS Exhibit Number 8, Mr. Galenzoski was only too
5 happy to point out that part of the gap between SGI and
6 MPI could be explained by the relatively higher
7 commission paid by MPI.

8 Mr. Chairman, just if you're looking, it's
9 not found in the green book. It's a separate exhibit.
10 You have it, okay. As I was saying, part of the
11 explanation does lay in the higher premiums -- excuse me,
12 the higher commissions paid by MPI than SGI, but of
13 course, that argument cuts both ways because the premium
14 tax in Saskatchewan is much higher than in Manitoba.

15 And as Mr. Galenzoski candidly admitted at
16 page 741 of the transcript. He said:

17 "I could give you the number, i.e., for
18 the premium pr -- tax, but it would
19 make it look too good for you."

20 But he was generous enough to give that
21 number for the premium tax in 2006 and showed that the
22 figure for SGI at thr -- a bit over thirty dollars (\$30)
23 per unit was significantly higher than the figure for MPI
24 at only eighteen dollars (\$18) a unit.

25 So, yes, there are numbers that go both

1 ways in terms of that comparison. But I would invite the
2 Board to take the 2005 numbers of SGI -- pre big
3 expenditures on immobilizers by MPI -- insert the
4 2005/'06 MPI numbers for commissions and for premium
5 taxes, and you will still get a clear indication that SGI
6 costs per vehicle insured are significantly lower than
7 those of MPI.

8 And play around a little bit with those
9 numbers, and play around with the vehicle numbers if you
10 must, and you'll get an indication that tends to work in
11 the SGI favour.

12 Again, this is just a benchmark, another
13 cause for concern along with substantial long-term growth
14 in staff and a relatively higher growth in total costs.

15 But this Application is about the future
16 costs of MPI. What do we know about the future costs of
17 MPI? And again, Ms. Everard talked about a litt -- this
18 to at least some degree this morning.

19 We know that inflation is about --
20 projected to be about 2.5 percent. We also know, based
21 upon page 747 and 748 of the transcript, that operating
22 expenses are projected to grow in the range of 6 percent
23 annually from 38.629 million in '06/'07 to in excess of
24 51 million in 2011/2012. And MPI can -- can confirm that
25 6 percent was accurate at pages 747 and 748 of the

1 transcript.

2 We know that compensation costs are rising
3 faster than inflation, and you can look to pages 749 to
4 750 of the transcript for evidence of that.

5 In the -- in the '07/'08 year throughout -
6 - out to '08/'09 a 4.16 percent growth, a 3.98 percent
7 growth the next year. Again, a 4. -- percent growth the
8 next year and a 4.3 percent growth projected between
9 2010/2011 and 2011/2012.

10 We also know that in contrast to the
11 projection for capital expenditures, the overall capital
12 expenditure, not just Basic, but as Mr. Galenzoski
13 pointed out, the overall capital expenditures for
14 2007/'08 are projected to grow quite rapidly.

15 They were forecast -- or projected last
16 year to be about \$15.76 million. They're now forecast to
17 be 28.7 million, as the Corporation confirmed at pages
18 750 and 751 of the transcript, an 84.5 percent increase.
19 And this has been touched upon briefly.

20 I would just confirm, as well, that we
21 know -- and this is confirmed at page sev -- 847 of the
22 transcript -- that forecast capital expenditures have
23 been higher than actuals for every year between 2002/'03
24 and 2006/'07.

25 And at pages 848 and 849 of the

1 transcript, for those same years we've confirmed that the
2 projected cumulative amortization has exceeded the actual
3 accumulative amortization over this period.

4 So there you have it, perhaps not
5 succinctly, but at a high level. You have past trends
6 that show signs of cause for concern, you have
7 unfavourable comparisons with SGI, and you have unfair --
8 unfavourable future forecast as compared to inflation,
9 all raising -- which raises doubts about the
10 reasonableness and necessity of the forecast future costs
11 of MPI.

12 Last point I want to make before moving to
13 my recommendations in this area is to make reference to
14 the Corporation's attitude in terms of this issues as --
15 as expressed at pages 736 to 738 of the transcript.

16 And I guess before moving there, I just
17 want to talk very briefly about the value that a measure
18 that operating, maintenance and administrative costs per
19 unit can offer to regulators. And perhaps the best
20 example of that is in the CAC/MSOS book of documents.

21 There's an excerpt from a Centr -- Centra
22 Gas proceeding at Tab 5. This -- the book 3, the green
23 book, and it's page 28 of that document, there's a
24 summary of how Centra uses the measure -- and that's at
25 page 28, at Tab 5 of -- and it's PUB Decision 9907.

1 But there's a summary of how Centra Gas
2 uses the measure of OM&A per customer. And Centra
3 measures itself with this -- using this tool. It looks
4 at its growth in terms of OM&A per customer between 1998
5 to forecast 2008/'09 and finds an increase of 5 percent
6 over ten (10) years.

7 On a constant dollar basis, it finds a
8 substantial decline. And it concludes that there's a
9 productivity-related cost reduction embedded in their
10 costs -- in these costs.

11 In the respectful view of CAC/MSOS, this
12 single page offers insight into how such a simple measure
13 -- OM&A per unit -- can be used to monitor the
14 Corporation against itself, to see how the Corporation is
15 performing in terms of cost growth as compared to
16 inflation.

17 In the respectful view of CAC/MSOS, this
18 is a useful tool that offers important insight both as a
19 measure against oneself and as a measure against others.
20 Now of course, Ms. McLaren disagrees with me, and she
21 does so at pages 736 and 737 of the transcript.

22 And I suggested to her that using a
23 benchmark such as this, OM&A per unit, had -- had some
24 potential to benefit the Corporation in terms of using
25 this as an internal measure for your own Corporation.

1 And at page 736 she was not prepared to
2 say the Corporation does see value in using these
3 measures as internal targets or goals.

4 At page 737 I came to the conclusion that
5 she must have misunderstood me, so I again suggested that
6 there's some value in using these measures internally
7 over time to measure how the Corporation is doing in
8 terms of cost growth.

9 Ms. McLaren again disagreed with me at
10 page 737 indicating, "But I'm not sure there's much value
11 in anything other than the way we use it today."

12 I'd invite the Board to read carefully
13 that discussion at pages 736 to 738 of the transcript.
14 You see, in our respectful view, an absolute
15 disinclination by the Corporation to use what is standard
16 practice in the regulation of other utilities -- the
17 measuring unit of OM&A per customer.

18 CAC/MSOS do agree with Ms. McLaren, Mr.
19 Galenzoski, and Mr. Palmer that it's important to compare
20 rates between utilities. They also believe it's
21 important to look at quality of service indicat --
22 quality of service indicators.

23 Where they disagree is on the importance
24 of using key trends, such as claims per claims personnel,
25 policies or supports, or administrative costs per

1 vehicle.

2 And in the respectful view of CAC/MSOS,
3 while MPI customers demand high quality, affordable
4 service, they also have a right to know that the -- the
5 Corporation is being best -- well managed in terms of the
6 efficiency, because every dollar wasted is a dollar less
7 in consumers' pockets.

8 With this in mind, CAC/MSOS make the
9 following recommendations in terms of administrative
10 costs. First of all is that the Public Utilities Board
11 express concern with cost growth at or above the rate of
12 inflation.

13 Secondly, that MPI be directed to file
14 annual comparisons of administrative costs per claim,
15 operating costs per policy, and total administrative
16 costs per vehicle, including comparisons with ICBC, SGI
17 and a variance explanation.

18 CAC/MSOS would note that MPI offers within
19 its trend analysis operating cost per policy and total
20 admis -- and admin costs per claim, but to their
21 knowledge they don't do an express comparison with ICBC
22 and SGI.

23 And they also note that the total admin
24 cost per vehicle is in the claims forecast book, but it's
25 not -- there's not an express comparison with other

1 utilities.

2 CAC/MSOS would also recommend that the PUB
3 reduce the approved capital forecast in recognition of a
4 past practice of excess padding, excess cushioning, and -
5 - within capital costs.

6 Mr. Chairman, I'm -- I'm moving to the
7 subject of PIPP. If I might stand down for just two
8 minutes and just catch my breath for a second?

9 THE CHAIRPERSON: Okay, we'll take a five
10 minute break.

11

12 --- Upon recessing at 1:32 p.m.

13 --- Upon resuming at 1:40 p.m.

14

15 THE CHAIRPERSON: Okay, Mr, Williams...?

16 MR. BYRON WILLIAMS: Thank you. Into the
17 subject of PIPP, and I was struck by a discussion between
18 the -- the Chair and Ms. McLaren at page 895 of the
19 transcript, and the suggestion was made to MPI that, with
20 respect to the administration of PIPP, they had owed a
21 duty to do its best for its clients, but that it also was
22 a duty not to expend benefits any longer than necessary.

23 And it was argued that it -- that was both
24 for the benefit of claimants and for the benefit of
25 policy holders and premium levels.

1 And in the respectful view of CAC/MSOS,
2 this discussion captured the essential elements of the
3 costs of service model. MPI is to provide quality and
4 appropriate services such as PIPP, charging no more and
5 no less than a suf -- efficient service provider of PIPP
6 would provide.

7 And in reviewing the past three (3) Board
8 Orders relating to PIPP -- and those are found, and Mr.
9 McCulloch will correct me if I have my PUB -- my exhibit
10 reference wrong, in CAC/MSOS Exhibit Number 9 -- it
11 struck me as readily apparent from an -- in reviewing
12 these Board Orders, that the Board has had some
13 discomfort with the question of whether MPI has met its
14 onus of establishing that the premiums related to PIPP
15 are no higher and no lower than the effective and fair
16 treatment a management should provide.

17 And Mr. Dawson spoke at length about Board
18 Order 148/04, as well as Board Order 155/05, so I'll --
19 I'll skip my planned commentary on those Board Orders.

20 But I do want to draw the -- the Board's
21 attention to some of the discussion which appears with
22 regard to Board Order 156/06 under the summary of
23 findings at page 38 and 39. And this is at the third-
24 last page of the exhibit, about a third of the way down
25 the page:

1 "The Board finds benchmarks for PIPP
2 are important and are strongly
3 supported by the Board as means of
4 better assuring value for money, cost
5 effectiveness, and good customer
6 service."

7 Going on to the next page, on the second -
8 - second paragraph, there's a reference to the Barrons
9 Report at pages 68 and 69. And at the end of that
10 paragraph the Board goes:

11 "While the Barron Report provides a
12 degree of comfort, benchmarks and
13 analysis to guide PIPP management are
14 still necessary."

15 And then drawing your attention to the
16 bottom of this page, and these -- these are some critical
17 paragraphs, and these are excerpts from the Decision at
18 pages 79 and 80:

19 "Each year MPI expends over \$200
20 million in direct PIPP claimants. With
21 IBNR and PFAD provisions, PIPP
22 represents the largest component [et
23 cetera], of MPI's unpaid claims
24 liability. PIPP accounts for the
25 largest share of the indicated premium

1 rate for vehicles each year. Overall
2 MPI expends or provides to expend in
3 the future over \$600 million. This is
4 a considerable amount of money, money
5 with a common origin, the premium of
6 policy holders.
7 For many reasons MPI should develop the
8 benchmarks called for in those Orders.
9 Without benchmarks it is difficult to
10 be fully assured that MPI is handling
11 and managing claims in an effective
12 fashion, that MPI's general operations
13 are as reasonably cost-effective as
14 they should be and as comparable as
15 possible with the best experience found
16 in other jurisdictions.
17 Without that assurance, there will
18 always be an element of doubt as to
19 whether the current premium levels are
20 higher or lower than effective and fair
21 treatment a management should provide."

22 In the respectful view of CAC/MSOS, the
23 doubt expressed by the Board in previous decisions, in
24 particular the most -- its most recent decision, have
25 only been given further weight, further credence in this

1 proceeding.

2 In particular they've been given further
3 credence by concerning trends in terms of PIPP and
4 further credence by the Corporation's failure, after
5 twelve (12) or (13) years of experience with the program,
6 to implement Basic tools of program management and
7 analysis.

8 And they've been given further credence by
9 the Corporation's excessive delay and by the failure of
10 the Corporation to respond to the Board's findings,
11 recommendations, and as Mr. Dawson pointed out, its
12 orders.

13 Our clients see concerning trends in PIPP
14 since 2001. And these are documented in PUB Exhibit
15 Number 14, and there's a discussion regarding this at
16 pages 592 to 597 of the transcript.

17 Of course, one (1) concern relates to the
18 rapid grown in whiplash crane -- claims. Now that growth
19 is perhaps somewhat overstated through the use of change
20 in reporting, but it's quite clear that it's there. And
21 it's reflected more importantly by the relatively high
22 levels of serious claims, including fatalities.

23 My clients are also concerned by the
24 enduring high varia -- high variability between forecasts
25 -- between projections, forecasts, and actuals within

1 PIPP, suggesting that the Corporation still does not have
2 a strong handle on its experience. And again, the best
3 example of that is set out starkly in CAC/MSOS Exhibit
4 Number 9.

5 And those forecasts go either way. We see
6 a \$42 million positive variance in 2003/'04 and you see
7 the very next year a negative variance of 51.865 million
8 -- variances as large as 22 percent positive, 25 percent
9 negative in recent years.

10 My clients also note with grave concern
11 the Corporation's failure, thirteen (13) years in the
12 PIPP, to equip itself with fundamental and Basic tools
13 for program analysis and management, such as the ICD-9
14 code, which MPI is now tentatively exploring.

15 Another such tool that comes to mind are
16 the Official Disability Guidelines employed by ICBC and
17 rapidly rolled out in the last two (2) years in response
18 to their bodily injury crisis.

19 With regard to the ICD-9 codes, CAC/MSOS
20 note that there does not appear to be any dispute that
21 employing these codes will assist the Corporation. At
22 pages 856 of the transcript, Ms. McLaren says,

23 "It's important to move to such a
24 system of categorization."

25 At page -- later on in that same

1 discussion she says that

2 "the -- the Corporation's expectation
3 in terms of these codes..."

4 and this is a couple of pages further on in the
5 transcript,

6 "...would be that it would inform
7 understanding as to the likely
8 evolution of certain kinds of injuries
9 and may in fact improve our ability to
10 work with the claimants to have better
11 outcomes."

12 But when asked about the status of the
13 ICD-9 codes within the Corporation, when asked whether
14 case managers today are presumably employing these codes,
15 the Corporation's honest answer, at pages 857 and 858,
16 was:

17 "I'm honestly not sure of the extent to
18 which that may be happening today from
19 an operational perspective. It's not
20 something that is institutionalized
21 within the management of the PIPP
22 Program in any way, shape, or form."

23 A key tool acknowledged by all to be
24 important, thirteen (13) years into the program, not
25 institutionalized.

1 We provided, for the assistance of CA --
2 of MPI and -- and the -- those parties in the room also
3 an excerpt from a BCUC proceeding go -- discussing the
4 criteria of the Official Disability Guidelines that ICBC
5 is so rapidly rone -- rolled out over the last two (2)
6 years.

7 And MPI concern -- confirmed during cross-
8 examination -- and these are my words, not theirs, but
9 this is the conclusion I draw from that cross-examination
10 -- that the objectives of the ODG are strikingly similar
11 to those purportedly being advanced by MPI.

12 At page 861 we talked about what the ODG
13 can do. And we're not suggesting this particular
14 mechanism, but we're saying that there -- the objectives
15 are strikingly similar. Page 861:

16 "They provide information about
17 disability duration norms from actual
18 experience data."

19 At page 862:

20 "They han -- enhance a timely and
21 appropriate return to work."

22 At page 862 and 863:

23 "They can be used for benchmarking
24 against national norms."

25 At page 863:

1 "They give insight into procedure
2 disability durations within the
3 diagnosis.

4 Yet MPI admits, at page 865, that it's had
5 no discussion with ICBC about the rollout of the ODG.
6 How has it worked? How are case managers and medical
7 practitioners responding to it? Is this an experience
8 that MPI can learn from?

9 One would have expected that a Corporation
10 with a \$200 million program on an annual basis; a
11 Corporation dedicated to the balance between service and
12 efficiency, would have made some inquiries about this
13 important initiative in British Columbia.

14 And Mr. Dawson spoke of this next point at
15 length, so I'll try not to -- to the same degree, but
16 from the perspective of CAC/MSOS, perhaps what was most
17 striking about the PIPP discussions in this proceeding
18 was not necessarily the delay in the ongoing PIPP
19 Architecture Plan, but what was most striking is what the
20 Corporation has not done over the past three (3) or four
21 (4) years.

22 As confirmed at page 896, it has not
23 performed a comparison of PIPP with other no-fault
24 jurisdictions. Indeed, it has not started to collect and
25 report on our data or the data from other no-fault

1 insurers to compare the results. That's at page 897.

2 As confirmed at page 870, it has not
3 retained an external disability management specialist to
4 review the handling of long-term claims. There's no
5 mercenaries in the picture.

6 And, it's confirmed at page 867, it has
7 not undertaken the unruly paper project promised by Mr.
8 Bedard back in 2004. That project just has not happened.

9 So what we have in terms of PIPP is delay,
10 the failure to incorporate important architecture,
11 important management tools, and we also have the prom --
12 promise from the Corporation -- and this is at page 880
13 of the transcript -- that there will be no benefit from
14 the PIPP review until beyond 210/211.

15 And my clients are certainly concerned
16 about the failure to respond to past Board Orders as well
17 as recommendations, as well as the apparent lack of
18 urgency that the Corporation has displayed on this
19 project.

20 And I think the -- the language Ms.
21 McLaren used -- and I -- I'm going off of memory -- was
22 something to the effect of well there's nothing burning.
23 There may not be anything burning, but this is something
24 of incredible importance to ratepayers, to -- to
25 claimants, and it's something that thirteen (13) years

1 into the program we would expect the Corporation to be in
2 a different situation.

3 A last point, Mr. Chairman, and it's a --
4 a small one, and you don't need to turn to it now. But
5 at your leisure, I'd suggest that the Chairman and
6 members of the Board turn to CAC/MSOS Exhibit Number 12
7 which is an excerpt from the BC Public U -- UC
8 proceedings into ICBC or Public Insurance in -- in
9 British Columbia.

10 And buried at the back of that Exhibit --
11 Attachment E -- is a report prepared by ICBC in terms of
12 bodily injury claims review initiatives. And it's a
13 eight (8) or nine (9) page report that looks on the --
14 the task that's been assigned to the Corporation, the
15 result or outcome, and the completion or anticipated
16 completion date. And it's a report that we'd recommend
17 to the Boards consideration because, in the respectful
18 view of CAC/MSOS, this is how reporting should be done to
19 a Board of Directors or to a regulator.

20 The information should not have to be
21 drawn from the Corporation incrementally through the
22 proceeding. This is a tremendous example of how to set
23 out what the tasks are, what the results or outcomes are,
24 and the completed or anticipated completion date. And
25 it's a reporting tool that we'd recommend to MPI for

1 their conclusion -- or for their consideration.

2 One final comment before moving to -- to
3 the recommendations of CAC/MSOS in this area relates to
4 the IBM report. CAC/MSOS in -- in an honest effort to
5 assist MPI in making their case in this area requested
6 that report. There was a subsequent request for a
7 redacted report; MPI has declined to -- to do so.

8 We think this report would have been
9 helpful in understanding, in a more fulsome way, how the
10 Corporation is approaching the PIPP issue. We think it
11 would have added to the insight of Intervenors and of the
12 Board. Ultimately, in the respectful view of CAC/MSOS,
13 if the regulator was expressing doubts as to whether the
14 current premium levels are higher or -- or lower than
15 efficient and fair treatment and management should
16 provide in 2006, in the view of my clients, these doubts
17 could only have been exacerbated by these proceedings.

18 Accordingly, in terms of the
19 recommendations, CAC would recommend, first of all, that
20 the PUB expressly find that MPI has not met its onus of
21 establishing that the costs incurred in the delivery of
22 no-fault benefits, both claims incurred and claims costs,
23 are reasonably and prudently incurred.

24 Secondly, that MPI be directed to file the
25 IBM report in its entirety with the PUB and a redacted

1 version, in terms of future possible contracts with
2 interested parties prior to at the time of its next Rate
3 Application.

4 Third -- and I think CAC/MSOS have been
5 asking for this since 2004 -- that PIPP -- that PIPP MPI
6 prepare and file an independent external review of PIPP
7 management of long-term claims by an expert firm such as
8 Mer -- Mercer's offering a critical analysis of the
9 strengths and weaknesses of the current claims handling
10 process.

11 And fourth, that MPI be directed to file,
12 in a format similar to that found in the excerpt from IC
13 -- CB --- ICBC report found at CAC/MSOS Number 12, an
14 update of the PIPP Architecture Project including core
15 elements, timetables, deliverables, and costs along with
16 the 2009/2020 Rate Application.

17 In terms of road safety, Mr. Chairman,
18 we're -- we're turning there now. The Board will be
19 aware that this is a matter of longstanding concern to my
20 clients. Usually we lead off hearings with cross-
21 examination of road safety. We didn't in this Hearing,
22 but it's not to suggest that it's of any less importance
23 in this proceeding.

24 And it's important, not just because it's
25 a key pocketbook issue for my clients; more fundamentally

1 they see accident prevention road safety programming by
2 MPI as a key vehicle to mitigate the tragic social and
3 economic costs of fatalities and serious injuries.

4 My clients recognize that on issues such
5 as road safety and loss prevention, MPI does not offer
6 the entire solution. It cannot offer one-stop shopping.
7 However, CAC/MSOS were of the firm view that MPI is in
8 the position to be the preemin -- preeminent player in
9 road safety and accident prevention.

10 Given a bus -- in circum -- given that a
11 business case can be -- often be made for prudent road
12 safety expenditures. I have to say, leaving last year
13 proceedings, my clients felt some encouragement. They
14 were pleased to see MPI making some progress in terms of
15 developing costing metrics relating to impaired driving,
16 occupant restraint, and unsafe speed.

17 They were pleased to see the request of
18 the Public Utilities Board for an independent review of
19 accident prevention. And, while they may have quibbled
20 over the forecast with regard to the IIP, they're also
21 pleased to see what they consider to be an attitudinal
22 change by MPI with the Corporation exhibiting an
23 increased willingness to go beyond its traditional
24 educational role where a business case could be made.

25 However, in the respectful view of

1 CAC/MSOS, the current road safety and loss prevention
2 environment, with the exception of auto theft, is more
3 bleak in terms of this year's proceeding than last
4 year's. In part, my clients have come to that conclusion
5 because they have better information about the tragic
6 social and economic consequences of imprudent behaviour
7 such as not wearing a seatbelt and other -- and impaired
8 driving.

9 In part, they consider the situation more
10 bleak because of the failure by MPI to use critical tools
11 in its progr -- in its possession in terms of program
12 evaluation and resource allocation. And it's a more
13 bleak picture in their view, in part, because of the
14 Corporation's apparent unwillingness to invest in key
15 areas of loss prevention, road safety, such as impaired
16 driving and occupant restraint.

17 Just dealing with the first point, which
18 is the tragic social and economic costs of impaired
19 driving. And this hear -- excuse me, the tragic social
20 and economic costs of imprudent behaviour of vehicle
21 occupants.

22 In this hearing -- and we found this out
23 at page 786 to 787 of the transcript -- we learned that
24 for the period between 2000 and 2005, in terms of
25 fatalities associated with unbelted vehicle occupants,

1 the proportion of fatality injured occupants, not belted
2 in passenger cars and vans, was 55 percent. And in light
3 trucks, SUV's and vans, was 71 percent.

4 We heard -- and we thank the Corporation
5 for its prompt response for this inf -- to this request -
6 - that in 2006 -- and this appears at page 715 of the
7 transcript -- forty-one (41) of the ninety-six (96)
8 fatalities, excluding motorcyclists, pedestrians and cycl
9 -- cyclists, involved situations where occupant
10 restraints were not used.

11 Forty-one (41) unbelted fatalities, or
12 about 42 percent of the -- the total. And thirty-seven
13 (37) of those 41; those individuals who died, who in many
14 cases need not have died, died in rural Manitoba. And
15 that's at page 1054 of the transcript.

16 We also found out -- and this is confirmed
17 at page 808 of the transcript -- that Manitoba is
18 currently, in the most recent survey, below the Canadian
19 average in terms of rural seatbelt use.

20 So, clearly, here's an is -- the issue of
21 occupant restraint is more pronounced in rural Manitoba;
22 certainly in terms of comparison to elsewhere in Canada,
23 and in terms of the tragic costs and consequences.

24 We also learned -- and this is confirmed
25 at page 785 of the transcript -- that the estimated total

1 costs of unbelted occupants in vehicles, to MPI, is in
2 the range of \$23 million dollars. And that the average
3 cost for an unbelted occupant in terms of an accident is
4 about -- between three (3) and four (4) times as high as
5 for an occupant who is belted.

6 In terms of impaired driving -- and I
7 won't spend as much on this information because it was
8 before the Board previously -- at page 781 we learned
9 that there's twelve (12) fatalities, on average, a year
10 in the years between 2000 and 2002.

11 And there's a terrible economic toll;
12 between \$30 and \$35 million dollars disproportionately in
13 the area of bodily injury. And that's confirmed at pages
14 779 and 782 of the transcript.

15 And we know, as well, from page 813 of the
16 transcript, that Manitoba is still above the national
17 average in terms of fatalities, per billion kilometre
18 travelled, and injuries.

19 So that's the cost; the consequences.
20 What's caused my clients concern with regards to this
21 Proceeding in particular is the failure by the
22 Corporation to use key tools for the purposes for which
23 they're intended.

24 And I draw your attention to last year's
25 Board Order by the Public Utilities Board, which is at

1 Tab 10 of CAC/MSOS Exhibit No. 3. That's an excerpt from
2 Board Order 156/06.

3 And, at page 74 of that decision, the
4 Public Utilities Board was speaking about the fact that
5 MPI has developed an estimate of the annual claims cost
6 associated with impaired driving and -- but is -- and is
7 developing similar estimates for speeding and lack of use
8 of restraints.

9 The Board finds by developing such cost
10 estimates, MPI will be able to establish benchmarks to
11 compare against experience as it amends its programs,
12 including new opportunities now available through its
13 assumption of DBL.

14 MPI should move ahead with such analysis
15 as they are likely to prove useful in future amendments
16 to its road safety program -- programming. And, again,
17 at page 85, there was also a recommendation to do an
18 independent review of the current accident prevention
19 programs.

20 And we found out over the past couple of
21 years that MPI has performed two (2) such studies; a 2004
22 study in terms of impaired driving, a 2006 study in terms
23 of occupant restraint. But in the court -- and we also
24 found when we looked at the impaired driving study, that
25 the people preparing that study were saying, This is what

1 you can use it for. Develop an economic measure, a
2 baseline for evaluation of programming.

3 Use it in the allocation of counter
4 measurement -- of countermeasure resources. But in the
5 course of the -- our discussion during this Hearing, we
6 found that MPI is not using these metrics -- these
7 measures -- for program evaluation. That's at page 789
8 and 790 of the transcript.

9 And it's not currently using these
10 measures for resource allocation. The question posed to
11 the Corporation at page 791 was: Do the impaired driving
12 and occupant restraint studies play a role in allocating
13 resources? And at page 79 -- 791 the answer was: They
14 have not yet.

15 And when one looks at the Corporation's
16 response on this point -- and this begins at page 792 of
17 the transcript -- you can see that, in terms of using
18 these important tools, there's not much immediate
19 prospect in terms of the Corporation planning to use
20 them.

21 There was talk about really needing
22 significant integration and alignment, and we need a
23 better understanding of this works with -- with other --
24 other matters and that the results were much too
25 preliminary.

1 And my clients found, to their horror,
2 that not until the completion of the second iteration of
3 these studies -- somewhere between 208 and 213 -- does
4 the Corporation really plan to -- to use them or even,
5 excuse me, I've -- I've miss spoke here.

6 There was no promise by the Corporation
7 that it would use them for -- for tools as Basic as
8 resource allocation. And the message my clients took
9 from this is that not until 2013, or so, did the
10 Corporation really intend to do so. Now if we've
11 misunderstood the Corporation, we'd be happy to be
12 corrected.

13 My clients were also disappointed to know
14 -- and that's at page 795 of the transcript -- that
15 there's been no independent review of the current
16 accident prevention program. Of particular concern to my
17 clients has been what they consider to be the minimal res
18 -- response by the Corporation to critical social
19 problems such as the failure to use occupant restraint
20 and impaired driving.

21 Think of occupant restraint, the \$23
22 million problem, forty-one (41) fatalities in 2006
23 associated with unbelted vehicle occupants. The
24 Corporation's support in terms of initiatives in this
25 area are quite modest. Between 2004 and '05 and 2011 and

1 '12 the annual budget ranges between one hundred and
2 ninety-one thousand (191,000) and three hundred and forty
3 thousand (340,000).

4 Think of impaired driving, the thirty (30)
5 to \$35 million problem, a figure quite comparable in
6 terms of direct costs to auto theft -- the twelve (12)
7 fatalities per year.

8 And what are the Corporation's projected
9 expenditures -- actual and projected -- between 2004/'05
10 and ranging out to 2011/2012? Somewhere between three
11 hundred and seventy thousand (370,000) and four hundred
12 and sixty thousand (460,000), and that's at page 798 of
13 the transcript.

14 And my clients also found -- and this is
15 at page 804 and 805 of the transcript -- that
16 expenditures in impaired driving and occupant restraint
17 were actually less than forecast in '06/'07. Now, in
18 fairness, the Corporation has indicated that it plans to
19 increase its com -- commitment to the Road Watch Program
20 in -- in the current year, although that figure will be
21 at a range of less than one hundred thousand dollars
22 (\$100,000).

23 The -- the final concern my clients wish
24 to express in this area is an inconsistency they see in
25 the position taken by the Corporation in terms of loss

1 prevention and road safety. And this appears at page 789
2 of the transcript.

3 MPI is engaged in education awareness.
4 MPI is not in the engineering business. We're not in the
5 enforcement business. Well, with respect, my clients beg
6 to differ.

7 Look at the annual spending; spending in
8 excess of \$12 billion -- it's 12 billion, excuse me -- in
9 excess of \$12 million related to the installation of
10 forty thousand (40,000) immobilizers annually.

11 Look at the over eight hundred thousand
12 dollars (\$800,000) devoted to prosecution,
13 fingerprinting, and associated activities in terms of
14 auto theft.

15 Look at the seven hundred thousand dollars
16 (\$700,000), approximately, associated with WATSS, W-A-T-
17 S-S. MPI is spending millions annually on loss
18 prevention programs, funding engineering or solutions for
19 vehicles, funding probation services, funding finger --
20 fingerprint teams, funding Crown prosecutors.

21 When we look at the -- the current loss
22 prevention road safety budget, my clients would suggest
23 that well over one half (1/2) of those expenditures are
24 not related to education and awareness. MPI has crossed
25 the road safety rubicon over the last couple years.

1 Given this reality, given the massive social and
2 economical costs, my clients have to ask why such a
3 frail, why such a passive, why such an unambitious
4 response to pressing social issues such as occupant
5 restraint and impaired driving?

6 How do we reconcile pain so much for an
7 important issue, which is auto theft, and committing so
8 little for impaired driving or occupant restraint. Not
9 to say that auto theft is not a critical issue, and it's
10 certainly merited an aggressive response to a program
11 such as WATSS. But clearly impaired driving, occupant
12 restraint, should be higher priorities in the ker --
13 Corporation is currently demonstrating in its current and
14 projected expenditures on road safety.

15 Not in an imprudent fashion; not
16 suggesting that MPI owns ownership of the entire issue,
17 but in a measured responsible way built upon good
18 business cases. MPI is not just in the education and
19 awareness business anymore in terms of loss prevention
20 and road safety.

21 They have passed -- as -- as I said
22 before, they've crossed the rubicon. Accordingly,
23 CAC/MSOS would recommend that the PUB find that MPI has
24 not met its onus in demonstrating that the cost expended
25 on road safety are reasonably and prudently incurred, and

1 note, in particular, the failure by MPI to file the
2 independent review of road safety.

3 CAC/MSOS would recommend that M -- would
4 ask the PUB to recommend that MPI begin to employ its
5 costing methodology in resource allocation and, to the
6 degree possible, program evaluation.

7 CAC/MSOS would also propose that the PUB
8 recommend that MPI consider the business case for
9 expanding support for enforcement activities related to
10 occupant restraint and impaired driving. And, of course,
11 included in that consideration should be the risk of
12 moral hazard, the risk that it will be assuming the --
13 the role of other state actors.

14 Mr. Chairman and members of the Board,
15 there's been a lot of discussion on auto theft in this
16 proceeding. I'm not going to take a lot of the Board's
17 time on this area, hopefully about eight (8) to ten (10)
18 minutes of it.

19 Just in terms of the past position of
20 CAC/MSOS, they've consistently argued that there is a
21 good and clear business case for WATSS; W-A-T-S-S.
22 They've also argued in the past that the Corporation's
23 expectations for the Immobilizer Program were, at times,
24 over optimistic based upon what CAC/MSOS considered to be
25 a flawed initial business case.

1 In terms of the auto theft issue as a
2 whole, CAC/MSOS would -- would venture a few
3 observations. No doubt it's a serious issue. We're
4 looking at direct cost to the Corporation in the range of
5 34 million, two (2) to three (3) fatalities estimated on
6 an annual basis.

7 They would also observe from their view --
8 and they might even be a little more optimistic than Mr.
9 Palmer; he suggested it was a bad news -- improving news
10 scenario. The -- CAC would agree with that. It was bad
11 news in '06/'07 in terms of our expectations with that
12 program, but there certainly is better news, almost good
13 news, in terms of '07/'08, and hopefully that will
14 continue.

15 Now, we have to disagree with CAA on one
16 (1) matter, and I hate to disagree with My Friends from
17 CAA in this area. But as I understand the evidence of
18 the Corporation -- I'm certainly subject to correction --
19 I understood Ms. McLaren to say, on Friday, October the
20 5th, that most of the savings for the 2007/2008 year, to
21 date, can be attributed to WATSS. And she made the point
22 that there's still a fifty/fifty (50/50) chance of
23 venturing across a non-immobilized vehicle in Winnipeg.

24 And my clients certainly concur with that
25 statement, and they note that the Corporation suggests

1 its had a very handsome payback in terms of WATSS and the
2 clients concur. They accept that there's been a
3 significant benefit from that program and they applaud
4 the Corporation for -- for encouraging this program.

5 With regard to the Immobilizer Incentive
6 Program, my clients note the rapid pace of the
7 immobilization in '07/'08 and they see that as a positive
8 sign. They also note the evidence of the Corporation, at
9 page 831 of the transcript, that there is not currently a
10 business case for expanding the most-at-risk list. And
11 CAC/MSOS concur with that, and they would respectfully
12 caution both MPI and the PUB about further full funding
13 of -- of other vehicles.

14 CAC/MSOS do note that there's -- in the
15 years 2008/'09 and 2009/2010, there's going to be a lot
16 of attrition in terms of immobilized vehicles from the
17 market; over seven thousand (7,000) vehicles in 2008/'09
18 and over eleven thousand (11,000) in 2009/2010 projected,
19 with the vast majority of those being fully funded
20 vehicles.

21 I think it was established, and the
22 Corporation's been frank about this, that the big impact
23 of the Immobilizer Program is on total theft with some
24 partial impact expected a partial theft.

25 CAC/MSOS do note that even with the

1 anticipated development of the Immobilizer Program, the
2 Corporation is still projecting some pretty big numbers
3 in terms of total theft out in 2011/2012, in the range of
4 14 million annually.

5 And they are also projecting -- and this
6 is at page 818 of the transcript -- that in terms of the
7 attempted theft figure, those numbers are likely to
8 remain relatively high, in the \$8 to \$9 million range,
9 again, out to 2011/2012. And in my clients' view, those
10 numbers are still far too high.

11 My -- my clients also understand -- and
12 this is from the Corporation at page 834 -- that no other
13 jurisdiction is apparently employing an IIP Program, at
14 least to the extent that MPI is. So this suggests to my
15 clients that as we -- we look out beyond 2011/2012, that
16 there are other jurisdictions with serious theft
17 problems, which might be arriving at different solutions
18 in terms of trying to address the -- the total-theft and
19 attempted-theft issue.

20 And so my clients would suggest that --
21 that the Corporation may want to look elsewhere. Now the
22 Corporation didn't seem to agree with my submission on
23 this point. But we'd note for the Board's information --
24 at page 835 of the transcript -- that ICBC has seen quite
25 a significant reduction in total thefts since 2003.

1 They're at a high of twenty-five thousand (25,000) in
2 that year. They're down to about seventeen thousand
3 (17,000) -- still far too high -- in 2006.

4 And my understanding from Ms. McLaren is
5 that they use a much more targeted IIP Program, but also
6 a variety of other measures. And we certainly would --
7 would suggest that there may be something to be learned
8 from these other jurisdictions.

9 The -- the final point that my clients
10 note with concern is that the Extension Program is
11 anticipated to benefit significantly from the IIP
12 without, in current or future years, being asked to
13 contribute to the IIP. And we don't accept the
14 Corporation's rationale for -- for this cross-subsidy of
15 Extension. Other parties have addressed it in a more
16 fulsome way than time permits me today. But our
17 understanding is that the -- the projected benefits to
18 the Corporation Extension Branch from the IIP are in the
19 range of 21 million between '05/'06 and 2013/2014.

20 So from -- in terms of recommendations;
21 CAC/MSOS would recommend that the PUB acknowledge the
22 success of WATSS in controlling claims costs in '07/'08.

23 That MPI be directed to explore and report
24 on anti-theft initiatives in other jurisdictions,
25 particularly ICBC and SGI, with a future review in theft

1 costs. And also that, in terms of the -- to the extent
2 that there are costs being incurred by the Basic Program
3 with regard to IIP, for which the benefit is being reser
4 -- received from the Extension Program, CAC/MSOS would be
5 -- would recommend that this -- that the PUB not take
6 those costs into account in setting the revenue
7 requirement for Manitoba Public Insurance, and if
8 Manitoba Public Insurance wishes to recover those
9 additional costs, that they seek them from Extension.

10 There's one other cross-subsidy issue
11 raised, and I think Board Counsel may have addressed it
12 in some of her comments; certainly Mr. Oakes, and I
13 believe, CAA did as well. CAC/MSOS were probably quiet
14 on this last year when they should not have been -- their
15 concern with the -- the subsidy for interprovincial
16 trucking in the range of 1.8 million annually, which has
17 been going on for some time. And they would recommend,
18 again, that to the extent that the Basic Program is
19 bearing those costs, those costs be excluded from the
20 revenue requirement.

21 Driver Safety Rating. Going back to the
22 days of Mr. Zacharias, this is -- the review of the
23 Bonus/Malus Program has been often requested, often
24 promised and, to date, not delivered. And we note that
25 is a theme that runs through this -- this proceeding.

1 It's not just the DSR that's been delayed.

2 We would submit that the road safety
3 economic metrics have been delayed. We would submit,
4 certainly, that the PIPP review has been delayed, as
5 well. And in terms of driver safety rating, we
6 acknowledge that the Corporation, we're sure, had good
7 intentions.

8 At page 581, Mr. Palmer said:

9 "We still had intended to be faster
10 than we had -- we had been."

11 We would note though that the delay does
12 not seem to be for technological reasons, and we believe
13 that this was confirmed by Mr. Palmer at 890. And he
14 noted on that page, as well, that:

15 "We haven't got the plan set in Order
16 to fully cost it out."

17 CAC/MSOS note with some concern the rise
18 in the projected costs for this program as noted by Board
19 Counsel, in that -- from around 9 million to 12 million.
20 They also note that -- at page 880, and I believe it's
21 887, but about there anyways, my me -- handwriting's
22 getting more messy.

23 There was some concern in terms of -- for
24 the '07/'08 year -- what the Corporation actually was exc
25 -- intending to plan -- planning to spend. There was an

1 initial estimate of 4.9 million and then another of 3.6
2 million. And then, in that discussion, the Corporation
3 appeared to initially back away from the 3.6 million and
4 then re-- rededicate itself to that figure.

5 So there appears to be some ongoing
6 uncertainty with the DSR Program, a program that my
7 clients believe is fundamentally important, which -- but
8 which is moving, certainly from their perspective, slower
9 than they would have liked.

10 From -- my clients certainly will express
11 their regret at the delay that MPI has occasioned on --
12 on this file. We'd recommend that the PUB confirm its
13 expectation that a Hearing in this matter be heard by no
14 later than the -- than midway through the 2009 year.

15 And also that the PUB recommend that the
16 Corporation consult with and seek the input of interested
17 parties prior to filing the revised Bonus/Malus proposal.

18 Just coming to the end of the -- my
19 submissions, Mr. Chairman; three (3) or four (4) specific
20 areas to cover in terms of the revenue requirement of the
21 Corporation. CAC/MSOS have expressed some concerns with
22 the existence of cross-subsidization from the Basic
23 Program to Extension as well as to long-haul truckers.

24 They made the argument, they hope
25 persuasively, that the Corporation has failed to

1 alleviate the doubts about its efficient and effective
2 management of PIPP and of road safety. Other parties,
3 including CAC/MSOS, have made the point that there's
4 considerable conservatism or cushion in the MPI
5 Application.

6 And so CAC/MSOS are going to recommend to
7 the Board that it reduce the Corporation's revenue
8 request by 1 percent with the objective of promoting
9 efficiency and reminding Manitoba Public Insurance of its
10 obligation to prove its case.

11 In terms of the RSR rebate, the --
12 CAC/MSOS know the figure might arguably be higher than
13 49.1 million, but their -- in -- in terms of their
14 position, they -- they felt that the figure of 49.1
15 million is an appropriate balance between protecting
16 future rate stability and also not unduly punishing
17 consumers by keeping too much of their money in the
18 Corporation's pocket.

19 So, in terms of the 49.1 million dollar
20 figure, that's one (1) that they would endorse,
21 recognizing that some may argue for a higher figure.

22 The -- the Corp -- the Board asked a
23 number of questions at page 1074 and 1075 of the
24 transcript. I've attempted to answer many of them, but
25 there's at least three (3) that I -- that I have not to

1 date.

2 Perhaps one (1) of the most con --
3 critical and most challenging relates to question number
4 6: Whether the environmental impacts related to motor
5 vehicles should be taken into account in rate setting for
6 individual vehicle groups or major classes.

7 And I -- as a starting point, and as
8 CAC/MSOS urge -- have urged me to make this as a starting
9 point, they certainly -- it's a Basic consumer right to a
10 safe and healthy environment and that's a -- that
11 principle animates the approach of CAC/MSOS to -- to all
12 proceedings.

13 In terms of the issue of taking
14 environmental impacts into account in -- in terms of rate
15 setting for individual groups and -- and -- or major
16 classes; CAC/MSOS do want to -- I don't know if these are
17 concerns, but they -- they do want to offer some
18 perspective on this -- this issue.

19 Presumably, if one wanted to take
20 environmental principles into account, one could
21 certainly look at the amount that people drive in terms
22 of kilometres driven.

23 Another approach one might take would be
24 to look at the fuel efficiency of the vehicle they chose,
25 although that -- that seems fairly far from -- from

1 insurance principles.

2 In terms of these two (2) possible
3 approaches, CAC/MSOS do want to point out that there may
4 be -- the -- let's say -- if we looked at the issue, for
5 example, of how efficient a vehicle was in terms of fuel
6 efficiency, an approach such as that might unduly punish
7 people who -- who drive older cheaper cars.

8 Those people tend to -- to be of lower
9 income, so there may be some lower income or below
10 average income ramifications of that type of approach.
11 In terms of the issue of perhaps taking a harder more
12 intensive look at the relationship between kilometres
13 driven; certainly that's a -- from the perspective
14 CAC/MSOS -- a more defensible principle.

15 They would point out though that such an
16 approach, if not carefully considered, might have an
17 undue and harsh impact upon those who live in rural
18 Manitoba might have -- and on -- on families, for
19 example, who are busy shuttling their children from event
20 to event. So that -- that's a concern that CAC/MSOS wish
21 to put on the record.

22 They also -- also wish to express the
23 concern that there are barriers in terms of achieving a
24 more sustainable environment and that there are barriers
25 that consumers experience in terms of being able to drive

1 less kilometres in adequate public transit systems --
2 certainly one (1) faced by many seniors.

3 So, what -- what CAC/MSOS wish to rema --
4 argue before the Board that it's important for the
5 consumers to have options before monetary disincentives
6 are put in place. They want to reenforce the
7 significance they -- they put on this issue, but they
8 think we should be working with a carrot first, rather
9 than a stick.

10 That's my clients talking. They did ask
11 me to al -- also provide you with a legal analysis in
12 terms of some of the -- the factors you -- you make take
13 into account. So, whether you want it or not, you'll get
14 the -- the benefit of my informed, or somewhat informed,
15 legal opinion about the -- the Sustainable Development
16 Act.

17 And I've got a four (4) page memo which I
18 won't run through with you; please -- please don't worry
19 about that. It's clear, in reviewing the Sustainable
20 Development Act, that cer -- that it applies to Crown
21 Corporations. And it's certainly clear that a Crown
22 Corporation such as Manitoba Public Insurance is bound by
23 Section 13 and Section 14 of the Sustainable Development
24 Act.

25 They require -- Section 13 requires the

1 Crown Corporation to prepare a Corporate Sustainable
2 Development Code of Practice. Section 14 speaks to the
3 establishment of financial management and procur --
4 procurement guidelines.

5 Dr. Miller, in -- in his discussion of the
6 Sustainable Development Act, also makes reference to the
7 guidelines captured in a -- the -- in an attachment to
8 the Sustainable Development Act.

9 And with the plain and ordinary reading of
10 the legislation, I'm certainly not persuaded that those
11 guidelines apply to Manitoba Public Insurance, that may
12 well be a flaw in the legislation, it may not have been
13 the legislative intent. So the view of CAC/MSOS,
14 certainly as expressed by me, is that Sections 13 and 14
15 apply.

16 In terms of the -- the guidelines found in
17 the attachment, it's not clear and in fact CAC/MSOS would
18 argue that they're not -- they're not directly applicable
19 by virtue of the sustainable development act.

20 As a final note on this point, I would
21 note that under the Crown Corporations Act, the Board is
22 certainly open to it to take other factors into account
23 and certainly, in looking at the overall public interest
24 issues of sustainability, are something that are open to
25 the Board to consider.

1 A couple of other questions posed by the
2 Board: question number 5 was whether the Board should
3 continue to take into account the retained earnings of
4 SRE and Extension. And, certainly, CAC/MSOS believe very
5 strongly that the Board should. The Corporation is very
6 closely integrated trying to, as we've -- and certainly
7 the economic benefits for Extension and, to a lesser
8 extent arguably, SRE flow directly from the strength of
9 the Corporation and Basic.

10 In terms of priorities, certainly CAC/MSOS
11 know that -- note that investment matters -- the
12 Corporation will have a report prepared by that by the
13 end of the next -- of the current fiscal year, so that's
14 something that they would suggest should be high on the
15 regulatory agenda going into the next rate application.

16 From my clients perspective, while the bed
17 may not be burning in terms of PIPP, it's such an
18 important program and there's -- there's so many
19 indications that more could be done and should be done
20 more quickly, that that should be something that is near
21 the top of the Board's agenda.

22 And, as well, from my clients perspective,
23 the issue of loss prevention and road safety, when you
24 think of some where -- in the range of forty (40) people
25 dying in terms of occupant restraint -- not wearing

1 seatbelts -- that's of course a -- a tremendous concern
2 for my client.

3 So that should be a -- a priority from my
4 clients perspective, again, provided that there's a
5 strong business case to be made.

6 And I promised Mr. Galenzoski I would do
7 this, so just in -- in concluding -- and we often do
8 this in -- in proceedings. It's a -- perhaps maybe it's
9 not necessarily a totally adversarial process, but that
10 is part of the -- the debate in -- in these Hearings. I
11 do have some nice things that I -- I should of perhaps
12 said about MPI sooner.

13 Certainly, from a consumer perspective,
14 one-stop shopping for a consumer to be able to go in and
15 license his vehicle -- his or her vehicle and -- and
16 register it on one (1) occasion is certainly a -- a
17 benefit that I think Manitoba consumers have come to
18 appreciate in the past year, and they certainly commend
19 the Corporation for that.

20 The use of -- I'll -- I'll call them
21 treatment metrics; for example, in terms of chiropractic
22 treatments which the Board spoke of -- that's a positive
23 sign in terms of the management of the PIPP program that
24 my clients heartily commend.

25 They also want to note that generally

1 customer service standards are quite high with this
2 Corporation. Number 17's a problem. Hopefully it won't
3 be a problem next year. And next year we probably will
4 explore how these standards may be amended over time,
5 but, generally, the results are -- from a consumer
6 perspective are -- are quite positive.

7 Finally, Mr. Chairman and members of the
8 Board, as -- as my clients reflect upon this proceeding,
9 we think of so much that is yet to be done in terms of
10 Manitoba Public Insurance in the public accessible
11 transparent regulatory process, road safety, PIPP
12 investment, issues of sustainability.

13 My clients concur with Dr. Miller that we
14 should be debating these issues -- these issues sooner
15 rather than later. And it's been a tremendous pleasure,
16 as usual, to appear before the Board. Subject to
17 questions, I will merely state that my clients will be
18 submitting a cost application, and thank the Board for
19 its patience.

20 Thank you.

21 THE CHAIRPERSON: Thank you, Mr.
22 Williams. Mr. McCulloch, would you like to have a bit of
23 time to consolidate your thoughts before we start?

24 MR. KEVIN MCCULLOCH: Mr. Chairman, I'll
25 need at least the half hour that was talked about earlier

1 in these proceedings.

2 THE CHAIRPERSON: Okay, well why don't
3 you let Mr. Saranchuk know when you're ready to begin
4 again, okay.

5 MR. KEVIN MCCULLOCH: Thank you, sir.

6 THE CHAIRPERSON: Mr. McCulloch, just so
7 you're aware, I mean, the Board's quite prepared to take
8 your submission another day. It is your preference.
